ABOUT THE DEMOCRITUS UNIVERSITY OF THRACE

The Democritus University of Thrace was established in 1973 with the Legislative Decree 87/73. It is a public university which was named after Democritus, the ancient philosopher who was born in Avdira, Thrace. The Schools and Departments of the Democritus University of Thrace are located in five Thracian cities: Alexandroupolis, Didymoteicho, Komotini, Orestiada and Xanthi. The Rector's Office of the University is situated in Komotini. Specifically, the Democritus University of Thrace is currently comprised of the following twenty-eight (28) Departments:

Alexandroupolis, Didymoteicho

1. School of Medicine (in Alexandroupolis)
2. Department of Molecular Biology and Genetics (in Alexandroupolis)
3. Department of Primary Education (in Alexandroupolis)
4. Department of Education Sciences in Early Childhood (in Alexandroupolis)
5. Department of Psychology (in Didymoteicho)
6. Department of Nursing (in Alexandroupolis)

Komotini

1. Department of Law
2. Department of Physical Education and Sport Science
3. Department of Economics
4. Department of Social Politics
5. Department of Social Work
6. Department of Political Science
7. Department of Occupational Therapy
8. Department of Humanities Studies

Orestiada

1. Department of Forestry and Management of the Environment and Natural Resources
2. Department of Agricultural Development

Xanthi

1. Department of Civil Engineering
2. Department of Electrical and Computer Engineering
3. Department of Environmental Engineering
4. Department of Architectural Engineering
5. Department of Production and Management Engineering

Drama

1. Department of Forest and Natural Environment Sciences
2. Department of Agricultural Biotechnology and Oenology

Kavala

1. Department of Management Science & Technology
2. Department of Accounting and Finance

3. Department of Computer Science
4. Department of Physics
5. Department of Chemistry

The Departments of the University are organized into Schools as follows:

a) **School of Engineering** situated in Xanthi and comprising the following Departments:

1. Department of Civil Engineering
2. Department of Electrical and Computer Engineering
3. Department of Environmental Engineering
4. Department of Architectural Engineering
5. Department of Production and Management Engineering

b) **School of Education** situated in Alexandroupolis and Didymoteicho and comprising the following Departments:

1. Department of Primary Education (in Alexandroupolis)
2. Department of Education Sciences in Early Childhood (in Alexandroupolis)
3. Department of Psychology (in Didymoteicho)

c) **Faculty of Law** situated in Komotini and comprising the following Department:

1. Department of Law

d) **Faculty of Health Sciences** situated in Alexandroupolis and comprising the following Departments:

1. School of Medicine
2. Department of Molecular Biology and Genetics
3. Department of Nursing

e) **School of Physical Education, Sport Science and Occupational Therapy** situated in Komotini and comprising the following Departments:

1. Department of Physical Education and Sport Science
2. Department of Occupational Therapy (its operation is scheduled to start in 2025-26)

f) **School of Humanities** situated in Komotini and comprising the following Departments:

1. Department of Humanities Studies

g) **School of Social, Political and Economic Sciences** situated in Komotini and comprising the following Departments:

1. Department of Economics
2. Department of Social Politics
3. Department of Social Work
4. Department of Political Science

h) **School of Agricultural and Forestry Sciences** situated in Orestiada and Drama and comprising the following Departments:

1. Department of Agricultural Development (in Orestiada)
2. Department of Forestry and Management of the Environment and Natural Resources (in Orestiada)

3. Department of Forest and Natural Environment Sciences (in Drama)
4. Department of Agricultural Biotechnology and Oenology (in Drama)

i) **School of Science** situated in Kavala and comprising the following Departments:

1. Department of Computer Science
2. Department of Physics
3. Department of Chemistry

j) **School of Management Science and Accounting** situated in Kavala and comprising the following Departments:

1. Department of Accounting and Finance
2. Department of Management Science and Technology

ACADEMIC CALENDAR 2025-26

FALL SEMESTER

Teaching period

From Monday 29-09-2025 to Friday 16-01-2026

Examination period

From Monday 19-01-2026 to Friday 06-02-2026

Holidays

Tuesday 28-10-2025 (National Holiday)

Monday 17-11-2025 (Educational Holiday)

Tuesday 06-01-2026 (National Holiday)

Christmas and New Year's holidays

From Wednesday 24-12-2025 to Tuesday 06-01-2026

SPRING SEMESTER

Teaching period

From Monday 09-02-2026 to Friday 29-05-2026

Examination period

From Monday 01-06-2026 to Friday 19-06-2026

Holidays

Monday 23-02-2026

Wednesday 25-03-2026 (National Holiday)

Friday 01-05-2026 (May Day)

Monday 01-06-2026 (Educational Holiday)

Easter Holidays

From Great Monday 06-04-2026 to Friday 17-04-2026

Local Holidays

Thursday 14-05-2026 (Anniversary of the liberation of Alexandroupolis and Komotini)

Resit examination period (for both semesters)

From Tuesday 01-09-2026 to Friday 18-09-2026

Summer Holidays

From Wednesday 01-07-2026 to Monday 31-08-2026

ABOUT THE DEPARTMENT OF EDUCATION SCIENCES IN EARLY CHILDHOOD

The Department of Education Sciences in Early Childhood opened its doors to receive its first students in 1987 and has been administratively independent since 1992. Throughout these years, it has been extremely active instructing educators who intend to follow careers as teachers or researchers in the area of early childhood education. In this direction, it has developed:

- An undergraduate (Ptychio/Bachelor) program which provides the basic up-to-date scientific knowledge in the areas of the pedagogy, methodology, psychology, anthropology, philosophy, literature, music, theatrical education, aesthetic education, science education, environmental education, mathematics education, statistics, computing and foreign language learning. The duration of the undergraduate studies is four years. During the fourth year of their studies, students are given the opportunity to prepare a dissertation with the aim of being introduced to scientific research in the area of early childhood education. The undergraduate program includes an Internship which offers students the opportunity to develop skills and become familiar with methods of working with young children. The program also cultivates the cross-curricular thematic approach of the learning process and the effectuation of educational activity plans, creativity and practice in matters of assessment and self-assessment. This correlation of theory with actual practice has already proven successful in kindergartens, day care centers, museums, children's libraries as well as in the sensitive area of hospital care and education of young children.
- An Inter-Departmental Post-Graduate Program ("Socio-cultural Education and Training of Animators") that operated from 1/1/2003 until the academic year 2010-11.
- The Post-Graduate Program in "Innovative Pedagogical Approaches in Multicultural Educational Environments" that started to operate in the spring semester of the academic year 2013-14. The last candidates were accepted in the academic year 2017-18.
- The Post-Graduate Program in "Education for the Environment and Sustainability" that started to operate in the fall semester of the academic year 2015-16. The last candidates were accepted in the academic year 2017-18.
- The Post-Graduate Program in "Education Sciences: Innovative Pedagogical Approaches in Multicultural Educational Environments" that started to operate in the fall semester of the academic year 2019-20. The last candidates were accepted in the academic year 2021-22.
- A new Master's Degree Program "Education Sciences: Intercultural Pedagogical Approaches and Innovative Applications in Multicultural Educational Environments" that has not been established yet.
- Doctoral studies.

The above are supported by educational and research activities of the faculty and students, such as the guidance of doctorate dissertations, the organization of lectures and conferences, the participation in scientific meetings, the planning and publication of education materials

and assessment testing tools, the organization of cultural/educational activities, etc. in a continuous effort of scientific presence and mutual action with local, national and European organizations that focus on early childhood education and relevant areas of research.

Department Administration

Head of the Department: Antonios Sapountzis, Professor

Vice-Head of the Department: Alexandros Theodoridis, Associate Professor

End of term: August 31, 2028

Laboratories

Officially, the Department has four laboratories that have been established with Presidential Decrees and are in use:

- **Laboratory of Child Psychology**

Director, A. Sapountzis, Professor

- **Laboratory of Environmental Research and Communication and Environmental Education**

- **Laboratory of Informatics**

Director, D. Prentzas, Associate Professor

- **Laboratory of Pedagogical Research and Educational Practice**

Director, K. Karadimitriou, Associate Professor

The following laboratories are also in use in order to facilitate the instructional and research needs of the Department:

- **Laboratory of Foreign Languages**

- **Laboratory of Fine Arts and Educational Material**

- **Videoconferencing Room (jointly used with the Department of Primary Education)**

University Library

The relative needs of of the Department are met by the School of Educational Sciences library which offers:

- Lending Department
- Magazine Section
- Computer Department
- Reading room, and
- Space for organizing the material

The Central Library of the Democritus University website (<http://lib.duth.gr/>), offers access to various online services (Online databases, access to the Hellenlink Greek Academic Libraries Network, interlibrary loan service, etc.)

DEPARTMENT STAFF

Department Faculty

Professors	
Demetra Evangelou	Pedagogy and Educational Applications
Antonios Sapountzis	Social Psychology
Associate Professors	
Vasiliki Brouskeli	Health Psychology
Sophie Iakovidou	Modern Greek Literature
Konstantinos Karadimitriou	Pedagogy and Applications in Education
Eleni Lipourli	Cognitive and Language Development
Georgios Mavrommatis	Intercultural and Minority Education
Efthymia Penderi	Social Pedagogy and Applications in Early Childhood Education
Dimitrios Prentzas	Informatics, Software Systems and Applications
Alexandros Theodoridis	Philosophical Anthropology and Education
Assistant Professors	
Ivi Daskalaki	Anthropology of Education
Anna Klothou	Mathematics Education in Early Childhood
Lydia Mitits	Applied Linguistics: Bilingualism and Education
Maria (Maretta) Sidiropoulou	Reading and Writing: Teaching Approaches and Applications
Nikolaos Zarkadis	Science Teaching and Learning in Early Childhood

Emeritus Professors

Professors

Anastasia Economidou	Literature for Children
Galini Rekalidou	Pedagogy and Applications in Education

Collaborating Faculty of other Departments (DUTH)

Antonios Kambas	Professor, Department of Physical Education and Sport Science
Athanasios Karafyllis	Professor, Department of Primary Education

Athanasios Koutsoklenis	Associate Professor, Department of Primary Education
Athanasios Mogias	Associate Professor, Department of Primary Education
Aspasia Serdari	Associate Professor, Department of Medicine

Specialized Educational Staff

Evangelia Kopsalidou	Music Education
Myrsini Lantzouraki	Theatrical Education
Marianna Pavlidou	Aesthetic Education
Maria Ammari	English Language

Specialized Laboratory and Teaching Staff

Ekaterini Gioftsalis	Pedagogy and Practicum
Ioulia Ntousi	Pedagogy and Practicum
Efthymia Papanastasiou	Pedagogy and Practicum

Specialized Technical and Laboratory Staff

Panagiota Athanasiou
Maria Chatzisavvas
Zoe Dalouka

Buildings of the School of Education Sciences in Alexandroupolis

The two Departments of the School of Education Sciences in Alexandroupolis, namely the Department of Education Sciences in Early Childhood and the Department of Primary Education, share three buildings in Nea Chili.

BUILDING A (New Building)

Ground floor: Department Secretariat, Offices of Staff

1st floor: Offices of Faculty Members, Meeting/conference room (shared with the Department of Primary Education)

Basement: Teaching Room (shared with the Department of Primary Education)

BUILDING B (Old Building, Western Aisle)

Offices of Faculty Members, Laboratory of Environmental Research and Communication and Environmental Education

BUILDING B (Old Building, Eastern Aisle)

Ground floor: Library of School of Education Sciences

1st floor: Office of Educational Material – Special Library, Laboratory of Informatics, Laboratory of Pedagogical Research and Educational Practice, Offices of Faculty Members, Teaching rooms, Teaching Room for Foreign Languages (shared with the Department of Primary Education), Office of Foreign Language Teaching Staff.

BUILDING D (PROKAT)

Videoconferencing Room (shared with the Department of Primary Education)

Laboratory of Child Psychology

Teaching Room (shared with the Department of Primary Education)

BUILDING C

Ground floor

Karatheodoris Amphitheater (shared with the Department of Primary Education)

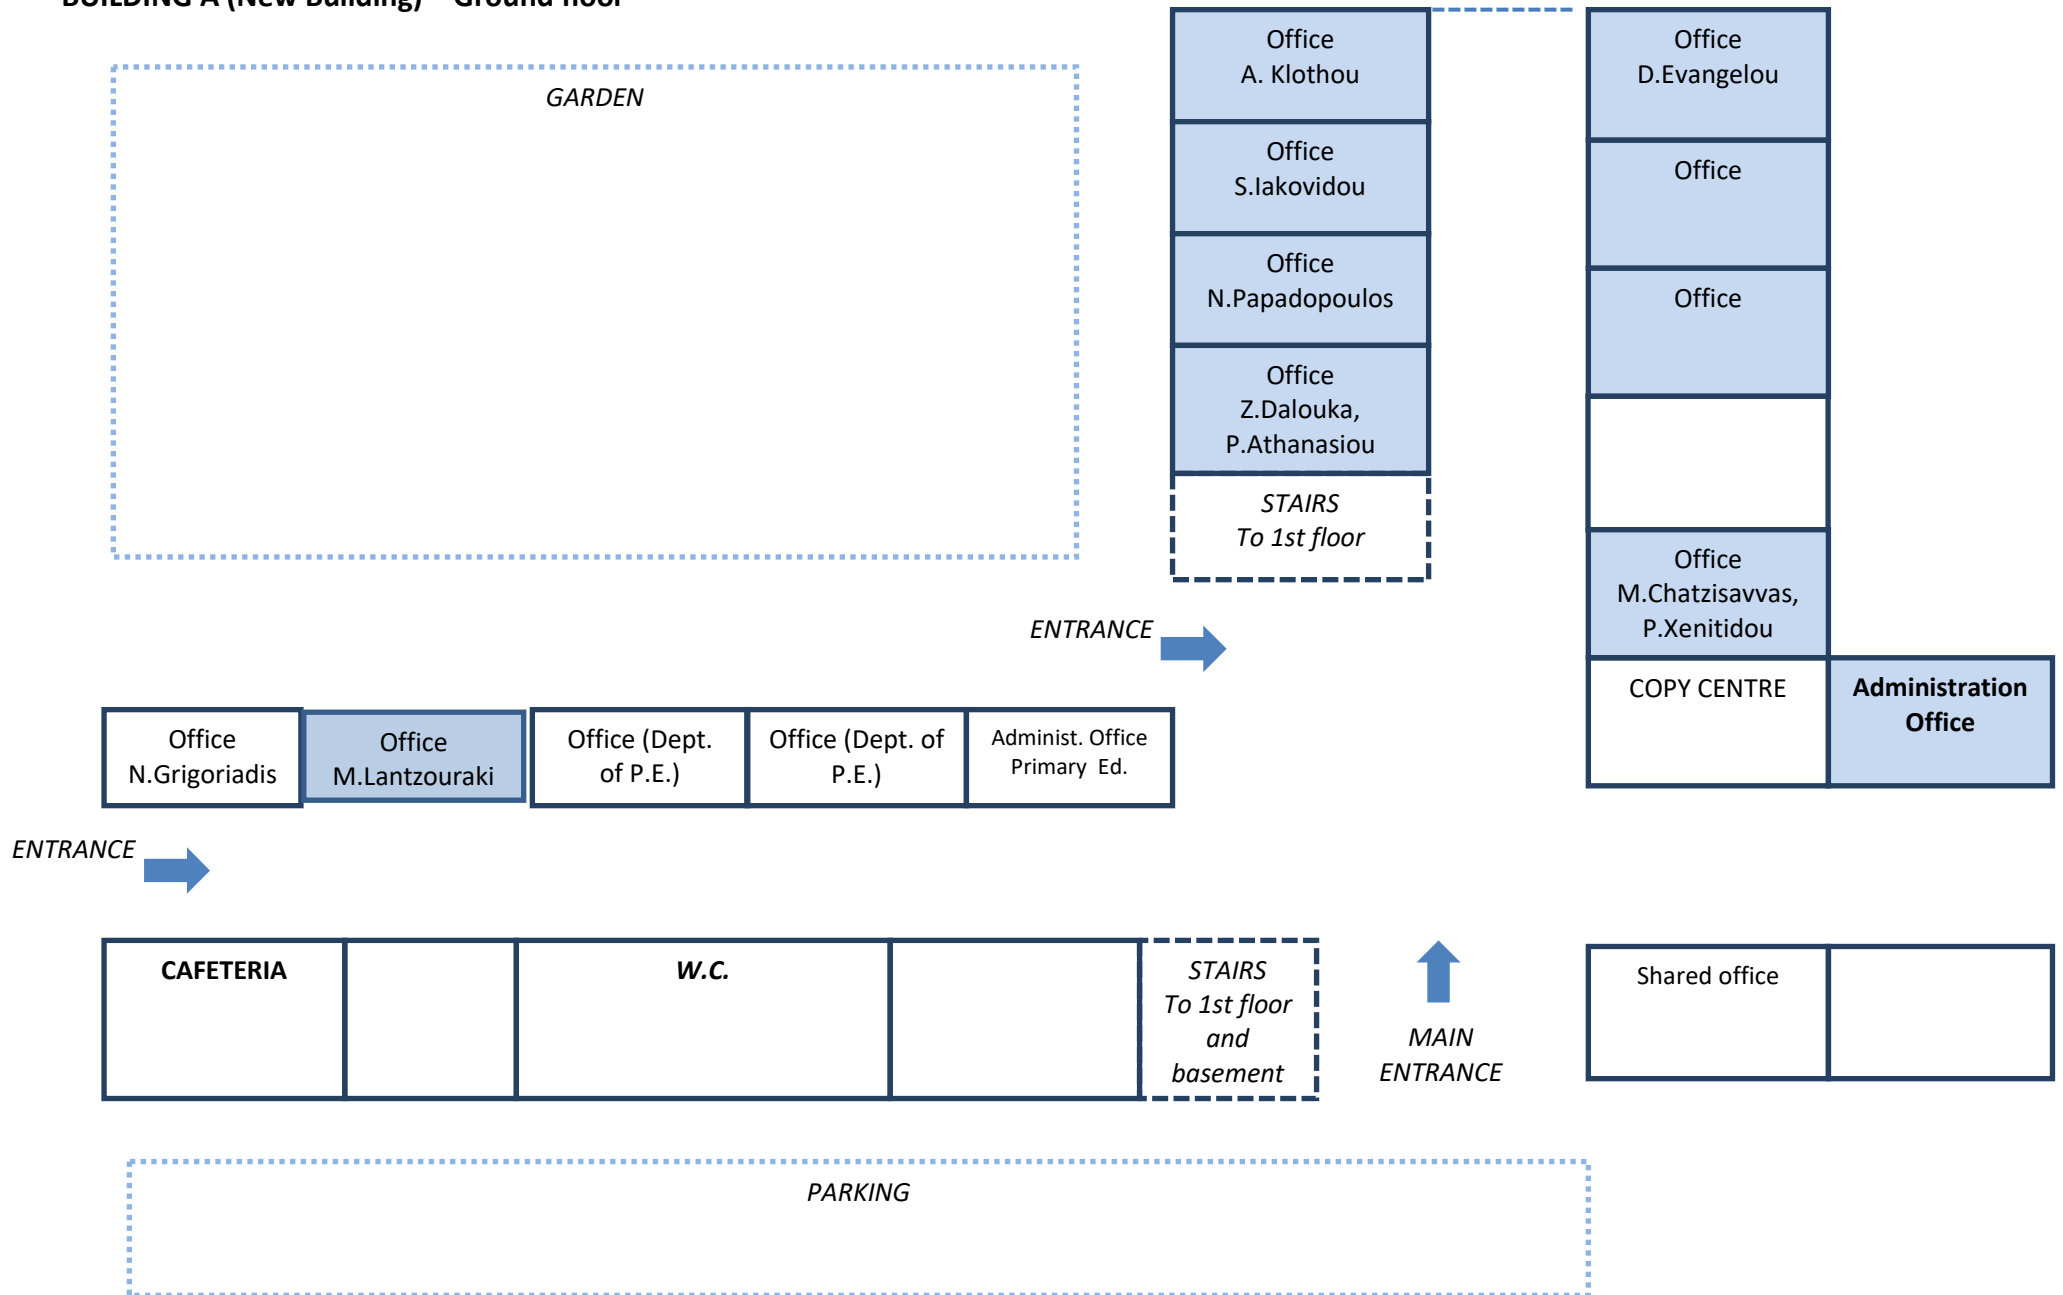

Restaurant (shared with all Department of Alexandroupolis)

1st floor

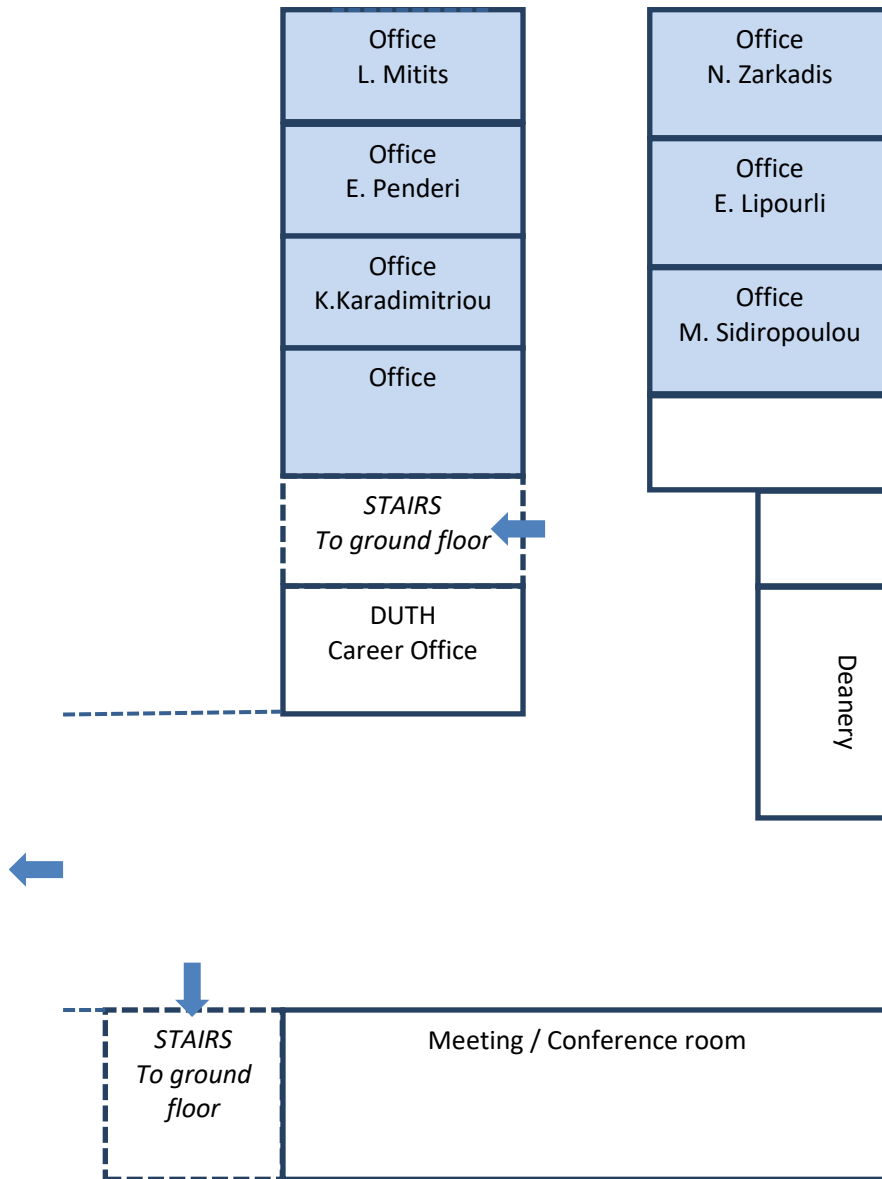

Laboratory of Fine Arts and Educational Material (shared with the Department of Primary Education)

Room of Practicum Workshops

BUILDING A (New Building) – Ground floor

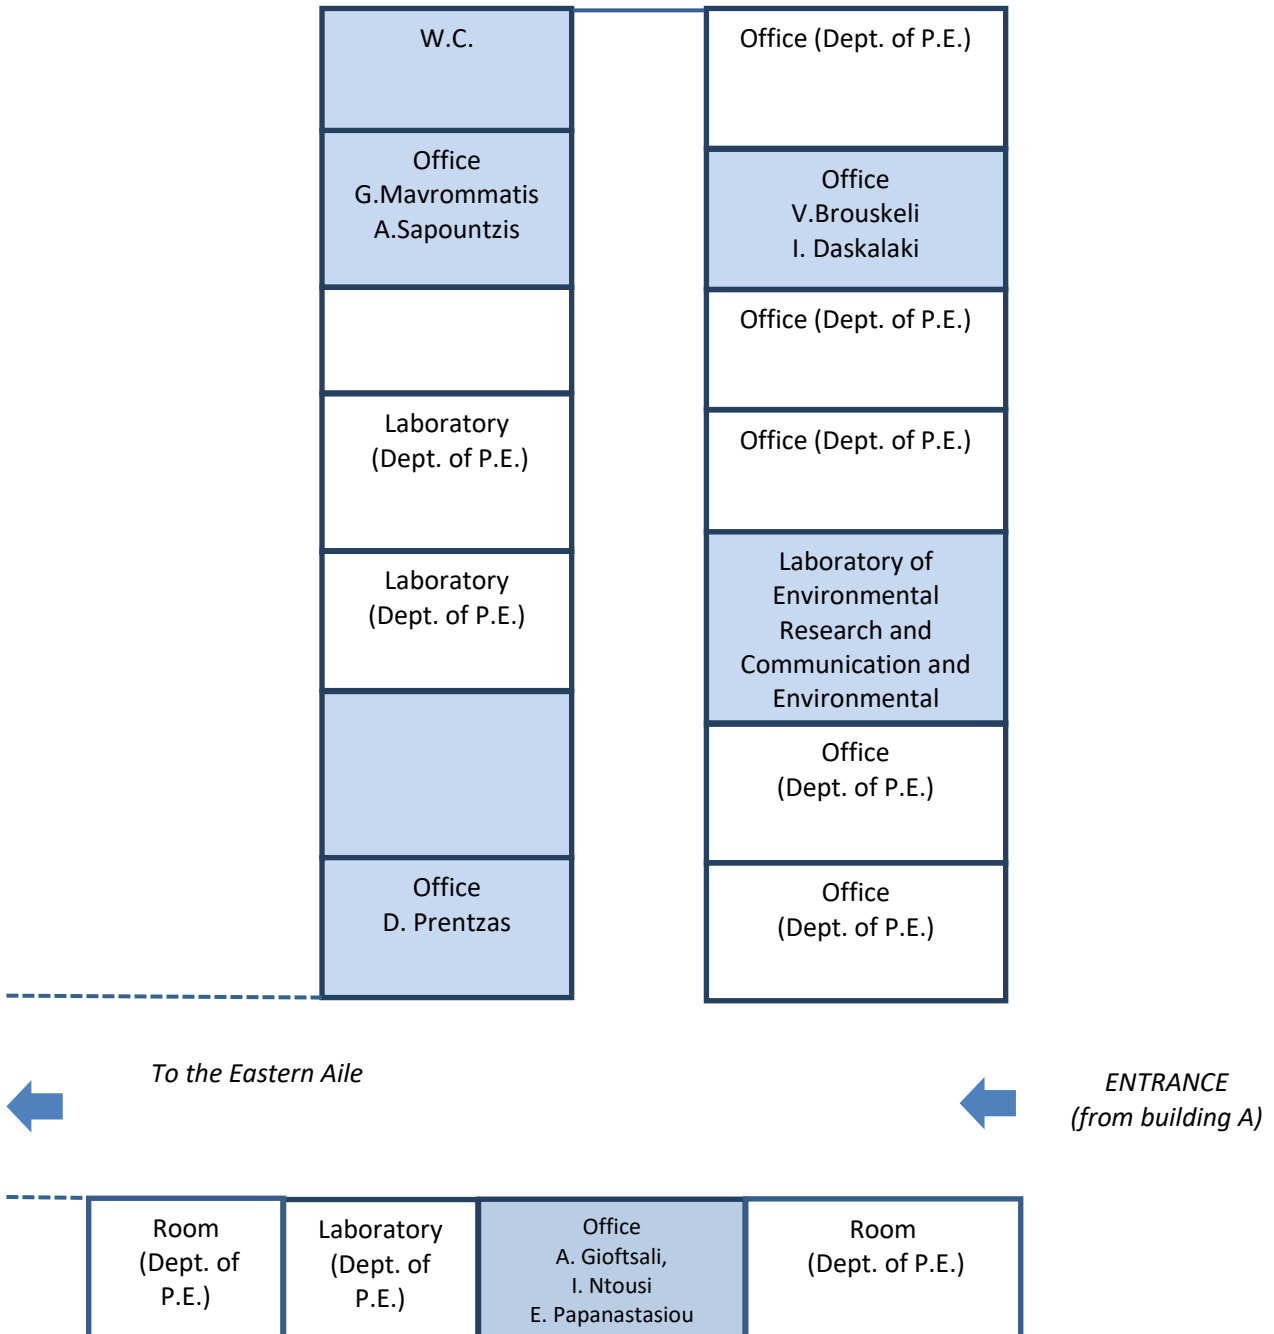

BUILDING A (New Building) – 1st floor

BUILDING B (Old Building)

Ground floor (Western Aisle)

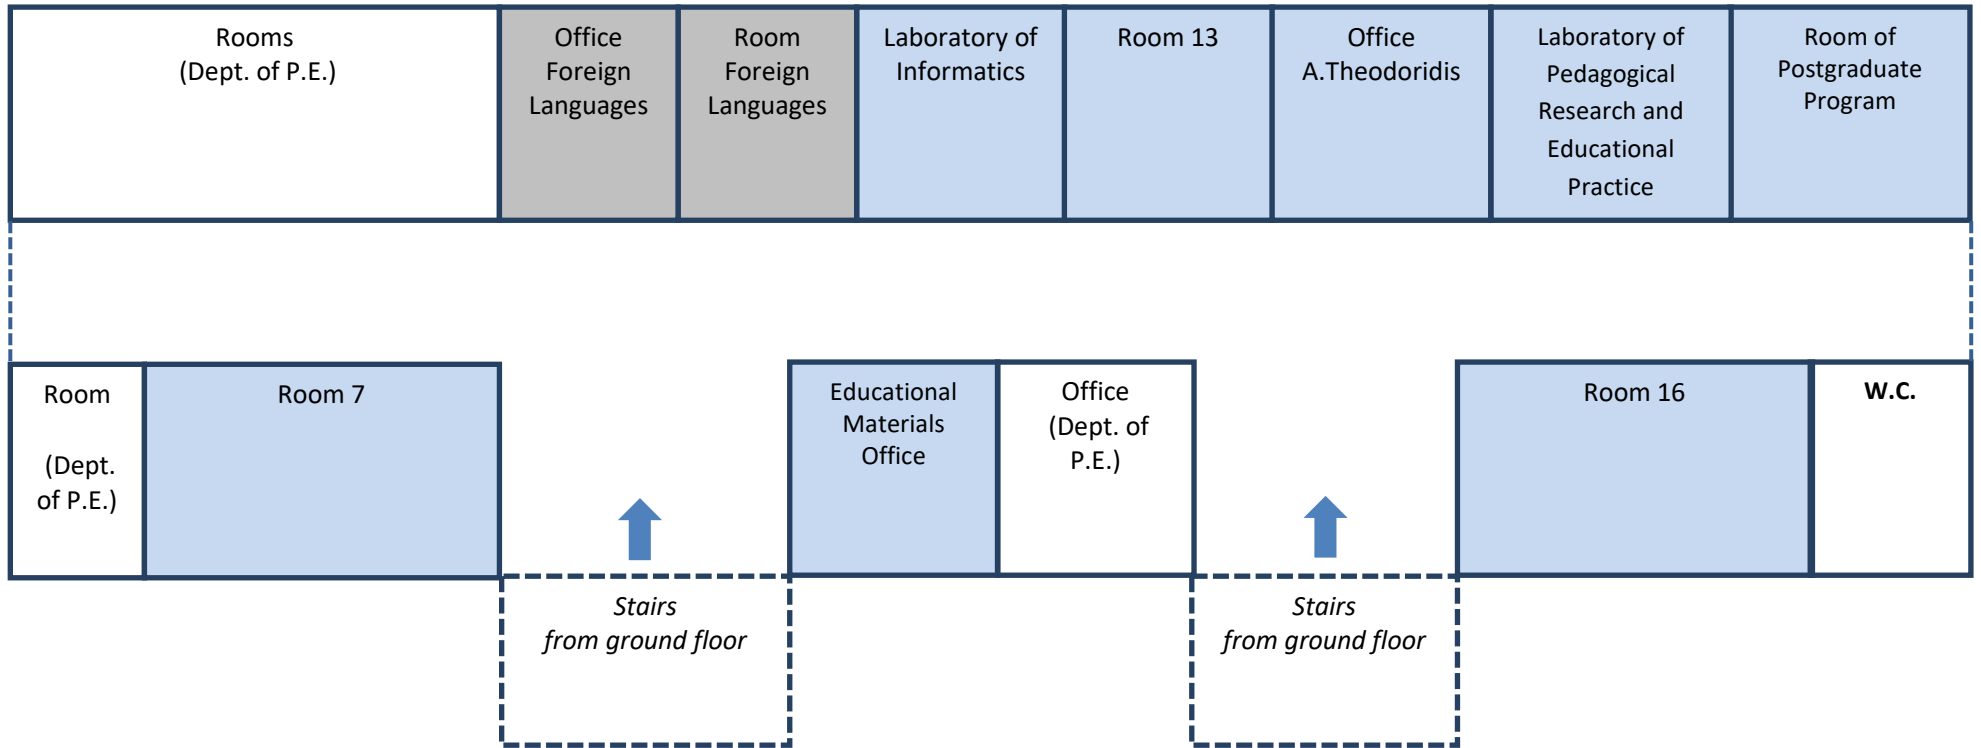

Ground floor (Eastern Aisle)

Library
Stairs to the 1st floor

Building B (Old Building)

1st floor

PROGRAM OF UNDERGRADUATE STUDIES

The Undergraduate Degree in Education Sciences in Early Childhood requires four years of studies. The academic year begins on September 1 of each year and ends on 31 August of the following year. Each academic year is divided in two semesters (fall and spring). Each semester consists of at least 13 weeks of classes and usually three weeks of examinations.

In the academic year 2025-26, two parallel programs of study are in place: (a) the curriculum for admissions for the academic year 2023-24 onwards; and (b) the curriculum for admissions from the academic year 2017-18 up to the academic year 2022-23. Relevant information is available on the Department's website (www.psed.duth.gr).

Credit Units, Types of Courses, Dissertation, Diploma Supplement

Each course in the curriculum corresponds to **credit units**. The credits correspond to the teaching hours per week during the semester. Credits represent students' workload during the semester in successfully following the course and achieving the corresponding learning outcomes under the **European Credit Transfer and Accumulation System (ECTS)**. Workload is the result of attending lectures, tutorials and workshops, self study, work, examinations, etc. Each credit unit corresponds to a workload of 25-30 hours during the semester. According to the ECTS specifications, the total number of credits per semester is 30. The total number of credits for the four years of study at the Department is 240. During the four years of study, the student may accumulate additional credits (over 240) by successfully attending optional courses offered in the curriculum.

The curriculum includes **compulsory courses, elective courses, optional courses and compulsory modules of Internship**. In order to obtain the degree, each student is required to successfully attend all compulsory courses and each compulsory module of the Internship. In addition, each student is required to successfully select and attend some of the elective courses offered. Optional courses are not a prerequisite for obtaining the degree, but grades and their respective credit units are included for the students who will attend them and are listed in the Diploma Supplement that they will receive upon graduation.

Students have the option to prepare a dissertation in their fourth year of study if they so wish. If they do not prepare a dissertation, they will have to successfully attend three additional elective courses. In addition, foreign language courses (English, French) are offered. The teaching of French courses is subject to the availability of a corresponding tutor.

Upon graduation, apart from their Bachelor's Degree, students receive the Diploma Supplement. The Diploma Supplement based on the ECTS specifications is an accompanying and explanatory document describing the general curriculum of each graduate's degree. It is published in Greek and English and includes among others the list of courses attended by the graduate.

Learning Outcomes of the Undergraduate Studies

Upon successful completion of the studies, the graduates acquire the necessary scientific knowledge, skills and competences on the field of Education Sciences in Early Childhood and have the opportunity to pursue their professional development. They will be able to:

- Construct a broad humanitarian education capable of critically interpreting the contemporary challenges.
- Understand and interpret scientific theories and concepts from the field of education sciences and effectively transfer and apply them in early childhood education settings.
- Understand a variety of factors that contribute to the social and educational reality.
- Apply educational practices and methods that have as a focal point the child's holistic development, its personal rhythms and its perspectives of integration in the cultural environment.
- Design, implement and evaluate innovative educational programmes (curricula) in institutional and alternative early childhood educational areas and self-evaluate themselves.
- Direct and manage early childhood institutions.
- Design and implement programmes for the internal evaluation of educational units.

According to the Presidential Decree 320/83, the holder of the Undergraduate Degree in Education Sciences in Early Childhood can work as a teacher in public and private kindergartens. In addition, they can be employed in a broad range of related social institutions.

Academic Counselor of Undergraduate Studies

The Faculty members act as academic counselors for undergraduate students. Each academic year, each freshman is assigned to a Faculty member who will act as the academic counselor through the individual's undergraduate studies. The academic counselor chooses how to approach and assist the

students assigned to him/her. The academic counselor informs, gives advice and assists students during their studies.

The assignment of students to Faculty members is done randomly. The distribution of this assignment is even. In case an academic counselor is absent for a long time period (e.g., sabbatical leave, health issues), the General Assembly temporarily assigns the corresponding students to other Faculty members.

The Department has approved a regulation for the academic counselor which is available on the website of the Department. Further details about the institution of the academic counselor is available in the specific regulation (in Greek). This regulation is based on a corresponding draft regulation approved by the Democritus University of Thrace.

The Department applies the institution of the academic counselor since the academic year 2019-20. In previous years, a committee of student affairs operated in the Department consisting of one to two Faculty members for each one of the four year of studies.

Organizational Aspects

For organizational purposes, the curriculum is presented as follows:

- ♣ The **Analytical Program of Studies** in which the Studies have been organized in groups based on their scientific subject.
- ♣ The **Indicative Program of Studies**, which includes the distribution of the courses in the eight semesters of full-time study, as well as the teaching hours of the courses with the corresponding credit units. This indicates the scientifically logical course of studies.
- ♣ The **Programme of Offered Courses** for the current academic year, which includes the actual distribution of the courses taught in the eight semesters of full-time study, the required hours of teaching for each course per week and the corresponding credit units.

The compulsory, elective and optional course codes contain the letter "Y", "E" and "Π" respectively as the final character. The Analytical and Indicative Curriculum includes optionally elective courses that may not be taught by the Faculty staff of the Department during the current academic year. The cells corresponding to these courses are indicated by gray shading in the tables on the Analytical and Indicative Curriculum.

Finally, in Appendix I, the Course Outlines are presented, detailing the learning objectives, the content, the evaluation methods and the bibliography of each course. Course curricula have been drafted based on a relevant template outline available on the website of the Hellenic Quality Assurance & Accreditation Agency (HQA).

Analytical Program of Studies (for Admissions from 2023-24)

It includes the titles of compulsory courses (Y) and elective courses (E) with their characteristic code. Courses based on their scientific subject have been organized in groups as follows:

Subject group	Number of Compulsory Courses	Number of Elective Courses
Philosophical, Sociological, Anthropological and Historical Approaches to Education (K)	4	17
Psychology (Ψ)	6	13
Pedagogics – Didactics (Δ)	9	12
Culture and Education (Π)	6	17
Sciences (Θ)	6	8
Methodology (M)	1	1
Foreign Languages (Ξ)	2	6
Programme of Internship (A)	4	-

Note: Students are taught compulsory modules of the Internship Programme in the four years of study.

Philosophical, Sociological, Anthropological and Historical Approaches to Education (K)		Semester
K 16 Y	Introduction to Philosophy	1
K 17 Y	Philosophy of Education (Paideia)	8
K 24 Y	Intercultural Education	4

Categorization of the Courses of the Program of Studies according to Thematic Units

The courses of the Undergraduate Program of Studies have been organized in groups in the Analytical Program of Studies based on their scientific subject. The course may be also grouped cross-sectionally based on thematic units or the interests of the students. Below are tables in which the courses are grouped according to the following thematic units:

- (1) Inclusion and Intercultural dimensions of education
- (2) Utilization of non-formal and informal forms of education
- (3) Sensory-motor and development through music and movement
- (4) Development and learning issues
- (5) New technologies in education
- (6) Language, reading and childhood
- (7) Pedagogical thinking and educational practice
- (8) Basic scientific theory
- (9) Childhood in sciences
- (10) Entrepreneurship, creativity and innovation

Analytical Program of Studies (for Admissions from 2017-18 up to 2022-23)

It includes the titles of compulsory courses (Y), elective courses (E) and optional courses with their characteristic code. Courses based on their scientific subject have been organized in groups as follows:

Subject group	Number of Compulsory Courses	Number of Elective Courses	Number of Optional Courses
Philosophical, Sociological, Anthropological and Historical Approaches to Education (K)	5	15	-
Psychology (Ψ)	6	13	-
Pedagogics – Didactics (Δ)	7	15	-
Culture and Education (Π)	4	17	-
Sciences (Θ)	7	7	-
Methodology (M)	1	1	-
Foreign Languages (Ξ)	1	2	1

Note: Students are taught compulsory modules of the Programme Practicum Training throughout the 8 semesters of study.

Philosophical, Sociological, Anthropological and Historical Approaches to Education (K)		Semester
K 04 Y	Sociology of Education I: Social and Educational Inequalities (admissions until 2020-21)	3
K 04 Y	Social and Educational Inequalities (admissions 2021-22)	3
K 16 Y	Introduction to Philosophy	1
K 17 Y	Philosophy of Education (Paideia)	8
K 20 Y	Modern Greek History	1
K 24 Y	Intercultural Education	4
K 43 Y	Anthropology of Education	3
K 01 E	History of Modern Greek Education	8
K 05 E	School-Community Relations	6
K 07 E	Modern and Contemporary History of European Society	3
K 13 E	Gendered Identities and Education	7
K 19 E	Contemporary Philosophical Anthropology	7
K 21 E	History of Childhood	4
K 25 E	Religion and Education in Multicultural Societies	7
K 27 E	Social Organizations and Crisis Management	6
K 30 E	Educational Innovation and Entrepreneurship	8
K 32 E	Texts of Philosophical – Pedagogical Reflection	4
K 40 E	Anthropological Approaches to Reading	7
K 41 E	Visual Literacy	8
K 42 E	Anthropological Approaches of Kinship and Family	8
K 44 E	Sociological and Anthropological Approaches to Childhood	5
K 46 E	The Muslim Minority of Thrace: History and Education	7

Psychology (Ψ)		Semester
Ψ 02 Y	Cognitive Psychology	2
Ψ 03 Y	Psychology of Child Development I	1
Ψ 04 Y	Psychology of Child Development II	2
Ψ 06 Y	Social Psychology	6
Ψ 14 Y	Health Psychology	4
Ψ 35 Y	Educational Psychology	3
Ψ 23 E	Intergroup Relations in Social Psychology	7
Ψ 24 E	Topics in Cross-Cultural Social Psychology	8
Ψ 28 E	Child and Life Events	6
Ψ 32 E	Sexuality and Health	5
Ψ 33 E	Communication and Language Development	6
Ψ 34 E	Evaluation and Support of Children with Special Educational Needs	8
Ψ 35 E	Child Psychopathology	8
Ψ 36 E	Motives, Self-regulation and Learning	7
Ψ 37 E	Special Topics on Cognitive Psychology	5
Ψ 38 E	Practical Applications of Educational Psychology: Designing Effective Learning Environments	7
Ψ 39 E	Experimental Psychology: Theoretical and Methodological Approaches	5
Ψ 40 E	School Bullying and Victimization: Interpretation and Interventions	8
Ψ 41 E	Psychosocial Issues in Early Childhood and School Age: Prevention and Treatment	8

Pedagogy - Didactics (Δ)		Semester
Δ 01 Y	Introduction to the Sciences of Education	1
Δ 02 Y	Current Educational Directions	5
Δ 04 Y	Evaluation: Theoretical Approaches and Applications in Education	4
Δ 06 Y	Contemporary Didactics: Basic Notions and Application Proposals	3

Internship Programme

1. The aims of the Internship Programme

The Internship Programme aims to provide the knowledge and development of skills considered necessary for the future educator who will be working with young children in formal and non-formal educational contexts. For students admitted from the academic year 2023-24, the overall program is developed in 5 semesters (1st, 2nd, 3rd and 4th year of study).

2. Framework, requirements and procedures for the Internship Programme

2.1. During the first two years of study, students attend:

- Seminars that allow them to explore and document place, space and materiality in the kindergarten and prepare for the organization and implementation of activities within it.
- Courses and seminars through which they acquire knowledge and skills in order to be able to design and implement educational programs in kindergartens as well as in alternative training places during the following semesters.

2.2. During the 6th semester of studies, students plan, implement and evaluate a daily program in kindergartens with the application of the Lesson Study model. Students also organize and implement a short-term sociopedagogical intervention in a non-formal educational setting (such as museum, center of creative activity, library, etc.) in groups.

In the 4th year (7th - 8th semester) the compulsory internship program lasts one month and may take place in kindergartens, multicultural kindergartens (and in some cases paediatric hospital clinics). Public kindergartens are designated by the Ministry of Education. Students' practicum in hospitals lasts one week and is part of the programme implemented for children with "special needs". Students who choose to instigate their practicum in these places are first interviewed. The final selection is defined by the Interview Committee taking into consideration specific requirements (e.g., prerequisite courses) and the student's responsibility and consistency, as well as the general characteristics and the formation of his/her personality.

3. Content of the Thematic Units of the Internship Programme

For students admitted since 2017-18, the outlines for all semesters including units of the Internship are available in the Appendix. For students admitted until 2016-17, the description of the units of the

Internship is available in the Guides of the previous academic years.

Operating rules for the Programme of Internship

1. The days and times of courses, seminars and workshops are pre-defined and listed in the special program of each semester.
2. At the beginning of each semester, students receive a Practical Training Form, which is updated throughout the semester.
3. To obtain a bachelor's degree the successful participation of the students in all the activities of the Internship Programme is required.
4. Participation in all the modules of the Programme, as well as in the Internship is compulsory for all students without exception. The permissible number of absences in each section is mentioned in detail in the analytical Internship Programme Schedule. If the number of absences is exceeded, the student is excluded from the module examinations. Arrangements may be made by the Internship Programme Committee in the case of illness, for which the student must provide a medical opinion justifying the student's absence for the date of the course. Possible arrangements for absences due to force majeure or serious illness (or death) of a relative in the 1st degree will be decided by the Internship Programme Committee, at the request of the student. It is essential that the application be accompanied by relevant supporting documents.
5. In the Internship and related modules students are assessed and graded by the instructor on the grade scale applicable to the current curriculum. The final grade of the student for each semester is calculated from the weighted average of the grades in each module.
6. Students who are unsuccessful in a module have the opportunity to take part in the recurrent examination periods.
7. Students must attend the kindergartens or other places of practice during the date and time specified in the six-month curriculum. Alternative dates or areas of internship may be possible after consultation with the Internship Programme Committee.
8. In the context of the Internship, each student has the following obligations:
 - To cooperate with the instructor or supervisor in charge of the planning and implementing the program to be carried out.
 - At the end of each semester students submit the Internship training file with:
 - i. Internship Training Form of the semester.
 - ii. Records, work, preparation protocols, and programme plans.
 - iii. A representative sample of the material used or produced, their description as well as samples of the work of the children.
9. The above file is supplemented by: (a) the papers and the protocols or evaluation reports per module of the program prepared by the supervisors of the practical training programme and the student's self-assessment sheets.
10. The file of the Internship programme will be returned to the student upon receipt of his / her

degree.

11. Prior to their departure, students taking part in the Erasmus program, are required to contact the Erasmus Supervisor responsible of the department in order to obtain information and guidance on their Internship Obligations.

12. For lessons and theory seminars, the supervisor determines the means and the time of assessment (during specific examination dates or during time frames of the course or seminar). Instructors in the Internship Programme must state both in writing and verbally to the students and to the Internship Programme Secretary the means and the time of assessment for the seminars or lessons taught.

POSTGRADUATE PROGRAMMES

Postgraduate Programme (MSc): “Education Sciences: Innovative Pedagogical Approaches in Multicultural Educational Environments” (Since academic year: 2019-20)

The Postgraduate Programme “Education Sciences: Innovative Pedagogical Approaches in Multicultural Educational Environments” started to operate at the Department of Education Sciences in Early Childhood in the Winter Semester of the academic year 2019-20. The program no longer accepts students for enrollment. The last students enrolled in the academic year 2021-22.

The maximum number of postgraduate students enrolled per year is thirty (30). The Postgraduate Programme requires the compulsory attendance of all courses, seminars and workshops, the implementation of a practicum, as well as the completion of a postgraduate research project (Dissertation). The total duration of the programme is four (4) semesters. Degree Awarded: Master Specialization Degree.

The students can choose between one of the two available directions/specializations:

- Formal, non formal and informal forms of education
- Education for the intercultural competence

The Program of Studies includes:

First semester	Four (4) modules, three (3) common core modules for both directions and one (1) from two (2) optional modules	30 ECTS
Second semester	Five (5) modules for each direction	30 ECTS
Total 1 st year	Nine (9) modules	60 ECTS

Third semester	Seminars, courses, workshops and the Postgraduate Practicum Placement	30 ECTS
Fourth semester	Diploma Dissertation	30 ECTS
Total 2nd year	Modules, Postgraduate Practicum Placement & Dissertation	60 ECTS

Director of the Programme:

Konstantinos Karadimitriou, Associate Professor

Deputy Director of the Programme:

Georgios Mavrommatis, Associate Professor

Postgraduate Programme (MSc): “Innovative Pedagogical Approaches in Multicultural Educational Environments” (From the academic year 2013-14 until 2021-22)

The Postgraduate Programme “Innovative Pedagogical Approaches in Multicultural Educational Environments” has been operating at the Department of Education Sciences in Early Childhood since the Spring Semester of academic year 2013-14. The last students enrolled in the academic year 2017-18. The operation of the Postgraduate Programme ended in January 2022. It was replaced by the Postgraduate Programme “Education Sciences: Innovative Pedagogical Approaches in Multicultural Educational Environments”.

The maximum number of postgraduate students enrolled per year is twenty eight (28). The Postgraduate Programme requires the compulsory attendance of all courses, seminars and workshops, the implementation of a practicum, as well as the completion of a postgraduate research project (Dissertation). The total duration of the programme is four (4) semesters. Degree Awarded: Master Specialization Degree.

The students can chose between one of the two available directions/specializations:

- Formal, non formal and informal forms of education
- Education for the intercultural competence

The Program of Studies includes:

First semester	Four (4) modules, three (3) common core modules for both directions and one (1) from two (2) optional modules	30 ECTS
Second semester	Five (5) modules for each direction	30 ECTS
Total 1 st year	Nine (9) modules	60 ECTS

Third semester	Seminars, courses, workshops and the Postgraduate Practicum Placement	30 ECTS
Fourth semester	Diploma Dissertation	30 ECTS
Total 2nd year	Modules, Postgraduate Practicum Placement & Dissertation	60 ECTS

Postgraduate Programme (MSc): “Education for the Environment and Sustainability” (From the academic year 2015-16 until 2023-24)

The Postgraduate Programme “Education for the Environment and Sustainability” has been operating at the Department of Education Sciences in Early Childhood since the academic year 2015-16. There will be no new candidates. The last students enrolled in the academic year 2017-18. The operation of the Postgraduate Programme ends in October 2023.

The program aims to develop competent scientists in Education for the environment and sustainability, providing interdisciplinary perspectives and analytical tools for the comprehensive understanding of the social and cultural dimensions of environmental quality. The program provides students with knowledge and skills to gain a holistic view of sustainability in order to be able to promote environmental education, environmental research and development strategies towards sustainable environmental management and to promote the idea of sustainability and sustainable development in formal and non-formal education, for public and private sector associations and related organizations as well.

The postgraduate program admits up to twenty (20) postgraduate students each academic year. It requires the compulsory attendance of all courses, seminars and workshops, as well as the completion of a postgraduate research project (Dissertation). The total duration of the programme is four (4) semesters. The program is divided in four (4) academic semesters and is based on the ECTS credit accumulation mode of study, requiring upon completion of 120 ECTS credits, equally distributed per semester as follows:

First (A) semester	Four (4) modules	30 ECTS
Second (B) semester	Four (4) modules	30 ECTS
Total 1 st year	Eight (8) modules	60 ECTS

Third (C) semester	Two (2) seminars	30 ECTS
Fourth (D) semester	Postgraduate Dissertation	30 ECTS
Total 2 nd year	Seminars & Dissertation	60 ECTS

The program is offered in (a) in person teaching and (b) distance teaching via synchronous (i.e. through open-source web-conferencing systems) and asynchronous eLearning methods (i.e. supported by the Open e-class platform).

Director of the Programme: Alexandros Theodoridis, Associate Professor

Inter-Departmental Master's Degree Program "Socio-cultural Education and Training of Animators" (From the academic year 2003-04 until 2010-11)

Socio-cultural education and training of animators

Direction A: Social and Cultural Education

Direction B: Supportive Early Childhood Education

The Inter-Departmental Master's Degree Program "Socio-cultural Education and Training of Animators" was implemented by the Department of Education Sciences in Early Childhood in collaboration with the Department of Philosophy – Pedagogy – Psychology of the National Kapodistrian University of Athens and the Department of Education Sciences in Early Childhood and Educational Design of the University of the Aegean.

Until 2008, the Master's Degree Program was co -financed by the Ministry of National Education and Religion and the European Union as part of the actions of the "New Programs of Post – Graduate Studies".

The Master's Degree Program operated in Alexandroupolis from the academic year 2003-04 until the academic year 2010-11. It accepted enrollments from the academic year 2003-04 until the academic year 2007-08. The maximum number of postgraduate students enrolled per year was twenty-five (25). The Postgraduate Programme required the compulsory attendance of all courses, seminars and workshops, the implementation of a practicum, as well as the completion of a postgraduate research project (Dissertation). The total duration of the programme was four (4) semesters. The Post-Graduate Program awarded, after the successful completion of the relative cycles of studies the Master's Degree of Educator Specialization in the general area of "Social – cultural Education and Training of Animators" in one of the following directions: a) "Social and Cultural Education" and (b) "Supportive Early Childhood Education".

The main aims of the Program were the following:

- (a) The specialization of the graduates of the Sciences of Education or of graduates of other equivalent University Institutions of theoretical direction (pedagogical, psychological, social) in the modern methods and techniques of preparing inspirers with the aim of contributing to the effective education and support of children of pre-school age in social-cultural matters so that they will be able to deal adequately with the educational needs in the public and private sector, in the Organizations of the wider public sector of the country as well as of other countries of the European Union or outside it.
- (b) The in-depth training of scientists so that they will be able to produce new knowledge.

The Program of Studies included:

- a) Main Courses (5)
- b) Direction Courses (5)
- c) Practicum – Design, application and assessment of the educational/cultural program.
- d) Writing of the presentation for the Practicum
- e) Writing of the Thesis
- f) Participation in the Parallel Program of Seminars, Lectures, Laboratories, Conferences.

The main courses aimed at the: a) deep understanding of the knowledge which is necessary for the design and carrying out of research in the area of education, b) widening of knowledge for the use of new technologies for teaching purposes, c) correlation of individual characteristics which become involved in the learning through the social processes and d) learning of the methods and techniques of animating.

The direction courses provided certain knowledge for the development of programs of sensitization in matters of: functioning of the thought process, unity of cognitive and emotional function, health, multiculturalism, environment, state institutions, etc.

Director of the Programme:

Loukia Beze, Professor, Dept. of Education Sciences in Early Childhood, Democritus University of Thrace

Scientific Coordinator for the National Kapodistrian University of Athens:

Elias Bezebegis, Professor, Department of Philosophy – Pedagogy – Psychology

Scientific Coordinator for the University of Aegean:

Maria Kaila, Professor, Department of Education Sciences in Early Childhood and Educational Design

LIFELONG LEARNING PROGRAMME / ERASMUS +

1. General information

The LLP/ ERASMUS+ program was founded under the auspices of the European Union in order to promote the collaboration of the member states in the field of Education. It pertains to higher/university education.

The aims of the LLP/ ERASMUS+ Program are:

- The improvement of the quality of the Higher Education which is provided in the member states
- The enhancement of the "European Dimension" of the Higher Education.

2. Bilateral Agreements of the Department of Education Sciences in Early Childhood

For the current academic year, the Department of Education Sciences in Early Childhood of the Democritus University of Thrace has signed bilateral agreements for the exchange of students and members of the faculty and of research personnel with the following universities:

Country	University	Student Mobility (NR.STUDENTS x months)	Additional Information
Bulgaria	Sofia University St. Kliment Ohridski		
	University of Veliko Turnovo St. Cyril and St. Methodius	2 X 5	https://www.uni-vt.bg/

COURSE OUTLINES

Psychology (Ψ)

(Ψ 02 Y) Cognitive Psychology

Instructor: Eleni Lipourli, Associate Professor

COURSE OUTLINE

(1) GENERAL

SCHOOL	School of Education Sciences		
ACADEMIC UNIT	Department of Education Sciences in Early Childhood		
LEVEL OF STUDIES	Undergraduate – 1 st Cycle of studies		
COURSE CODE	Ψ 02 Y	SEMESTER	2nd
COURSE TITLE	Cognitive Psychology		
INDEPENDENT TEACHING ACTIVITIES		WEEKLY TEACHING HOURS	CREDITS
	Lectures	3	4.5
COURSE TYPE	Scientific Knowledge		
PREREQUISITE COURSES:	X		
LANGUAGE OF INSTRUCTION and EXAMINATIONS:	Greek		
IS THE COURSE OFFERED TO ERASMUS STUDENTS	Yes		
COURSE WEBSITE (URL)			

(2) LEARNING OUTCOMES

Learning outcomes
<p>After completing the course, students will be able to:</p> <ol style="list-style-type: none"> 1) recognize the various areas of research that are the subject of Cognitive Psychology. 2) Explain the basic concepts and research methods used in Cognitive Psychology 3) Explain basic theoretical approaches that have been proposed on human understanding and its relation to behavior. 4) Explain important empirical findings on basic cognitive processes (e.g., perception, memory, problem solving, decision making, language)
General Competences
<ul style="list-style-type: none"> • Understanding and interpreting scientific theories and concepts • Research, analyze and synthesize data and information, • Autonomous work • Critical Thinking

(3) SYLLABUS

An introductory course to Cognitive Psychology. It will introduce students to fundamental mental processes, such as

- Perception (sensory functions, visual and auditory perception),
- Attention (selective attention, automatic and controlled attention, etc.),
- Memory (Information processing theory, levels of processing, working memory, theories of remembering and forgetting, etc.),
- Thought (representation of knowledge, problem solving, decision making, executive functions, etc.) and
- Language (structure and functions of language, relation language-thought).

More specifically, the methodologies by which these processes are investigated, as well as the most important theoretical frameworks and research results will be discussed.

(2) LEARNING OUTCOMES

Learning outcomes
Students upon successful completion of the course will be able to:
<ol style="list-style-type: none"> 1) Acknowledge the interaction of biological and environmental factors to development 2) Explain the basic principles and concepts of developmental psychology 3) Describe the methods for the study of developmental changes 4) Analyze the principal theoretical approaches of child development 5) Describe the developmental characteristics of the developmental periods from prenatal to early school age.
General Competences
<ul style="list-style-type: none"> • Understanding and interpretation of scientific theories and concepts of Child Development

- Transfer of psychological concepts to the field of preschool education
- Understanding of the multiple factors that interact to produce developmental change
- Search for, analysis and synthesis of information relevant to the psychology of child development.
- Working independently

(3) SYLLABUS

This course explores the field of developmental psychology beginning with the prenatal and continuing through early childhood period. The basic principles of human development, the research methods, the fundamental theories and major findings from contemporary research are presented throughout the course. The presentation of the specific subjects follows a thematic approach, i.e. several different aspects of development including physical, cognitive, social and emotional development are discussed.

Indicative sections of the course:

- Child and his psychological study (the meaning of childhood – historical review of study of the child – objectives and aspects of child psychology).
- Research methodology and techniques in child development (observation, clinical approach, experimental approach)
- The role of developmental theories
- Prenatal period
- Infancy and toddlerhood (sensory-motor, cognitive, socio-emotional development)

(2) LEARNING OUTCOMES

Learning outcomes
<p>Students upon successful completion of the course will be able to:</p> <ol style="list-style-type: none"> 1) explain the methods and techniques that are used for the study of mental processes in early development. 2) describe, analyse and compare the main theoretical approaches of cognitive and language development. 3) describe the developmental course of typically developing children with an emphasis in their cognitive and language development. 4) explain the ways in which developmental theories and models affect the educational practice.

General Competences
<ul style="list-style-type: none"> • Understanding and comparison of scientific theories and concepts of cognitive and language development • Transfer of psychological concepts to the field of preschool education • Understanding of the multiple factors that interact to produce developmental change • Search for, analysis and synthesis of information relevant to the psychology of child development. • Critical thinking

(3) SYLLABUS

<p>This course introduces students to early Cognitive and Language Development. More specifically, it focuses on the development of basic mental processes during the early years of life, on the most important theories of cognitive development and on the methodological approaches and techniques that have been devised for investigating mental processes in infants and toddlers. Recent empirical results on multiple facets of cognitive development will be discussed, namely on: neurological development during the first years of life, perceptual development (visual, auditory, tactile, etc.), memory development (developments in declarative memory, working memory, long term and autobiographical memory / childhood amnesia), conceptual development (representation of knowledge and concept formation) and communicative and linguistic development (prelinguistic communication, phonological development, emergence of early words, vocabulary and grammar development).</p>

(3) SYLLABUS

This course focuses on how social psychology has examined the issue of intergroup relations across time. The basic theories of intergroup relations are presented from the beginning of the discipline to the most recent developments in the field. Particular attention is paid on how social psychology has approached the issue of prejudice and racism. In addition, the notion of stereotypes in social psychology is examined while there is also reference to theories that aim to reduce prejudice and intergroup conflict.

General Competences
<ul style="list-style-type: none"> • Understanding and interpretation of the scientific theories and concepts in Health Psychology • Using of the scientific concepts in places of education, • Applying of good practices and methodologies targeting in the holistic child development.

(3) SYLLABUS**Lesson's Contents:**

This course focuses on the connection between health and sexuality, with an emphasis on the connection between mental health and sexuality, with the ultimate goal of highlighting the need for scientifically documented and pedagogically sensitive interventions in the school setting. Basic psychological theories related to health behaviors and sexuality are presented in order to understand the psychological and socio-cognitive mechanisms that influence individuals' attitudes and choices.

In addition, the following are examined and discussed:

- the psychosocial development of childhood and adolescent sexuality,
- issues of prevention and recognition of sexual abuse,
- the objectives of educational interventions on sexuality and health,
- the principles of designing comprehensive sexuality education programs,
- the characteristics of successful interventions, the difficulties that may arise during their implementation, and the special role of educators.

(2) LEARNING OUTCOMES

Learning outcomes
<p>Students upon successful completion of the course will be able to:</p> <ol style="list-style-type: none"> 1) Explain the different theories which have been proposed to explain language development and its relationship with cognition / thought. 2) Distinguish between the various levels of communicative – language development (non-verbal, phonological, semantic, pragmatic, vocabulary, morphosyntactic and narrative development). 3) Describe the developmental course of communication and language 4) Explain the main characteristics of the most important language impairments. 5) Use basic methods for screening young children for language impairments. 6) Search independently for bibliography concerning a topic of language development or impairment of their interest. 7) Synthesize, argument and present (in written and orally) the recent findings and theoretical discussions concerning this topic.
General Competences
<ul style="list-style-type: none"> • Understanding and comparison of scientific theories and concepts of

communication and language development

- Transfer to the field of preschool education
- Search for, analysis and synthesis of information
- Independent and team work
- Critical thinking

(3) SYLLABUS

This course will focus on the early communication and language development of children during the preschool and early school years. It will provide students with knowledge on the contemporary research methods, as well as the most recent empirical results concerning the emergence and development of various dimensions of linguistic knowledge (e.g., the transition from preverbal to linguistic communication, phonological development, lexical, morphosyntactic and pragmatic development, development of narratives, etc.). In parallel, it will focus on the developmental milestones which are considered important indices for the distinction between 'typically' and 'atypically' developing populations. Finally, the importance of an early detection of possible deviations or delays in language development, as well as the role of the early years teacher in the process of linguistic evaluation will be discussed.

(2) LEARNING OUTCOMES

Learning outcomes
After a successful completion of the course students will be able to: 1) distinguish the deviations from the normal development 2) identify dysfunctional and maladaptive behavior of children in family and school context 3) describe the main features of the more frequent mental disorders in preschool children 4) develop a common "language of communication" with mental health experts
General Competences
<ul style="list-style-type: none"> • Understanding scientific theories and concepts in a school context • Showing social and professional responsibility and sensitivity to mental health issues • Respect for diversity and multiculturalism

(3) SYLLABUS

<p>The course aims to familiarize students with the common mental disorders of children, especially in preschool and primary school age. It emphasizes to the clinical features of autism, mental retardation, ADHD and learning disorders, anxiety disorders, eating and sleeping problems, etc.</p> <p>The course is also related to issues of Social Child and Adolescent Psychiatry such as abuse and neglect, bereavement, divorce, adoption and the impact of chronic diseases</p>
--

in the psycho-emotional development of children.

(2) OBJECTIVES

Learning outcomes
<p>The central objective of the course is to understand the psychological principles governing the learning process, the learning environment and teaching.</p> <p>By completing the course, students should be able to:</p> <ul style="list-style-type: none"> • Examine, comment and discuss theories and research findings in the field of educational psychology. • Determine the connection between the theories of learning and educational practice. • Understand, explain and discuss the effects of individual differences (e.g., intelligence, personality, etc.) in learning. • Develop the necessary attitudes for efficiently responding to students' individual differences. • Understand the interaction between teacher and student behavior and evaluate the impact that the classroom psychological climate of has on learning. • Understand the basic theories of learning motivation. • Understand the psychology of the educator. • Find solutions to problems related to learning, teaching and student behavior, based on the principles of psychology.

General Competences

Acquisition of knowledge, critical thinking and problem solving skills, on issues related to the learning and teaching of students aged 6-12 years, and to the psychology of learning, teaching and education.

(3) COURSE CONTENT

- Meaning and definition of Educational Psychology.
- Research methods in Educational Psychology.
- Learning theories and practical applications.
- Students' individual differences (intelligence, creativity, self-efficacy beliefs, self-concept) learning.
- Learning motivation and educational practice.
- Psychological classroom climate and school performance.
- Class management. Efficient learning environments.
- Psychology of teaching with emphasis on the psychology of education.

(4) TEACHING and LEARNING METHODS

DELIVERY	<ul style="list-style-type: none"> • Face-to-face/lecture. • Group discussions, film screening, invited talks, case studies.

LANGUAGE OF INSTRUCTION and EXAMINATIONS	Greek		
IS THE COURSE OFFERED TO ERASMUS STUDENTS	Yes		
COURSE WEBSITE (URL)			

(2) OBJECTIVES

Learning outcomes
After successfully completing the course, students are expected to: 1) Describe and compare basic theoretical approaches to self-regulated learning 2) Identify the main aspects of self-regulated learning 3) Describe the conditions that promote self-regulated learning in the context of the school and the family 4) Propose ways of promoting self-regulated learning in early childhood 5) Organize, analyze and compose modern theoretical and research data
General Competences
-Comprehension and interpretation of scientific theories and concepts -Application of knowledge in the educational process -Comprehension of the various factors that shape the learning behavior of children -Search for, analysis and composition of data and information with the use of technological tools -Autonomous and group work -Critical thought

(3) COURSE CONTENT

The course aims to acquaint students with the recent research work in psychology and its potential applications in the context of young children's education. More specifically, recent topics from international literature will be presented regarding: (a) the evolving ability of young children to self-regularize their behavior and to engage actively in the learning

process, (b) the relation between self-regulation and motives in this early development period, (c) the importance of motives and metacognitive processes in learning and educational success in early childhood, (d) the conditions that promote self-regulated learning in the context of the school and the family, (e) the ways of evaluating motives, metacognitive skills and self-regulation skills of young children during the learning process. In the context of the course, students will be asked to participate actively with the study of relevant bibliography, small-scale research studies and presentations in classroom.

IS THE COURSE OFFERED TO ERASMUS STUDENTS	Yes		
COURSE WEBSITE (URL)			

(2) OBJECTIVES

Learning outcomes
After successfully completing the course, students are expected to: 1) Explain in depth the theoretical approaches that have been proposed for the processes of memory, thought and language. 2) Compare various theoretical approaches and identify their critical differences. 3) Analyze recent findings about the aforementioned cognitive processes. 4) Compare the methodological approaches used in the study of the aforementioned processes and explain their limitations.
General Competences
-Comprehension and interpretation of scientific theories and concepts -Search for, analysis and composition of data and information -Autonomous and group work -Critical thought

(3) COURSE CONTENT

The course involves the cognitive processes of memory, thought and language. More specifically, the following will be presented thoroughly: (1) the operations and mechanisms of memory (coding, storage, retrieval, organization, oblivion), (2) the operations and mechanisms of thought (categorization, organization of concepts, conceptual change, reasoning, logical faults and bias, problem solving, decision making), and (3) the mechanisms of linguistic processing (production and comprehension). The main theoretical models that have been proposed for the interpretation of

these cognitive operations and main methodological approaches to their study will be presented and compared.

(2) LEARNING OUTCOMES

Learning outcomes
After completing the course, students will be able to: <ul style="list-style-type: none"> • Explain the principles of organizing effective learning environments • Discuss ways of establishing and applying rules • Describe and determine the internalizing and externalizing difficulties of psychosocial

adjustment of preschool children

- Describe, analyse and compare theories and practices of behavioural difficulties effective management
- Recognize and understand ways of developing social and emotional competence among preschool children
- Describe methods of self-esteem enhancement
- Discuss developmentally appropriate practices of social skills promotion
- Recognize the importance of interpersonal relationships among preschool children and describe conflict management strategies
- Discuss practices to promote communication between teachers and parents.

General Competences

- Research, analyze and synthesize data and information
- Autonomous and group work
- Decision making
- Acquisition of knowledge, critical thinking and problem solving skills on issues related to preschool children learning and teaching
- Application of theoretical knowledge in the field of preschool education
- Respect of diversity
- Criticizing
- Promotion of free, creative and inductive thinking

(3) SYLLABUS

The aim of the course is to describe ways of designing effective learning environments and to focus on practical applications of Educational Psychology in the preschool classroom. The principles for designing and maintaining an effective learning environment will be introduced and strategies for establishing rules and organizing classroom procedures will be described. Then, possible difficulties of psychosocial adjustment of preschool children will be analyzed in detail and their distinction into internalized and externalized behavior will be attempted. In the next sections of the course, a) the behavioral and person-centered approaches of behavioral difficulties management in the classroom will be presented and b) specific practices to reinforce functional behaviors in the school context will be discussed. The socio-emotional development of preschool children and developmentally appropriate strategies for promoting social and emotional adequacy will be presented. Further, the self-concept will be analyzed, methods of boosting self-esteem will be described, potential difficulties in students' interpersonal relationships will be presented and conflict management strategies will be discussed. Finally, issues related to effective school and family communication and collaboration will be addressed.

- 1) Basic principles of designing an effective learning environment
- 2) Rules establishment in the classroom
- 3) Psychosocial adaptation difficulties in the school environment I
- 4) Psychosocial adaptation difficulties in the school environment II
- 5) Behavior management approaches and strategies in class I

- 6) Behavior management approaches and strategies in class II
- 7) Emotions – Emotion Management
- 8) Self-concept, self-esteem – Self-esteem enhancement
- 9) Social competence – Social skills
- 10) Interpersonal relationships in the school environment
- 11) School and family communication
- 12) Presentations and discussion
- 13) Presentations and discussion

(2) LEARNING OUTCOMES

Learning outcomes
Students upon successful completion of the course will be able to:
1) Define the underlying cognitive and developmental mechanisms of specific dimensions of memory, perception, thought and language.
2) Explain the different theoretical and methodological approaches in their study.
3) Explain the methodological principles underlying experimental designs and techniques used in the study of mental processes.
4) Form hypotheses and select an adequate methodology for their investigation.

- 5) Propose an experimental design for the verification of a particular hypothesis.
6) Implement a small-scale experimental study.

General Competences

- Understanding and interpretation of scientific theories and concepts of Experimental Psychology
- Design, implementation and evaluation of an experimental design
- Search for, analysis and synthesis of information with use of necessary technologies
- Decision making
- Working independently
- Working in group
- Production of novel ideas
- Design and administration of small-scale research projects
- Critical thinking
- Promotion of creative and inductive thinking

(3) SYLLABUS

The aim of this course is to introduce students to the principal methods used in the study of the mental processes. By presenting a variety of experimental studies, students will be presented with the contemporary theories and the most recent findings concerning selected topics in the fields of perception, memory, thought and language.

Particular emphasis will be given to experimental methods as well as to the use of relevant tools and techniques. Finally, students will learn how to design an experimental study applying adequate criteria for the selection of the appropriate methodological approach and to implement a small-scale study in a topic of their interest.

(2) LEARNING OUTCOMES

Learning outcomes
After completing the course, students will be able to: (1) understand the evolution of education institutions in relation to Modern Greek urbanism and the needs of the modern Greek state (2) to interpret each educational reality in relation to the social, economic and political contexts of each era.
General Competences
Understanding the various historical factors that influence the evolutionary course of the educational process in the Greek state Exercise of critical competence through the comparison of the present with the historical

past on the basis of education and the social connotations of the specific institution.

(3) SYLLABUS

The first part of this course examines issues such as the condition of education in the first decades following the instauration of the Greek state, the applied educational methods and their representatives, the educational reforms during the 20th century and their protagonists, and finally the primary problems of modern Greek education. In the second part of the course, early childhood education is examined as it developed in the beginning of the 20th century within Greece and outside (Greek diaspora communities), along with the didactic practices applied in Greek early childhood at the time. The historical context of the particular period and its peculiarities are brought forth and are explained, offering ways of understanding the adaptation of didactics methods (inter-teaching/didactics F. Froebel) in early childhood, as well as the development of Greek early childhood education in general. Methodologically, the course is based exclusively on primary sources, representative exemplifications are presented of “nursery schools”, use is made of particular didactic methods and of time table applications etc., all enriched with transparencies representative of the Greek early childhood education of the examined period.

(2) LEARNING OUTCOMES

Learning outcomes
<p>After successful completion of the course, students will be able to:</p> <ol style="list-style-type: none"> 1) Approach the science of Sociology and the science of Sociology of Education 2) Develop sociological approaches to education 3) Identify the various manifestations of social inequalities 4) Understand the importance of the institution of education as a tool for the reproduction of social inequalities as well as a provider of social mobility 5) Document –through modern literature- the evolution of the social phenomena found in educational contexts
General Competences
<ul style="list-style-type: none"> • Understanding and interpretation of the scientific theories and concepts in the field of didactics • Scientific concepts in pre-school childcare facilities • Understanding the various factors that co-form social and educational reality. • Working in an international environment

- Working in an interdisciplinary environment
- Exercise on criticism and self-criticism
- Promote free, creative and inductive thinking
- Respect to the differentiation and the multiculturalism
- Demonstrate social, professional and ethical responsibility and gender awareness

(3) SYLLABUS

The aim of the course is to introduce students to the approach of Sociology science and in particular to the science of Sociology of Education. The course includes analyses of the educational system through theoretical-ideological approaches about the social role of functional education, marxism and the interpretive approach - New Sociology of Education. It also aims to identify inequalities and discrimination in education and link them directly with the economic and social role of the state in managing integration and solidarity policies.

The course is as follows:

1. Sociology and Sociology of Education

- Definition and subject of Sociology and Sociology of Education
- Important aspects of sociological thought

2. Institutionalization of Education: from ecclesiastical education to national educational systems

3. Sociological approaches to education

- Functional approach
- Marxist view
- Interpretive approach-New Sociology of Education (Phenomenology, Ethnomethodology, Symbolic Interaction)

4. Education and social structures

- Organization and change of education systems
- Basic functions of education (socialization, legalization and reproduction, distribution of professional posts)

5. Inequality and discrimination in education

- Social origin and education
- Cultural capital of the family
- Gender and discrimination in education
- Language as an element of inequality

6. Sociological approach to School Failure / Success

- The social role of teachers
- The myth of intelligence
- Technology in education

7. Research in social sciences

- Action research and reflection on social and educational issues

(K 05 E) School-Community Relations

Instructor: Ivi Daskalaki, Assistant Professor

COURSE OUTLINE**(1) GENERAL**

SCHOOL	School of Education Sciences		
ACADEMIC UNIT	Department of Education Sciences in Early Childhood		
LEVEL OF STUDIES	Undergraduate Program		
COURSE CODE	K05E	SEMESTER	6 th
COURSE TITLE	School-Community Relations		
INDEPENDENT TEACHING ACTIVITIES	WEEKLY TEACHING HOURS	CREDITS	
	3	4.5	
COURSE TYPE	Scientific knowledge		
PREREQUISITE COURSES:			
LANGUAGE OF INSTRUCTION and EXAMINATIONS:	Greek		
IS THE COURSE OFFERED TO ERASMUS STUDENTS	YES		
COURSE WEBSITE (URL)	Eclass		

(2) LEARNING OUTCOMES

Learning outcomes
<p>After completing the course, students will be able to:</p> <ol style="list-style-type: none"> 1) critically evaluate the applied educational research 2) familiarize with relevant epistemological debates, theoretical and methodological approaches 3) identify theoretical concepts in the study of the relations between actors of the school system (students, parents, teachers, etc.) and local communities and in actions of tackling practical problems in education in the context of local communities 4) become familiar with the ways in which applied educational and anthropological research works at the micro-level of everyday life <u>with</u> communities to solve educational issues
General Competences
The course aims to introduce students to theoretical concepts and methodological approaches related to the interaction between school and communities as well as problem-solving practices related to education in a local context.

(3) SYLLABUS

The course critically focuses on applied educational research approaches in order to analyze the relationship between school and "community". Recognizing the importance of broader socio-political phenomena and processes that take place at a global level (e.g. population movements within and outside national borders, multicultural approaches to education, etc.), the course focuses on specific methods of solving educational problems that arise in the context of local communities. The course places particular emphasis on ethnographic examples that demonstrate the methods and practices by which applied anthropology works at the level of everyday life with communities to resolve educational issues within and outside the school context. At the same time, emphasis is placed on anthropological studies of informal learning in families and communities that provide rich descriptions of the everyday contexts in which children and youth develop skills and knowledge to be productive members of their community.

Awareness by members of the community and the people active in the schools plays a major part in establishing constructive cooperation between the school and the community, as well as the necessary strategies for promoting synergy. Openness by the teachers in the community, as well as interest by the local community in the school, shall assist with the development of quality social relations. Meetings between the people active in the school and members of the community relate to discussions on school problems as well as community problems, and the joint development of solutions. The participants shall have the capacity to express their views, comprehend their common problems and concerns, and shall actively participate in activities whose results shall be visible to all persons interested and involved.

The course focuses upon the analysis of certain concepts (socialisation, subject, active person, social interaction, inter-dependence, communication, sense, strategies, practices and social identity) from different sociological trends: Theory of symbolic interaction, ethno-methodology, and social phenomenology. The impacts of these theoretical approaches upon the analysis of educational phenomena are cited through both theory and research methods, which are recorded in a micro-sociology. Coupling of micro and macro analysis.

Study of the social relations between participants from within and outside school (between students and teachers, between students, between teachers and parents from different socio-cultural environments), the operation of schools, educational practices, strategies, social identity of the participants, and the content and methods for providing school knowledge. The focus of attention upon the school class as an objective of sociological study: Examining the processes for achieving school excellence, social interactions between teachers – students, as well as the processes that contribute to (re) producing inequalities. We shall focus upon

various qualitative studies in order to better comprehend the impact by the framework, as well as the views of the various participants in the school system regarding the existing educational reality.

The course is structured around the following thematic areas:

1. Introduction-critical approaches of applied educational research
2. Analysis of key theoretical concepts (signified and signifier, socialization, social subject, agent/agency, social interaction, communication)
3. From the theories of social reproduction to the sociological constructivism-The social subject and agency
4. Theoretical approaches concentrating on the school and the community
5. The school in-between the local and national context-The school in the context of global processes
6. The operational framework of the school and the content of the school knowledge
7. Processes of school excellence, teacher-student relations and the reproduction of inequalities
8. Analysis of ethnographic examples in education- the point of view of the social subjects
9. Applied anthropology in education (epistemological and methodological issues)
10. Research, design and implementation of educational programmes at school and the community
9. Interdisciplinarity, design and implementation of educational programmes at school and the community
10. The research focus on the school and the class
11. The research focus on the family and the community
12. The study of social interaction among actors inside and outside school (students-educators, educators-parents of different backgrounds)
13. Presentation of studies

(2) LEARNING OUTCOMES

Learning outcomes
<p>Students after successfully completing the course</p> <ol style="list-style-type: none"> 1) will realise that chronological sequence is not the only causal relationship between historical events 2) will be able to broaden their problems by approaching European history as a dynamic process where many factors (economic, social, cultural, etc.) other than political or military are involved and intertwined. 3) be familiar with the research methods and study fields of historians dealing with social, economic and cultural processes in the European area since the late 18th century up to the 20th century, demonstrating the complexity of the phenomena they are examining. 4) be familiar with the modern literature on the modern and modern history of Europe and 5) have acquired search skills - mainly in digital libraries - related material, composition, presentation and writing of an essay, as well as the ability to conduct a discussion on the subject of their work.

General Competences
1. Understand the various historical factors that co-shape the social, political and economic realities of Europe. 2. Exercise of critical competence.

(3) SYLLABUS

<p>Covering the European history from the invention of typography till the three decades following the end of World War II, we attempt to highlight the various experiences of people during the early recent and modern period placing the European historic evolution in a global context. First, we investigate the important changes in a financial and social level that lead to the crisis of the seigniorial system and the immersion of European capitalism exploring the prime capitalist and subsequent capitalist financial activities. Simultaneously, emphasis is put on the concept of variation in European national, religious and social minorities and the process of composing the main European national, social and religious identities. The interest focuses on politico-social revolutions of great significance that took place during the 18th and 19th centuries while simultaneously the changes in the social structure and financial organization with the establishment of industrial capitalism are recorded. Finally, the dramatic developments of the 20th century such as World War I, World War II, the crisis during the years between World War I and II, the Cold War and process to the unified Europe.</p> <p>Basic purpose of the course is to highlight the consequences of the main incidents of the European history in the social and financial organization of the European countries from the 15th till the 20th century.</p>

(2) LEARNING OUTCOMES

Learning outcomes
<p>The students after successful completion should:</p> <ol style="list-style-type: none"> 1) Have a theoretical knowledge about gender issues, identities and gender stereotypes 2) Be able to recognise and analyse how gender and gender binaries are produced 3) Be able to evaluate educational policies using gender lens 4) Be able to design and apply a teaching free of gender biases and stereotypes
General Competences
<ul style="list-style-type: none"> • Understand gender theories that affect the development of gender identities in the society and especially in children • Critically analyse gender identities in education • Using theoretical knowledge in practice in the schools • Showing social, professional and ethical responsibility and sensitivity to gender issues

(3) SYLLABUS

The main aim of this course is to contribute to students' understandings of the ways in which gender(s) are being formed and transformed within and through education. The students will be presented with the various social constructions that contribute to the construction and negotiation of gender identities. An important issue that will be raised and discussed is the interplay between gender and other identities, like "race" and social status. Another aim of this course is to discuss gender inequalities and gender stereotypes in society as they are presented through the media and are being followed in the family and in the education system. Finally, feminist research methodologies and studies about education and gender based on them will be discussed.

(7) LEARNING OUTCOMES

Learning outcomes
<p>After completing the course, students will be able to:</p> <ul style="list-style-type: none"> - understand core notions through which philosophical thinking is practiced, - recognize the significance and the way that the philosophical question is articulated, - understand the fundamental fact of democracy and philosophy co-creation, - know the number of philosophical systems - know the major landmarks in the history of philosophy - acknowledge the fact that the development of the philosophical activity is a precondition for the creation of a political being and, in this respect, of a critically thinking teacher.
General Competences
<p>The course purpose is that the students will be able to practice their thinking, knowing and understanding the fundamental problems of European philosophy (mainly; the philosophy as metaphysics and ontology, as theory of knowledge, as philosophy of science and as language</p>

criticism) through their systematically and historical dimension.

(8) SYLLABUS

The course entails the following units:

- The aporetic character of a definition of Philosophy.
- The historicity and the history of Philosophy.
- The boundaries of philosophy: Philosophy and science. Philosophy and ideology. Philosophy and religion.
- The division of Philosophy. The ontological paradigm of philosophizing.
- The concepts of “being” and “becoming” in pro-Socratic philosophy.
- Sophistic. Plato’s ontology.
- Aristotle and the foundation of Philosophy as metaphysics.
- Fundamental issues in the philosophy of the Middle Ages.
- Philosophy as a cognitive theory.
- Rationalism, empiricism and their synthesis in Kantian philosophy.
- German Idealism.
- Philosophy as epistemology.
- Phenomenology.
- The linguistic-analytical paradigm of philosophizing.

(2) LEARNING OUTCOMES

Learning outcomes
<p>Students after successfully completing the course</p> <p>1) will realise that chronological sequence is not the only causal relationship between historical events</p> <p>2) will be able to broaden their problems by approaching Modern Greek history as a dynamic process where many factors (economic, social, cultural, etc.) other than political or military are involved and intertwined.</p> <p>composition, presentation and writing of an essay, as well as the ability to conduct a discussion on the subject of their work.</p>

General Competences
<ol style="list-style-type: none"> 1. Understand the various historical factors that co-shape the social, political and economic realities of Europe. 2. Exercise of critical competence.

(3) SYLLABUS

<p>The course attempts to highlight the issues of the modern Greek social and financial way of living from the establishment of the Greek state till the period of the military junta (1967-1974).</p> <p>More specifically, the interest firstly focuses on the social forces, the political structures, the ideological and institutional developments that took place in the political place during the aforementioned period. Secondly, reference is made to the financial and social reforms that took place in the Greek state with emphasis on sections in which the signs of modernization or regression and anachronism.</p> <p>Basic goal of the course is to emancipate the students from their attachment to the chronological sequence as the only relation of causality among the events of modern Greek history and to broaden their speculation including in it other fields (finance, society and culture) beyond politics and diplomacy in the extension of the historic course of the modern Greek state.</p>

COURSE WEBSITE (URL)	-		

(2) LEARNING OUTCOMES

Learning outcomes
<p>By the successful completion of the course, students are expected to be able to:</p> <ul style="list-style-type: none"> - Define and discuss on the content of the terms “civilization” and “culture” and discuss on the connections existing between education, civilization and culture, focusing on the political dimensions of the issue. - Define and discuss on the content of the terms “racism” and “nationalism”, to discuss on what a “minority relation” might be, and define the basic differences between migrant, historical/sub-national and indigenous minorities. - Be able to identify the basic differences between the “cultural universalism” and “cultural relativism” and explain the way each of these two schools of thought approaches the issue of the education (of students belonging to minority cultures) - Be able to compare the basic elements of the models for the education of culturally different pupils (assimilative, incorporative, multicultural, antiracist, intercultural) and discuss on the basic differences existing among them. - Be able to state the basic issues (mainly political) on bilingualism and bilingual education - Be able to quote the basic elements of the history and the education of the Muslim minority in Thrace

- Be able to quote the basic elements of the Greek education policy regarding the education of migrant and minority pupils in Greece after 1980.

General Competences

The course aims at providing the students the ability to:

- Work in an interdisciplinary environment
- Respect for difference and multiculturalism
- Think critically on stereotypes (social, cultural), national myths, rigid gender roles etc.
- Understand theories of social sciences (sociology of education, social psychology, social anthropology, pedagogics, history and political science).
- Understand, analyze, synthesize and relate complex information and data.

(3) SYLLABUS

The aim of the course is, on the one hand, to facilitate students become familiar with the basic theories of culture and, on the other hand, to present the multiple interconnections between education and culture, emphasizing on their historical and political dimensions.

The main topics of the course are:

- Civilization – Culture. Cultural relativism – cultural universalism. The issue of cultural differences – the issue of social recognition.
- Representation of the “other”: stereotypes and preconceptions. Narratives for the “cultural other”. Ethnography.
- Racism – “race”. Dominant and dominated cultures, power relations and exploitation. From biological to cultural racism.
- Nationalism and the nation-state. Minority issues and minority relations.
- Educating the “other”. From the “educational/cultural deficit” hypothesis to the hypothesis of difference.
- National culture – national education. The education of minorities and immigrants in Greece. The education of the Turkish speaking Muslim minority in Thrace.
- Bilingualism. Relations between language and culture. Research outcomes on the relation between mother tongue and second language. Models of bilingual education.
- Intercultural education: the Greek experience.

(2) LEARNING OUTCOMES

Learning outcomes
<p>Οι φοιτητές/τριες μετά την επιτυχή ολοκλήρωση του μαθήματος <u>θα μπορούν να:</u></p> <ul style="list-style-type: none"> • recognize basic concepts of educational policy, • recognize the main factors of educational policy implementation, • understand the deeply political nature of education and educational policy, • understand the dynamic relationship between education and educational policy with the directly interested social groups, • understand the complexity of the exercise of educational policy and the interests it "reflects" (government, educational and administrative actors, students, parents, trade unionists, employer representatives, advisory and scientific bodies, etc.), • critically evaluate, not only policies that have been implemented in the past, but

also monitor, understand and critically address current educational policy,

- know the basic legislation of Greek education.

General Competences

- Basic knowledge in the scientific field
- Cultivating critical thinking and attitude

(3) SYLLABUS

The course introduces basic concepts of education policy. It analyzes the relationship of educational policy with other fields of public policy. Issues of organization and administration of the educational system are presented. A comparative analysis is made of the alternative theories related to the formation of educational policy. The main social, economic, ideological and political factors that contribute to the conception, elaboration and implementation of educational programs and mainly reform programs are identified. The most important agencies that are activated towards the formation of educational policy and the dynamics of change and maintenance that develop towards new educational approaches are analyzed. Exemplary cases of implementation of educational reform programs at the national and international level are examined, their targeting, implementation and effects, both on the structure of the educational system and on the bodies involved in education (students, parents, teachers, politicians).

(2) LEARNING OUTCOMES

Learning outcomes
<p>Students after successful completion of the course will be able to</p> <ol style="list-style-type: none"> 1) explain the theories that have been formulated around the historical and social approach of childhood 2) distinguish the different processes of childhood formation both in historical time and from society to society 3) Identify and explore social conditions and variables, such as gender, social class, ethnicity, that have influenced the concept of childhood as a distinct social class.
General Competences
<ol style="list-style-type: none"> 1. Understand the various historical factors that co-shape the social, political and economic realities of Europe. 2. Exercise of critical competence.

(3) SYLLABUS

The course attempts to provide an introduction and understanding of the concepts of 'childhood' and 'youth' by employing tools of social history and anthropology. By highlighting the human bonds (social, financial and political) affecting or determining the position and choices of people in Europe from the late Middle Ages till the 20th century, certain parameters of these two historic categories are investigated. Some of the main issues that are investigated are the human reproduction and the child's state in its family and social environment, the education as a formation and socio-political control, the integration of children and young people in the society as well as the forms of child labor and expression of childhood autonomy.

The main goal of the course is to highlight the variation of the social categories of 'childhood' and 'youth' in the historic space and time.

(2) LEARNING OUTCOMES

Learning outcomes
<p>After completing the course, students will be able to:</p> <ul style="list-style-type: none"> critically review the reading process and examine relationships produced with a focus on the book to understand the book as a material object, accompanied with embodied practices and cultural perceptions and values support non-dominant reading practices in an educational context, taking advantage the range of the reading spectrum in everyday educational practice.

General Competences
<ul style="list-style-type: none">– <i>Search, analysis and synthesis of data and information, using the necessary technologies</i>– <i>Adaptation to new situations</i>– <i>Autonomous work</i>– <i>Teamwork</i>– <i>Work in an interdisciplinary environment</i>– <i>Production of new research ideas</i>– <i>Respect for diversity and multiculturalism</i>– <i>Exercise criticism and self-criticism</i>

(3) SYLLABUS

An anthropological orientation to the study of reading, focuses on the different contents and functions of reading activity in different contexts. The course, adopts interdisciplinary perspectives and deals with modern meanings of reading in everyday life. It focuses on the ways people make sense of their relationship with books. At the same time, the aim of the course is to give a scientific and critical perspective to the common perceptions for reading. This broader dimension of reading, contributes to a deeper understanding of the factors that shape readers from preschool age.

Specifically, the course highlights:

- historical-cultural aspects of reading
- physical dimensions of reading
- reading as an individual activity- identity and reading
- reading as a social activity, sociability around reading
- forms of reading, dominant reading practices
- gender dimensions in reading
- places and spaces of reading.

(2) LEARNING OUTCOMES

Learning outcomes
This course aims to a deeper understanding of how we draw meaning from what we see and how we interact with our visual environment in different contexts. In this direction, it offers a set of skills that allow an individual to identify, interpret, evaluate, use effectively and create images by visual means. A visually literate person develops as a critical consumer of visual media as well as someone capable of contributing to a set of shared knowledge.

General Competences

- *Respect for diversity and multiculturalism, sensitivity to gender issues*
- *Promotion of free creative thinking*
- *Project design and management*
- *Autonomous work*
- *Teamwork, collaboration*

(3) SYLLABUS

The subject of Visual Literacy deals with the ability of the individual to read, understand, and write in visual language. This course focuses upon the concepts, forms and uses of visual language in various areas of everyday experience.

The topics we will explore include:

- Types of images. Image historicity.
- Image as text. Image-text borders and connections.
- Visual Culture / Visual Literacy: raising children in a world made of images.
- The representation of gender, class, ethnic group, age, skill.
- Uses of the image. Theory and Criticism. Image analysis and interpretation.
- New technologies and digital media: the evolution in the production and dissemination of images. Media and Information Literacy (MIL)
- Good practices and suggestions for the use of the image in Preschool Education
- Documents' analysis: advertising, art, children's drawing, illustrated books for children, films for children (fiction/ documentary).
- Exercises of experiential comprehension, evaluation and reflection on selected images.

Lectures	3	4.5	
COURSE TYPE	Background Knowledge		
PREREQUISITE COURSES:	x		
LANGUAGE OF INSTRUCTION and EXAMINATIONS:	Greek		
IS THE COURSE OFFERED TO ERASMUS STUDENTS	Yes		
COURSE WEBSITE (URL)	Eclass		

(2) LEARNING OUTCOMES

Learning outcomes
<p>After successful completion of the course, students will be able to:</p> <ol style="list-style-type: none"> 1) Familiarize with theories and methods of ethnographic research associated with the study of kinship and family 2) Identify multiple forms of kinship and family relations as well as culturally-specific arrangements of the domestic space in different socio-cultural and historical contexts 3) Understand the cultural diversity of notions of family, household, marriage, descent, kin, motherhood, fatherhood, etc. 4) Distinguish “older” and “new” forms of kinship 5) Recognize different forms of kinship and relate them to other domains of social life (education, work, consumption, religion, medicine, politics, etc.) 6) Interpret relationships and practices that take place within the family and kinship and interconnect them with processes of socialization of children and adults as well as processes of becoming and belonging 7) Analyze processes of learning and knowledge production/reproduction within processes of relatedness, family-making and kinship 8) Evaluate the relevant legal framework and social policy measures for families
General Competences

- Understanding and interpreting epistemological debates and theoretical concepts in the field of education
- Scientific concepts in pre-school childcare facilities
- Understanding the various factors that co-form social and educational reality.
- Autonomous work
- Teamwork
- Working in an international environment
- Working in an interdisciplinary environment
- Develop critical and reflexive thinking
- Respect differentiation and multiculturalism.
- Demonstrate social, professional and ethical responsibility and gender awareness
- Promote free, creative and inductive thinking

(3) SYLLABUS

The course aims to introduce the students to contemporary anthropological debates on kinship, family, intimacy and "relatedness". Indeed, the course analyzes classic and contemporary theories of kinship. Additionally, it concentrates on culturally diverse ways of kinship/family organization and arrangement of the domestic sphere in different societies and cultures. Further emphasis is placed on the concepts of marriage, dowry, descent, motherhood, fatherhood as well as "old" and "new" forms of family-making. Simultaneously, the course associates relationships and practices of kinship and family with processes of learning and knowledge, socialization, becoming and belonging as well as with various domains of social life. In the context of the analysis of contemporary kinship transformations, attention is placed on the national and international legislative framework for the family.

The course is structured around the following thematic areas:

- 1. What is kinship?**
- 2. Anthropological approaches to kinship from the 19th until the first half of 20th century**
- 3. Anthropological approaches to kinship from the second half of 20th century until today**
- 4. Descent and marriage**
- 5. Domestic space**
- 6. Kinship and gender**
Gender, Family and power relations
Contemporary approaches to parenthood-motherhood-fatherhood
- 7. Kinship and age**
Children and family
Intergenerational relations
Children's rights
- 8. Kinship- "relatedness" - "belonging"**

<p>The family as a locus of learning processes-Informal learning within the family</p> <p>The family as a locus of belonging</p> <p>9. Social exclusion and family</p> <p> Socially vulnerable groups</p> <p> Children and poverty</p> <p>10. “New” forms of family relations</p> <p>11. Political and legal regulation of the family</p>

(2) LEARNING OUTCOMES

Learning outcomes
After successful completion of the course, students will be able to:
1) understand the relevant theoretical concepts and methodological approaches developed in the framework of the course
2) relate the afore-mentioned approaches in the study of education and schooling, while placing emphasis on the social subjects' perspectives
3) distinguish the social and cultural dimensions of: i) formal educational processes with an emphasis on the school and ii) alternative processes of learning and reproduction of informal knowledge taking

place outside formal educational contexts

4) become familiar with the analysis of ethnographic examples on education and schooling

General Competences

The course aims to familiarize students with anthropological concepts and methods in the study of educational institutions and learning processes through comparative analysis of ethnographic examples.

(3) SYLLABUS

Drawing on studies on education grounded in ethnographic fieldwork that is anthropology's primary methodological tool, the course focuses on "bottom-up" approaches of concepts, relationships and practices related to education with an emphasis on the school and the school praxis as well as processes of learning and reproduction of knowledge in diverse socio-cultural and historical frameworks.

The course provides an overview of anthropological concepts and methods in the study of education reflected in a wide range of ethnographies of the school/classroom as well as of alternative educational environments. Specifically, the course concentrates on the social and cultural dimensions of formal educational processes with an emphasis on schooling and the school curriculum as well as learning processes, linguistic practices and ways of managing and reproducing knowledge that take place outside the school context, i.e. the family, community, etc.

The course presents key methodological tools -premised on intense participant observation- developed during the last decades in the anthropological study of education. Through comparative analysis of ethnographic examples from different educational settings (formal, non-formal and informal), the Anthropology of Education brings into light the complexities, tensions and contradictions associated with differentiated practices of education followed by different social groups in the context of broader socio-political frameworks and global transformations. Acknowledging both the importance of institutional frameworks and processes as well as informal practices taking place in the sphere of everyday life as fields of action of the social subjects, even in conditions that constrain considerably the subjects' agency, anthropological approaches to education highlight the social subjects' point of views, including those of children.

The course is structured around the following thematic areas:

1. **Introduction to the Anthropology of Education**
2. **Historical formation of the field of Anthropology of Education in the America and Europe**
3. **The relationship between Anthropology of Education, Critical Pedagogy, New Sociology of Education and Educational Psychology**
4. **From theories of social reproduction to social constructivism – The rise of the notion of social agency/social agent (socialization, social subject, social interaction, communication)**

5. **The notion of culture (culture and education).**
6. **Ethnographic approaches to education and the school.**
7. **Formal, non-formal and informal education**
8. **Education, national and ethnic identity: The school as a field of intercultural interactions**
9. **Anthropological approaches to “learning” and “knowledge”**
10. **Education, childhood and family.**
11. **Education and social inequalities**
12. **Education and mobility**
13. **Methodological approaches in the anthropological study of education-Doing field research with children**

(K 44 E) Sociological and Anthropological Approaches to Childhood*Instructor: Ivi Daskalaki, Assistant Professor***COURSE OUTLINE****(1) GENERAL**

SCHOOL	School of Education Sciences		
ACADEMIC UNIT	Department of Education Sciences in Early Childhood		
LEVEL OF STUDIES	Undergraduate – 1 st Cycle of studies		
COURSE CODE	K 44 E	SEMESTER	5th
COURSE TITLE	Sociological and Anthropological Approaches to Childhood		
INDEPENDENT TEACHING ACTIVITIES		WEEKLY TEACHING HOURS	CREDITS
		3	4.5
COURSE TYPE	General background		
PREREQUISITE COURSES:			
LANGUAGE OF INSTRUCTION and EXAMINATIONS:	Greek		
IS THE COURSE OFFERED TO ERASMUS STUDENTS	Yes		
COURSE WEBSITE (URL)	Eclass		

(2) LEARNING OUTCOMES

Learning outcomes
<p>After successful completion of the course, students will be able to:</p> <ol style="list-style-type: none"> 1) Describe the concept of "childhood", recognizing its diversity in time and space 2) Develop key theoretical and methodological approaches in the study of childhood in sociology and social anthropology 3) Identify -through comparative analysis of ethnographic examples- different experiences of childhood 4) Identify childhood as a field of control, intervention and regulation through education, media and technology 5) Ask critical questions associated with rights and standardized childhood patterns 6) Document -through ethnographic examples- social transformations related to childhood.
General Competences

- Understanding and interpretation of key theories and concepts in the field of childhood studies
- Familiarizing with methodological approaches in the study of children and childhood
- Understanding the various factors that co-form social and educational reality.
- Promote free, creative and inductive thinking
- Respect to the differentiation and the multiculturalism
- Autonomous work
- Teamwork
- Working in an international environment
- Working in an interdisciplinary environment
- Develop critical and reflexive thinking

(3) SYLLABUS

The aim of the course is to introduce students to the contemporary issues of the historical, social and cultural construction of childhood. The course includes analysis of childhood theories of socialization and development, whilst attempting a critical evaluation of classical and new sociological theories as well as childhood theories from the perspective of social anthropology. Additionally, the course concentrates on ethnographic examples which demonstrate both different experiences of childhood in different historical and cultural contexts as well as the views of children themselves for their experience of childhood and their meaningful for them relationships.

The course is structured around the following thematic areas:

1. Childhood as a historical, social and cultural construction and its diversity in time and space
2. Children as social agents
3. Theoretical approaches to childhood
 - Classical and new theories of socialization
 - Theories of developmental psychology
 - New sociology of childhood
 - Anthropology of Childhood
4. Methodological approaches to childhood
 - Ethnographic research with children
 - Child-centered and non-child-centered methodology
 - Ethical considerations in research with children
5. Ethnographic Examples of Childhood
 - Children and the school
 - Children and work

<ul style="list-style-type: none"> • Children on the move
6. Social control-Discipline-Children
<ul style="list-style-type: none"> • School discipline • Social media and children • Children and technology
7. Children's rights
<ul style="list-style-type: none"> • Children as a value • The Convention on the Rights of the Child • Child protection • Child and political participation
8. Childhood in the 21st century

(2) LEARNING OUTCOMES

Learning outcomes
<p>Οι φοιτητές/τριες μετά την επιτυχή ολοκλήρωση του μαθήματος <u>θα μπορούν να:</u></p> <ul style="list-style-type: none"> • distinguish and understand the political-ideological scheme in which concepts related to education, training and guidance of teachers in the context of lifelong education are included, • classify and combine the principles, types and forms of training found in the relevant pedagogical literature, as well as their extensions and connections with the professional development of teachers, • recognize, choose and organize techniques and methods of effective education, training and guidance of teachers, as well as the way they contribute to their personal scientific and professional development

- structure appropriate programs for their training and professional development
- evaluate the usefulness and necessity of specific principles, institutions and teacher training and guidance agencies and support their positions for the above.

General Competences

- Basic knowledge in the scientific field
- Cultivating critical thinking and attitude

(3) SYLLABUS

The aim of the course is to study the issue of teacher education in relation to mentoring and training, in its historical course up to today in our country, to analyze the concept, forms and purposes of training and to present the institutions that are primarily responsible for the training of teachers today and, by extension, offer opportunities for their professional development.

The course content is structured as follows:

- Teacher training in Greece today
- The training of teachers internationally
- The training of teachers: forms and institutions of training, models and modern (alternative) forms of training, types of training programs
- Professional development of the teacher
- Mentoring

(4) TEACHING and LEARNING METHODS - EVALUATION

DELIVERY	Face to face	
USE OF INFORMATION AND COMMUNICATIONS TECHNOLOGY	PowerPoint Eclass Email	
TEACHING METHODS	<i>Activity</i>	<i>Semester workload</i>
	Lectures	39
	Study/analysis of bibliography	31

(2) LEARNING OUTCOMES

Learning outcomes
<p>After completing the course, students will be able to:</p> <ol style="list-style-type: none"> 1) identify the content of the science of education, methods and concepts. 2) place science education in relation to modern educational reality 3) distinguish the reasoning of the sciences of education from the reason of other forms of knowledge 4) plan (on paper) small research projects belonging to the field of education sciences
General Competences
<ul style="list-style-type: none"> • Understanding and interpreting scientific theories and concepts from the field of educational sciences. • Transfer of scientific concepts to pre-school children. • Use of concepts and methods in research projects on paper. • Autonomous work

(3) SYLLABUS

- Definition of the science of education, education, pedagogy, learning and teaching.
- The origin of the term "Education Sciences" and the transition from Pedagogy to Education Sciences.
- The conditions of autonomy of Education Sciences. The Science of Education during the 1960s and 1970s.
- The epistemology of the science of education.
- The scientific nature of the science of education.
- Evolution of the science of education in relation to other sciences.
- The usefulness of the science of education in educational practice.
- Research, its aims and methods in the science of education.
- Relationship between Educational Sciences and Pedagogical Practices.
- Educational events and educational situations and the "objects" of education.
- The science of education (objects, methods, concepts):
 - Education economy
 - History of education
 - Educational sociology
 - Psychology of education
 - School demography

(2) LEARNING OUTCOMES

Learning Outcomes
<p>-Upon the successful completion of the course, the students <u>will be able to</u>:</p> <ol style="list-style-type: none"> 1. Describe the key features of the current educational directions and compare them to the characteristics of the traditional pedagogical approaches in preschool education. 2. Analyze; synthesize the factors that led to the formation of the modern alternative trends in the postmodern era and come up with conclusions. 3. Identify the purposes and objectives of the alternative programs in formal and informal educational settings. 4. Plan alternative programs appropriate for preschool children by involving their parents and provide documentation of their plans. 5. Identify criteria, evaluate the modern alternative programs and provide documentation of their judgments.

General Skills
<p>Understanding and interpretation of the scientific theories and concepts from the field of the Science of Education Transfer of scientific meanings in preschool teaching classes. Understanding of the various factors that co-shape the social and educational reality. General: Teamwork Working in an international environment</p>

Working in a multidisciplinary environment
Critical debates and self-criticism

(3) COURSE CONTENTS

- Pedagogical approaches and forms of education from the early 20th century.
- From Intellectualism of traditional pedagogy to the pedagogical reforms and Democratic School. The basic parameters of education: the ideals, the objectives and the goals of education, the role of the student in the learning process, the role of the educator, the role of education in society.
- The changing of the role of the school in postmodern society. New functions of the school. Autonomous learning and self-organizing of the school. The educator in the new learning environments.
- Education in the postmodern era. Postmodernism and education. Critique on the Modern. Counter-Education.
- Child-centered dimension of education. Experiential Communicative Teaching Examples. Classic and new theoretical pedagogical approaches and Reform Movements. Democratic School.
- The basic components of visions, convergence and divergence points. Education and discipline in classical and new pedagogical approaches. Their Critique.
- Alternative education. Alternative education and alternative programs.
- Open School. Theoretical views and Examples.
- A School that is open to society. Examples. Waldorf School. Anti-authoritarian education. Summerhill -Free School.
- The Reggio Emilia Pedagogical approach. Theory and features.

(2) LEARNING OUTCOMES

Learning Outcomes
<p>Upon the successful completion of the course, the students <u>will be able to</u>:</p> <ol style="list-style-type: none"> 1. Identify and explain the main characteristics of the assessment process 2. Distinguish, interpret and define the object, the goal and the criteria of an assessment process based on which they may be able to plan and implement assessment processes and strategies for the student within the classroom 3. Implement self-assessment and assessment by peers strategies within the classroom 4. Plan and implement the assessment of the educational process 5. Plan the processes and implement the internal evaluation of the kindergarten in cooperation with the parents and other social actors. 6. Post-evaluate the assessment process.

General Skills
<p>Planning, implementation and assessment/self-assessment of innovative educational programs in official and alternative places of learning.</p> <p>Kindergarten management and operating assessment methods.</p> <p>Planning and organization of programs for the internal evaluation of educational units.</p> <p>Research, analysis and combination of data and information, with the use of the necessary technology.</p>

Decision making
 Teamwork
 Working in an international environment
 Promotion of new research ideas.
 Project planning and management

(3) COURSE CONTENTS

Conceptual approach and discriminatory terms of evaluation and of assessment. The evaluation of education in Greece and the doubts that are being expressed nowadays. Positive and negative attitudes. Theoretical schemes and assessment forms. Diagnostic, formative, Summative assessment. The characteristics of the assessment process, objects, goals, methods and criteria of assessment. The assessment of the educational process and the self-assessment of the educator. The assessment of learning, assessment as learning and assessment for learning. Evaluation of pre-school education. Assessment in kindergarten classes. Formal and informal forms of assessment in kindergarten- strategies and practices. Descriptive assessment. The portfolio. The evaluation of the education institution/kindergarten. Internal evaluation, self-assessment of the schools in Greece and abroad. Internal evaluation models.

(2) LEARNING OUTCOMES

Learning outcomes
<p>After completing the course, students 1) will be able to describe and critically analyze teaching situations</p> <p>2) they will have the opportunity to reflect on flexible learning environments and modern pedagogical approaches</p> <p>3) they will enrich their scientific knowledge of educational design and will be provided with suggestions for application in the classroom and in other teaching contexts</p>
General Competences
<ul style="list-style-type: none"> • Adaptation to new situations • Decision making • Autonomous work • Team work, cooperation • Project planning and management • Criticism and self-criticism • Respect for diversity and multiculturalism, sensitivity to gender issues • Search, analysis and synthesis of data and information, also using new technologies.

(3) SYLLABUS

- The art of teaching and the science of education. Definition and basic concepts of Teaching.
- Foundations of modern Teaching: Theories of Vygotsky, Bruner and Piaget.
- Teacher-centered/ Student-centered approaches
- Teaching Models. From Didactic Education to Authentic and Transformative Education.
- Dimensions for designing effective teaching/learning environments. Creating positive teacher-student relationships in learning environments.
- Space and interaction in teaching. Space as a pedagogical field, in preschool learning environments
- Psychoanalytical approaches to teaching practice. Learning as pleasure.
- Innovation and Creativity in the educational process.
- The changing role of teachers and students in the 21st century teaching and learning environment. The teacher as designer of learning experiences, use of technologies, multicultural contexts, extended learning.
- The educator as researcher. Alternative ways of teaching/learning and research.
- Cooperative teaching. Differentiated/personalized approach. Intercultural Teaching. Inclusive education. The concept of giftedness.
- Interdisciplinary approach. Beyond the classic Project Plan (PBL)
- Discovery/ Investigative teaching. Questions as a teaching tool, teaching method and strategy.
- Problem-solving oriented teaching. The case of Philosophy for Children (P4C) as an interdisciplinary approach to active learning.
- The integration of new technologies in teaching - Distance teaching.
- Current developments and perspectives in teaching/learning: Towards a child-centered use of Artificial Reality (AI)

COURSE WEBSITE (URL)			

(2) LEARNING OUTCOMES

Learning outcomes
<p>After completing the course, students will be able to:</p> <ol style="list-style-type: none"> 1) recognize main concepts and terms within the field of language teaching, 2) exploit these concepts and terms in teaching the Greek language, 3) design and implement teaching activities cultivating students' communicative competence and literacy skills, 4) recognize and critically approach widely accepted stereotypes and prejudices concerning linguistic inequality and students' academic failure.
General Competences
<ul style="list-style-type: none"> • Understanding and interpretation of scientific theories and concepts related to the field of education • Application of scientific concepts to the field of preschool education • Awareness of various factors that contribute to the social and educational reality • Application of educational practices and methods focused on all-around child development • Design, application and evaluation/self-evaluation of innovative educational syllabi in formal and alternative education • Respect of diversity and multiculturalism

- Search for, analysis and synthesis of data and information, with the use of the necessary technology

(3) SYLLABUS

The course begins with a brief introduction to genre theory, the main principles of the text-based approach to language, and the similarities and differences between oral, written, and electronic discourse. Then, we discuss the definitions and types of literacy, its relation to school success/failure, as well as concepts such as literacy practices, literacy events, literacy domains, (critical) language awareness, and multiliteracies. Emphasis is placed on the ethnographic approach to literacy and on the cultivation of literacy in early childhood education. Reference is also made to the goals of adult literacy education, literacy at the workplace, and to the exploitation of narratives in cultivating critical literacy.

Sections of the course:

1. Introduction to language teaching
2. Approaches to language teaching
3. Syllabi and language teaching
4. Lesson design
5. Language skills
6. Language learning strategies
7. Introduction to literacies
8. Basic principles and models of literacies
9. Literacy in preschool
10. Error analysis in language teaching
11. Teaching Greek as L2/FL
12. Teaching Greek as a heritage language
13. Presentations of projects

(2) LEARNING OUTCOMES

Learning outcomes
The students, after the successful integration they will be able to: <ul style="list-style-type: none"> • Know the applied health education programs in early childhood, • Be familiar with the relevant needed methodological approaches.
General Competences
<ul style="list-style-type: none"> • Understanding and interpretation of the scientific theories and concepts in Health Psychology as well as applying them in specific education places, • Using of the scientific concepts in places of preschool education, • Applying of good practices and methodologies targeting in the holistic child development.

(3) SYLLABUS

Programs promoting psychology health such as supporting self-esteem and self-confident, developing communication skills, and feelings' management are presented in detail. Programs promoting healthy diet, exercising, and hygiene, protecting from accidents and
--

natural disasters, promoting future healthy relationships, and targeting in avoiding future addictions are also presented.

(2) LEARNING OUTCOMES

Learning outcomes
<p>After successful completion of the course, students will be able to:</p> <ol style="list-style-type: none"> 1) handle the concept and identify the characteristics of collaborative learning 2) organize the appropriate supporting framework for collaborative learning in the preschool class in spontaneous and organized activities 3) observe and evaluate the work of children in small groups 4) plan activities to enhance collaborative learning among preschool children in kindergarten and in informal education settings and evaluate them 5) select and apply the most appropriate cooperative learning techniques and collaborative learning methods according to their educational objectives and the group of pupils
General Competences
<ul style="list-style-type: none"> • Understanding and interpreting scientific theories and concepts from the field of educational sciences • Transfer of scientific concepts to the education of preschool children. • Understanding the various factors that shape social and educational reality. • Implementation of educational practices and methods with reference to the child's development. • Design, implementation and evaluation / self-assessment of innovative educational programs in institutional and alternative training areas.

- Team work
- Respect for difference and multiculturalism
- Showing social, professional and ethical responsibility and sensitivity to gender issues
- Criticism and self-criticism
- Production of free, creative and inductive thinking

(3) SYLLABUS

- A) The students in classroom as a social group.
- B) Collaborative teaching and learning:
- Semantic specification and historic flashback
 - Theoretical foundation of collaborative learning and benefits for students
 - Models of collaborative teaching and learning
 - Capabilities and methods of application in early childhood education
 - The role of the kindergarten teacher
- C) Creation of supportive context for teamwork in spontaneous and organized activities of children in the kindergarten.
- D) Description and examples of activities for the reinforcement of collaborative learning in the kindergarten.

(2) LEARNING OUTCOMES

Learning outcomes
<p>After completing the course, students will be able to:</p> <ol style="list-style-type: none"> 1) Identify both the theoretical framework of the course and its applications and use them creatively in their work as members of a paired group. 2) Collaborate and support the learning process of their fellow student "supervising" him / her. 3) Creatively solve the obstacles encountered by their fellow students during "supervised learning". 4) Transmit their knowledge by developing effective teaching practices. 5) "Commit" to a learning process that exceeds their present abilities and to progressively transfer the responsibility to acquire skills and knowledge (the logic of the zone of imminent development) to others. 6) Engage actively in a participatory learning process by taking initiatives to conduct the course as active subjects and integrating the final result into it (project logic). 7) Evaluate their own didactic interventions, their effectiveness and the progress they have made on a cognitive level.

General Competences

1. "Supervised learning" through experience.
2. Understanding and interpreting the scientific theories and concepts from the field of didactics.
3. Transfer of scientific concepts to pre-school children.
4. Develop collaboration, cognitive interactions, sense of ability to succeed and learning autonomy.

(3) SYLLABUS

1. Brief historic overview of "Peer Teaching" in Europe and Greece (17th-20th centuries). The theoretical bases of tutoring: the social construction of theories of learning (Vygotsky, Bruner, Perret-Clermont, Doise, Mugny, Winnykamen). Their contribution to the modern pedagogical and learning process.
2. The tutoring supervision in relation to:
 - collaborative learning
 - the cognitive and social benefits for the people involved in it
 - strengthening of formal teaching
 - tackling school failure
 - Pedagogical support and its forms
 - assistance strategies and their management,
 - cognitive and social interactions during its application.
3. Forms of application of tutoring in the classroom and in the kindergarten within the framework of differentiated pedagogy. The research work of CRESAS.
4. The limitations of the tutoring.
5. The supportive learning (l'étayage) and the mediated learning. The mediating role of the teacher in the process of knowledge acquisition. The cultural dimension of mediation.
6. The orientations of research and research paradigms for individualized learning with supervision: connecting elementary school and kindergarten, reading in kindergarten and elementary school, intercultural education, science in kindergarten, learning of methodology with supervision learning at the university.

(2) LEARNING OUTCOMES

Learning outcomes
<p>After completing the course, students will be able to:</p> <ol style="list-style-type: none"> 1) understand first aid issues 2) handle accidents occurring at their place of work 3) manage issues related to basic life support and prehospital trauma life support 4) understand health and safety issues in early childhood education units 5) plan, organize, manage and manage an educational unit in an integrated cycle of business operation 6) familiarize themselves with ways of organizing and operating a School Library.

General Competences

- Acquiring knowledge and critical thinking skills on topics related to learning and teaching in early childhood education
- Transfer of scientific concepts to pre-school children.
- Implementation of educational practices and methods with reference to the child's all-round development.
- Acquiring knowledge and skills to manage first aid issues.
- Search, analysis and synthesis of data and information, using the necessary technologies.
- Development of critical thinking.
- Development of decision-making ability.
- Promote free, creative and inductive thinking.
- Exercise of criticism and self-criticism
- Acquisition of knowledge and skills in matters related to the organization, management and administration of an educational unit
- Acquisition of skills necessary for a future teacher in early childhood

(3) SYLLABUS

The specific practical course includes the following sub-modules: (a) Tutorial on Hazards and Accidents and (b) Organization and Management of an Educational Unit.

A) Tutorial on Hazards and Accidents

The tutorial is aimed at the students of the pedagogical departments in order to inform them on first aid issues and to enable them to deal with accidents in the workplace, especially in relation to their students. Simultaneously, it helps them to calmly deal with accidents at home and on holidays and teaches them the necessary actions in the event of an emergency. The purpose of the tutorial is to prepare the students, through the knowledge and skills they will acquire, to properly address and manage issues related to basic life support and pre-hospital support of life in case of trauma. The training will be essentially of a practical nature with the application of relevant algorithms and protocols. It will be carried out with the help of modern training manikins designed for this purpose and will be completed in 6 three-hour thematic modules, in which the presence of the students will be compulsory. The final module will evaluate the knowledge acquired by the trainees, who will be required to deal with scenarios related to the recognition, assessment and management of emergencies. Upon successful evaluation, the student gets a degree and receives a certificate from the Department's Administration Office.

B) Organization and Administration of the Educational Unit

Designing and detailed description of the phases of organizing, operating, managing and administrating an

educational space taking into consideration health and safety issues. The organization of a pre-school educational space is done with priority to its financial and administrative activities and functions.

B1) Organization of the School Library

This course analyzes the objectives of a well-organized (pre)-school library. It presents the space or spaces required and the way in which it will be created, the assembly of the material collected by the staff, the organization of the material according to the Decimal Classification System Melvil Dewey and finally the Operating Rules of the Library.

(2) LEARNING OUTCOMES

Learning outcomes
After completing the course, students will be able to: 1) Integrate principles of intercultural education into educational programs. 2) Translate national physical activity guidelines and design and implement appropriate programs to achieve those guidelines.
General Competences
<ul style="list-style-type: none"> Acquisition of critical thinking knowledge and skills on issues related to the learning and teaching of pre-school students. Transfer of scientific meanings in preschool teaching classes.

- Understanding the parameters of planning and implementing an activity in kindergarten.
- Implementation of educational practices and methods with reference to the child's development.
- Respect towards diversity and multicultural values.
- Search, analyze and synthesize data and information, using the necessary technologies
- Critical thinking skills.
- Decision-making skills.
- Team-working skills.
- Production of free, creative and inductive thinking on issues of development and education of preschool children.
- Criticism and self-criticism

(3) SYLLABUS

The specific course consists of two modules: (a) Handling Cultural Diversity in the Classroom and (b) Physical Activity and Health in Early Childhood Education. More specifically, it includes the following:

A) Handling Cultural Diversity in the Classroom

During this seminar students review the principles of intercultural education. Then, are given specific directions on the issues of communication with non-Greek speaking children and the teaching of Greek as a second language, as well as directions on how to engage non-Greek speaking and foreign children in school celebrations and festivities.

B. Physical Activity and Health in Early Childhood Education

Students will learn about the importance of intervening with a physical activity intervention in the preschool years and to take care for an environment as an appropriate and amenable target for such intervention. Students will also review the prevalence of physical activity, sedentary behavior and obesity in the preschool population and the impact that these lifestyle behaviors and conditions have on the health of preschool aged children.

- Respect for difference and multiculturalism
- Showing social, professional and ethical responsibility and sensitivity to gender issues
- Criticism and self-criticism
- Production of free, creative and inductive thinking
- Respect for the natural environment

(3) SYLLABUS

The course examines play as a means of pre-school children's education and development. Initially, the historic significance that was given to play in each time period is approached. Emphasis is put on the opinions of important educators (Locke, Rousseau, Froebel, etc.) that have pointed out play as a pedagogical mean. In the following, the relation that nowadays is considered to exist between play and child development mainly based on modern play theories. Simultaneously, the role that is internationally attributed to play in early childhood education programs is analyzed and ways with which play can be exploited in practice as an activity along with educational toys for the full scale advancement of children in kindergarten.

Showing social, professional and ethical responsibility and sensitivity to gender issues

(3) SYLLABUS

This course presents a developmental child-centered approach to the guidance and discipline of young children including children with disabilities. Influential theories, relevant research, and effective guidance methods for the early childhood teacher and other professionals working with young children and families, including families from different cultural and economic backgrounds are discussed.

Objectives:

1. To introduce students to the basic terminology, concepts, theoretical viewpoints and application of developmentally appropriate early childhood guidance.
2. To enhance student's skills in implementing a variety of widely used child guidance and discipline methods.
3. To develop effective communication skills in working with children, families and other professionals.
4. To become aware of child guidance issues and strategies in working with students from diverse backgrounds or with students with disabilities.
5. To develop a personal child guidance philosophy statement to use professionally.

(2) LEARNING OUTCOMES

Learning outcomes
<p>After successfully completing the course, students will be able to:</p> <p>Use methods of observing and recording the behavior of preschool children in the classroom context</p> <p>Understand the importance of observation as a tool for studying child development and interaction with other children and adults in the classroom</p> <p>They will practice careful use of recording language paying particular attention to the choice of words and descriptions avoiding bias and premature generalization.</p> <p>Will they learn how to analyze and draw dynamic conclusions about the development of children they observe and how to design individual or program adaptations.</p>
General Competences
<p>Adapting to new situations</p> <p>Decision-making</p>

Working independently
 Team work
 Working in an interdisciplinary environment
 Respect for difference and multiculturalism
 Showing social, professional and ethical responsibility and sensitivity to gender issues
 Production of free, creative and inductive thinking
 Criticism and self-criticism

(3) SYLLABUS

In this course emphasis is placed on the significance of systematic observation for teaching and learning purposes. The method aims at equipping students with the capacity to observe in a non obtrusive manner and to record the behavior of children in naturalistic environments for the purpose understanding development in the preschool years in structured settings.

Students are encouraged to observe their own biases and beliefs, acquire observation skills and cultivate facility in recording methods. A final synthesis based on observational data is produced.

(2) LEARNING OUTCOMES

Learning outcomes
<ol style="list-style-type: none"> 1. After completing the course, students will be able to: 2. Recognize the main theoretical approaches to the emergence of literacy. 3. Explain the basic principles and basic concepts of the new approach to the emergence of reading and writing. 4. Design, implement and evaluate reading and writing instructional activities resulting from the contemporary views of scientists on the emergence of written discourse in young children. 5. Explain the role of both the family environment and the school context in the emergence of literacy.
General Competences
<ul style="list-style-type: none"> - Understanding and interpretation of scientific theories and concepts from the field of emerging literacy. - Transfer of scientific concepts to pre-school children. - Implementation of educational practices and methods with reference to the child's full development. - Autonomous Work - Critical Thinking

(3) SYLLABUS

The course focuses on effective instructional strategies for promoting reading and writing skills in young children, specifically targeting the preschool and early elementary ages. The course incorporates both theoretical foundations and practical application through examples, case studies and good practices.

Some of the main topics are:

- The foundations of literacy development
- The development of language and vocabulary
- Designing literacy-rich environments
- Good practices for creating shared reading and writing experiences
- Differentiated instructional approaches to reading and writing for different needs and abilities of students
- The importance of the family context and cultural environment
- Cultivating a love of reading for young children

This course, through writing life histories focuses on the future teachers' own reflection on their long process of acquiring literacy and their attitude towards future literacy as a lifelong relationship.

	3	4.5	
COURSE TYPE	Scientific field		
PREREQUISITE COURSES:	-		
LANGUAGE OF INSTRUCTION and EXAMINATIONS:	Greek		
IS THE COURSE OFFERED TO ERASMUS STUDENTS	YES		
COURSE WEBSITE (URL)			

(2) LEARNING OUTCOMES

Learning outcomes
<p>After completing the course, students will be able to:</p> <ol style="list-style-type: none"> 1. recognize the socio-cultural character and importance of the systemic conception of the learning process. 2. identify the characteristics and importance of the classroom climate and the organizational culture of the school in the learning process 3. describe the basic theoretical models that support the school-family-community connection and collaboration. 4. explain the different dimensions and functions of parental involvement 5. identify the characteristics of the modern open school as a vehicle for change and the skills of teachers to promote holistic development and well-being, on the basis of interaction with the family and the wider social environment 6. plan and evaluate activities and intervention programs that promote the positive climate in the classroom, the cooperation between teachers and collaboration with the family and the wider social environment. 7. develop research plans for the perceptions and practices of the stakeholders for the school-family-community connection and collaboration, the parental involvement, relationships and interactions in the classroom and the school community and the effectiveness of the relevant interventions.
General Competences

- *Transfer of scientific concepts to educational institutions for preschool children.*
- *Understanding the various factors that co-shape social and educational reality.*
- *Design, implementation and evaluation / self-evaluation of innovative educational programs in institutional and alternative educational spaces.*
- *Autonomous Work*
- *Critical Thinking*
- *Development of new research ideas*

(3) SYLLABUS

Modern pedagogical approaches emphasize the importance of the active participation of the children in the learning process focusing on existing knowledge and experiences, through activities that make sense to children and utilize their cultural capital. Emphasis is placed on the characteristics and importance of the social environment in the school community and the classroom, analyzing theoretical approaches, methodological trends and educational interventions for the functioning of relationships between children, children and teachers, and teachers among themselves. At the same time, with the development of a positive climate in the classroom and the school unit, teachers are therefore called to develop connections and collaboration with the family and the wider social environment. In this way, not only do they draw useful information for the child in order to form appropriate learning environments in the classroom, but also resources to enhance the quality of the educational process by developing relationships that support the educational work. In this way they enhance the "continuity" and quality of the child's experiences in all the contexts in which he / she participates. This "opening" of the school to the wider community is an important parameter for the school to be able to fulfill the new roles it is called to play as a player of social change, interested in the holistic development and well-being of the child. Teachers develop a positive attitude towards the dynamics that can have the family and social environment for the educational process and a collaborative culture, to acquire knowledge and skills to organize appropriate programs and interventions that promote interactions and positive relationships among all stakeholders involved. The course makes a brief reference to modern theories that highlight the need for developing partnerships in the educational context. Basic theoretical approaches to understand the conditions and procedures for collaboration in the context of strengthening children's education and school effectiveness are presented. The characteristics and skills of teachers that develop a positive classroom and school climate and enhance the interaction with the family and social environment are analyzed. Examples of applications and findings of relevant research are presented in order to highlight the factors that facilitate or hinder the cooperation in the school. Finally, students are asked to design their own activities / programs to strengthen the school-family-community relationship and classroom and school climate, or to do a small relevant research project.

Course modules

1. Modern theoretical approaches that support the need for cooperation among persons and contexts in the educational process (constructivist approach, differentiated pedagogy, ecological teaching model).
2. Theoretical models for the development of school-family-community connections (ecosystemic theory, model of overlapping spheres, developmental model for the school-family

relationship) and the parent-teacher relationship.

3. The concept and importance of parental involvement.

4. Characteristics and skills of teachers who support positive relationships in the classroom and at school and implement school-family-community collaboration programs, factors that facilitate or restrict cooperation and the development of relationships.

5. Presentation of examples / applications and empirical research on partnerships and the development of relationships (transition programs, parental involvement programs, cooperation programs with socio-cultural-educational institutions and education-related professionals, strategies to promote classroom and school climate).

(4) TEACHING and LEARNING METHODS - EVALUATION

DELIVERY	<p>Face to face</p> <p>The teaching will take place through discussion, lectures, with films and videos, through scripts. Material such as notes, electronic bibliography and suggested bibliography will be provided</p>

- *Critical, synthetic, creative thinking*

(3) SYLLABUS

Students are introduced to the interdisciplinary field of Social Pedagogy and realize its dynamic character, as it evolves in the context of tackling a variety of educational and social problems, shaping strategies that respond to the complexity of phenomena and the complex and fluid social reality. Basic theoretical dimensions, epistemological views and methodological issues are presented and the fundamental values and principles of Social Pedagogy are examined. Emphasis is placed on the connection with the modern school in general and the kindergarten in particular. In this context, research strategies, methodological practices and techniques are presented that support the socio-pedagogical role of the school / kindergarten, to promote learning, prosperity and social inclusion in ways that promote social justice.

Course modules

1. The multidimensional field, the roles and the interdisciplinary character of Social Pedagogy.
2. Basic principles and views, historical development and the modern international reality.
3. Methodological issues and priorities of Social Pedagogy
4. The socio-pedagogical role of the school / kindergarten, the teacher as a social pedagogue
5. Basic research strategies, methodological practices and techniques.
6. Development-evaluation of actions with preventive and / or interventional character in relation to important socio-pedagogical issues that manifest themselves in the school context.

(2) LEARNING OUTCOMES

Learning outcomes

After completing the course, students will be able to:

- 1) describe the basic dimensions related to important socio-pedagogical issues in preschool and primary education
- 2) identify the characteristics of socio-pedagogical methods that are suitable for approaching socio-pedagogical issues
- 3) recognize the characteristics and importance of innovation and creativity in the context of socio-pedagogical interventions
- 4) analyze the dimensions of socio-pedagogical issues in relation to the aims and content of education
- 5) develop/evaluate prevention or intervention educational programs and research designs in relation to important socio-pedagogical issues

General Competences

Understanding of the basic modern socio-pedagogical issues

- *Transfer of scientific concepts in the field of preschool education*
- *Design, implementation and evaluation / self-evaluation of innovative educational programs in institutional and alternative educational spaces.*
- *Autonomous work*
- *Critical, synthetic, creative thinking*

(3) SYLLABUS

The course briefly discusses contemporary theories that highlight the need for collaboration between contexts in the educational process. Basic theoretical approaches are presented for understanding the conditions and processes of collaboration between individuals and contexts, in the context of enhancing children's education and school effectiveness. The characteristics and skills of teachers that create a positive climate in the classroom and the school unit and enhance interaction with the family and social environment are analyzed. Examples of applications and findings of relevant research are presented with the aim of highlighting the factors that facilitate but also hinder collaborative relationships in school. Finally, students are invited to design their own actions/programs to strengthen the school-family-community relationship and positive relationships in school or to carry out a brief relevant research project.

(2) LEARNING OUTCOMES

Learning outcomes
<p>After completing the course, students will be able to:</p> <ol style="list-style-type: none"> 1) Be exposed, and to reflect on the, history, evolution and contemporary perceptions of STEM in preschool education 2) Recognize STEM as a comprehensive pedagogical approach for preschool children 3) Design and evaluate STEM activities and interventions using developmentally appropriate approaches 4) Integrate and align STEM pedagogy with other educational approaches.

General Competences

Exploring and investigating scientific ideas

Cultivating creative thinking and adopting experimental dispositions

Understanding the evolution of educational ideas and approaches over time

Development of cooperative and reflective abilities

Respecting the diversity and plurality of educational approaches

Recognizing critical thinking skills in planning, designing and implementing educational approaches

(3) SYLLABUS

This course is organized into three sections.

It first explores the history of ideas that promulgated and led to the debate, investigation, and adoption of the acronym STEM. The underlying reasons that led to a search for an integrated educational approach on the subjects included in STEM is studied from multiple perspectives.

In the second section, the pedagogical issues related to the integration of STEM subjects are examined in detail arguing that this integrated approach epistemologically and pedagogically is superior and more appropriate compared to the isolated silo approach to teaching and learning these subjects.

In the third section, STEM examples from different approaches such as problem-solving methodology, design, construction, and exploratory/discovery are presented, analyzed, and evaluated.

(Π 03 Y) Introduction to Linguistics: Analysis of the Greek Language

Instructor: Lydia Mitits, Assistant Professor

COURSE OUTLINE

(1) GENERAL

SCHOOL	School of Education Sciences		
ACADEMIC UNIT	Department of Education Sciences in Early Childhood		
LEVEL OF STUDIES	Undergraduate – 1 st Cycle of studies		
COURSE CODE	Π 03 Y	SEMESTER	2nd
COURSE TITLE	Introduction to Linguistics: Analysis of the Greek language		
INDEPENDENT TEACHING ACTIVITIES	WEEKLY TEACHING HOURS	CREDITS	
Lectures	3	4.5	
COURSE TYPE	General background		
PREREQUISITE COURSES:	X		
LANGUAGE OF INSTRUCTION and EXAMINATIONS:	Greek		
IS THE COURSE OFFERED TO ERASMUS STUDENTS	Yes		
COURSE WEBSITE (URL)	https://eclass.duth.gr/courses/ALEX04172/		

(2) LEARNING OUTCOMES

Learning outcomes
<p>After completing the course, students will be able to:</p> <ol style="list-style-type: none"> 1) recognize main concepts and terms within the field of linguistics, 2) exploit these concepts and terms in the analysis of the Greek language, 3) understand the social and communicative dimension of language, 4) recognize and critically approach widely accepted myths concerning language use and function.
General Competences
<ul style="list-style-type: none"> • Understanding and interpretation of scientific theories and concepts in the field of education • Understanding various factors involved in the formation of social and educational reality

(3) SYLLABUS

The aim of the course is to introduce students to the scientific approach to language by concentrating on the analysis of the Greek language and by attempting to debunk widespread inaccurate views and myths on language as a communicative resource and a social phenomenon. After a brief presentation of the functions of language and the subfields of linguistics, topics such as the following are discussed: the priority of oral discourse, writing systems, historical spelling, the concepts of “linguistic error” and language sign, semantic relations, and semantic change. Emphasis is also placed on pragmatic and sociolinguistic concepts such as speech acts, text, context, coherence, intertextuality, linguistic variability, style, register, anti-languages, dialects, language attitudes, and language standardization.

Sections of the course:

1. Introductory concepts – language myths – language as a communication code and a cognitive process
2. Phylogeny of language
3. Ontogeny of language
4. Areas of linguistic analysis: Phonetics
5. Phonetics of the Greek language
6. Areas of linguistic analysis: Phonology
7. Phonemic transcription and phonological rules of the Greek language
8. Areas of linguistic analysis: Morphology
9. Morphology of the Greek language
10. Areas of linguistic analysis: Syntax
11. Syntax of the Greek language
12. Areas of linguistic analysis: Semantics and Pragmatics
13. Semantics and Pragmatics of the Greek language

IS THE COURSE OFFERED TO ERASMUS STUDENTS	Yes		
COURSE WEBSITE (URL)			

(2) LEARNING OUTCOMES

Learning outcomes
<p>After successfully completing the course, students are expected to:</p> <ul style="list-style-type: none"> - Comprehend what is literature and its differences from other types of speech - Comprehend which sciences study it - The concept and significance of comparative literacy - Identify the difference between philology and literature critique - Introduce themselves to research methodology: identify research and critique gaps, bibliography update (hard copy and electronic), use of bibliography, bibliographical references. - Identify the beginning of modern Greek literature - Identify the most significant phases of modern Greek literature - Discern the different types of literature and trends - Comprehend the concept of literature generation and critically approach categorizations in Schools, Generations, etc. - Comprehend that developments in literature are interconnected with historical, social and cultural developments - Realize that main figures and trends in modern Greek literature correspond to similar ones in European literature - Obtain analytical tools for the examination of prose and poetry - Acquaint themselves with the work of significant writers - Comprehend the significance of minor cases and how they are discerned from others

General Competences
Portfolio management (bibliography, electronic sources, etc.) Search for, analysis and composition of data and information with the use of technological tools Acquaintance with the recent cultural history of Greece and Europe Promotion of critical and inductive thinking Ability to discern the different types of discourse Acknowledgement of the value of written and oral tradition

(3) SYLLABUS

<p>This comprehensive introduction to Modern Greek Literature aims to start with the problem of definition of the two main terms it comprises: "literature"(what is literature, on which basis can we define it, how it is connected and yet differentiated to other related terms) and "Modern Greek" (in order to use this term the main criterion for a text, oral or written, is its language, as well as a certain sense conveyed by it that we could call consciously Greek). Then we proceed to its disciplines: grammatology, philology and comparative literature. After offering an overview of the main Histories of Modern Greek Literature (K. Dimaras, L. Politis, M. Vitti, R. Beaton) and to their chronological and bibliographical limits we move to the core of this course, that is an outline of the history of Modern Greek Literature. We thus cover its emergence and evolution from its early beginnings till the modern era: the centuries that preceded The Ottoman Occupation, the golden period of the Renaissance in Crete, the various types of demotic songs or Modern Greek folk poetry, the 18th Century with its focus on matters of language and education rather than on mere literary issues, the School of Eptanisa and the central figures of D. Solomos and A. Kalvos, the Athenian version of Romanticism, Modern Greek prose writing (historic novel, short stories, ithografia, realism, naturalism), K. Palamas and the second generation of Athenian romanticism, C. P. Cavafy, the generations of 20s and 30s, the Post-War generation.</p>

(2) LEARNING OUTCOMES

Learning outcomes
<p>After the successful completion of the course the students should be able to :</p> <ol style="list-style-type: none"> 1. Recognize the importance of literature in the overall culture of children 2. Recognize and know the importance of the narrative elements of children's books (language, scenario, narrative voice, point of view, etc.) 3. Recognize and utilize the ideological/socializing role of children's books 4. Choose the appropriate children's book in every instance. 5. Recognize the special characteristics of Greek literature for children
General Competences
<ul style="list-style-type: none"> • Search for, analysis and synthesis of data and information, with the use of the necessary technology • Respect for difference and multiculturalism • Showing social, professional and ethical responsibility and sensitivity to gender

issues

- Working independently
- Understanding and interpreting concepts of literary theory. Applying such concepts in classes of children of pre-school age.
- Using literature in teaching environments

(3) SYLLABUS

1. The social/cultural context of the Greek literature for children from 1974 to today.
2. Intertextuality and Meta-fiction in the contemporary Greek literature for children
3. Ideological dimensions of contemporary literary works for children.
4. Analyses of selected works which fall under the following categories:
 - A. History, memory
 - B. Family, social problems
 - C. Alterity
 - D. Environment, Ecology

(2) LEARNING OUTCOMES

Learning outcomes
<p>After completing the course, students will be able to:</p> <ol style="list-style-type: none"> 1) discern the concepts of music education 2) compare key points of musical education systems and theories 3) design courses of song teaching for children and musical concepts and structures 4) perform songs for children correctly and with good quality 5) accompany rhythmically and melodically (sometimes) with simple percussion instruments a child's song 6) be able to teach (in a variety of ways) a child's song 7) develop the ability of good reading and writing music and basic elements of music theory and history, and make improvised musical instruments and use them
General Competences
<ul style="list-style-type: none"> • Understanding and interpreting scientific theories and concepts from the field of educational sciences

- Transfer of scientific concepts to pre-school children.
- Implementation of educational practices and methods with reference to the child's all-round development.
- Autonomous work
- Teamwork
- Respect for diversity and multiculturalism
- Respect for the natural environment
- Exercise of criticism and self-criticism
- Promote free, creative and inductive thinking

(3) SYLLABUS

This particular course concerns teaching music and children's singing. More specifically, it includes the following:

- Theories and perceptions of the most important music educators (C. Orff, Z. Kodaly, E. J. Dalcroze, etc.), the content of their systems in detail and their application in pre-school education through musical activities based on this.
- Parallel learning of children's songs (Greek and non-Greek) using mainly melodic percussion instruments, flute, rhythm instruments, piano accompaniment. Ways of teaching them to children in kindergarten. Exemplary Classroom and DVD Teaching.
- Construction of improvised musical instruments (Sieves, maracas, drums, bells, guitars, flutes, trumpets, tambourines, etc.) with simple materials (plastic bottles, paper boxes, pots, rubbers, balloons, canes, seeds and fruits, colored paper and cardboard etc.). Accompanying children's songs with the above improvised musical instruments.
- Introduction to the theory and history of music as well as the most basic musical forms.

(2) LEARNING OUTCOMES

Learning outcomes
<p>What does the term “museum education” mean? How does learning in the museum differ from that of other environments? Learning process includes facts, experiences and emotions. It requires an effort by the individual, yet it is also a social experience. Museum space offers that sort of social experience. Museum objects can prompt the senses and intellectual curiosity, attract attention via generating stories and eventually create a memorable and interactive learning experience. This module examines theoretical perspectives (i.e. learning theories in the museum) and practical ones (ie. educational activities) applied in the museum space focusing mainly in the early-year school groups.</p> <ul style="list-style-type: none"> • To introduce students to Museum Education basic theoretical perspectives and practical applications, • To acknowledge that Museums are alternative learning environments that support informal and non-formal education,

- To understand the close relationship between current theories of learning that support museum exhibitions and educational programming,
- To identify the varieties of educational activities organized by museums and the typologies of educational programmes.

General Competences

- Production of free, creative and inductive thinking
- Working independently
- Team work
- Decision-making

(3) SYLLABUS

- What is a museum today?
- Types of museums and collections
- The museum exhibition as an educational/didactic element
- What is museum learning
- Museum education and learning theories
- Museum education in Greece
- Museum and school relationships
- The role of the museum educator and interpreter
- Types of educational activities and programmes
- Organizing a school museum visit

(2) LEARNING OUTCOMES

Learning outcomes
<p>After completing the course, students will be able to: recognize the terms that affiliate to theatre action. Understand the pedagogical extension of a theatrical event and perceive the limits that discern activities that address to adults from those that address to children. To identify the standards and the ideology rates that characterizes the erudite and the popular spectacles for children (theatre, puppetry, shadow theatre). To acknowledge plays and playwrights, as conveyors of messages that are to be explored and be of good use by students in formal and non formal frames of education so as to facilitate their cognitive, aesthetic and emotional growth. To make puppets using a diversity of materials in many ways. They will be also able to create novel stories with themes related to the kindergarten and primary school children's interests. Additionally they can organize short puppetry</p>

events using the techniques of encouragement they have been taught.

Students will also be able to apply the knowledge and techniques of artistic creations to the pupils, to understand the importance of child expression through drawing and painting, as well as through any creative activities. To become creative and open minded to all activities that relate with the Arts and Culture, to be active observers at any artistic expositions and cultural activities. To become more social, to cooperate and communicate through non-verbal communication that Art offers. Students will be able to express themselves in artistic terms, to analyze, compose and choose the exact artistic and supervisor tools (color, fabric, pictures and paintings, drawings) so as to make their pupils connect with the natural world, the language and their own feelings. Students will also understand that art and the artistic expression is an important way of expression and communication between people, but also a tool of acquisition and consolation of knowledge. Lastly, they will be capable of making their own artistic creations being inspired by different eras and artistic streams and to put them in the teaching process of mathematics, language, environmental studies, etc. (interdisciplinarity).

They will also be able to:

- Plan, organize and implement for kindergarten pupils, an art education course with an interdisciplinary dimension.
- Recognize, utilize and apply special techniques at school, using materials and tools used in visual arts.
- Observe, describe, analyze and interpret a work of art, compare it with others, understand and describe the differences and similarities, in order to use it in the lesson.
- Plan, organize and implement a lesson of approaching the visual art project in an experiential way.
- Recognize the stages of development of children's drawing and its communicative character, as well as the value of visual expression for the all-round and balanced development of the child's personality.
- Understand and utilize the psychotherapeutic effect of the arts and their importance in educational practice.

General Competences

- Production of free creative thought, activation of imagination, grouping and collaboration
- Autonomous work
- Acquisition of theoretical and practical base so that the student can apply this knowledge to the framework of preschool culture and education

(3) SYLLABUS

The specific course consists of two modules: (a) Puppet Theatre for Children and (b)

Aesthetic Education.

Puppet Theatre for Children

Through the combination of theory and practice, the following are covered:

Kinds of shows for children. Theater for children in Greece and the relationship of theatrical texts with their era. From text to performance: theatre techniques and their implementation, role analysis, rules and codes of theatre texts. Examples of activities like: expressiveness and creativity through miming and pantomime, voice training and breathing, improvisations and role playing, creating environment for action, puppet making, methodology for writing a short play.

Aesthetic Education

By following an experimental and playful action, the lesson is an introduction to the basic elements of the artistic conformation (point-line-shape-level-color-space-synthesis) that aims to the knowledge of the alphabet of the artistic language and to the ability to create original artistic creations.

The contact of the students with important artistic streams and creations made in different eras of history, offers them knowledge and examples of the use of the Artistic Language in different eras. The experiential approach offers a direct contact, interpretation and understanding and works as a source of inspiration for their own artistic creativity.

Students will not only acquire skills through their contact with different painting techniques, tools and other means of craft but also ways they can organize their work and create a drawing lab in the classrooms and tools that will help them succeed in their teaching practice. The module also focuses on the understanding of the language of paintings and the ways children express themselves through drawings that shape up during their childhood and make us understand their feelings and thoughts.

(2) LEARNING OUTCOMES

Learning outcomes
Students after completing the module will be able to: <ol style="list-style-type: none"> 1. Organize a theatre game activity 2. Co-ordinate theatre activities in the kindergarten 3. Use drama activities to start or evaluate an educational procedure 4. Select appropriate texts and tales to dramatize 5. Turn narratives into plays 6. Perform a story on stage 7. Move from narration to dramatization together with the students
General Competences
<ul style="list-style-type: none"> • Team work • Implementation of theatre practices to convey creative and empirical ways of teaching and learning • Presentation of a narrative by using methods of drama

- The students create, choose, act and response to stimuli, adapt to different needs and situations, adjust play material to students' needs

(3) SYLLABUS

Drama activities and dramatization are included in theatre practice. They aim to promote alternative approaches of applying knowledge, as they rely to physical, emotional and oral expression. Both dramatic play and dramatization are appreciated to be acts of enjoyment, cooperation and creativity. The structure of the lessons supports empirical activities so as students can gain good insight of the module and be able to apply the practice to their future teaching work.

The lesson aims to acknowledge games as means of expression, of manners and feelings; Build activities by using physical and oral expression; Act through space and time, use materials, play role games; Change a narrative into action; Understand the means and techniques of dramatization; Appreciate the criteria for selecting a text or a situation. Get from narration to action; Discover the role of the teacher as a trainer in drama; Apprehend the effect of lighting and music, costumes and masks, make up in drama;

<p>After successfully completing the course, students are expected to:</p> <ul style="list-style-type: none"> • Comprehend basic concepts related to creative writing and the theory of literature • Have developed the skills of analysis, interpretation and critical reading of a literature work • Have exercised in ways to work out the meaning of a text in order to function as creative readers and/or writers ☒ • Combine theory with practice through applications and techniques of creative writing • Have explored possibilities of writing expression and reading enjoyment and to be able to use writing as a tool of reflection, personal and professional development and empowerment • Have become aware of practices for enhancing the young children's relation to literature and to have developed the ability to apply the aforementioned practices in early childhood education.
General Competences

- Promotion of free creative thought
- Adjustment to new situations
- Decision making
- Autonomous work
- Teamwork, collaboration
- Project design and management
- Critical assessment and self-assessment
- Respect to diversity and multiculturalism, awareness of gender issues

(3) SYLLABUS

The course involves the modern theoretical context of creative writing. Simultaneously, it involves issues about the creative dimension of the intercombined processes of reading and writing. It explores the possibilities of imaginative and original production and synthesis of discourse by applying creative writing processes and techniques as used in different types of text (literature, poetry, autobiography, essay, etc.). It proposes applications and practices acquainting future teachers with the use of creative writing techniques in classroom. Students will obtain experiences of creative expression techniques and ideas for using a wide range of writing practices in an educational context.

(4) TEACHING and LEARNING METHODS - EVALUATION

DELIVERY.	Face to face	
USE OF INFORMATION AND COMMUNICATIONS TECHNOLOGY	PowerPoint presentations, Online Digital Storytelling Tools, Interactive Whiteboard to share resource links, course files, Artificial Intelligence (AI) Tools for Writing Text	
TEACHING METHODS	Activity	Semester workload
	Lectures	39
	Study/analysis of bibliography	30
	Literature creation	66
	Course total	135
STUDENT PERFORMANCE EVALUATION	<p>Language of evaluation: Greek</p> <p>Methods of evaluation: Portfolio (100%)</p> <p>Evaluation criteria Completeness of content (20%) Quality of works (literary, linguistic, aesthetic) (20%) Originality and creativity (20%)</p>	

	<p>Format (20%) Oral support presentation skills (20%) are also included in the formation of the final score</p> <p>The evaluation criteria are also announced in detail in the eclass of the course.</p>

(2) LEARNING OUTCOMES

Learning outcomes
<p>This module focuses on museum education in practice and examines all types of museum educational programmes. It reviews Greek and international examples of museum educational activities (i.e. purpose, aims, content, didactic approach). It, also, analyses the varieties of museum educational materials (e.g. student sheets, children’s museum guides, museum kits, material for school groups etc), and the methods and techniques utilized to design such materials. Other themes treated in this module include the following: museum websites with educational content, the “project” as method, and community outreach. Particular importance is given to the relationship between museums and schools.</p> <p>This modules aims at introducing students to museum education in practice, the importance of the museum educator in assisting children-visitors to interpret museum objects and the approaches utilized to evaluate museum educational programmes. During this course, students will participate in museum visits, prepare short presentations on museum education topics and attend workshops on how to design museum educational materials.</p> <ul style="list-style-type: none"> • To understand the applications of Museum Education theory to the museum

education practice

- To examine further the relationship between museums and schools
- To examine all types of possible museum education programmes and activities
- To analyse the layout of museum education programmes
- To examine varieties of museum learning materials
- To be able to compose drafts of learning materials for potential use in the museum

General Competences

- Production of free, creative and inductive thinking
- Working independently
- Team work
- Production of free, creative and inductive thinking
- Decision-making
- Project planning (ie. Museum education projects)

(3) SYLLABUS

- Learning in the museum
- Museum visitors and the learning experience
- Types of museum activities and learning strategies
- Types of learning materials and content analysis
- Role of interpreter/facilitator in the learning process
- The school museum interaction
- Steps for designing programmes and learning materials for museums
- Evaluating the museum school visit

(2) LEARNING OUTCOMES

Learning outcomes
<p>After successfully completing the course, students are expected to:</p> <ul style="list-style-type: none"> - Comprehend the significance of bildung especially as pedagogical students and future teachers. - Obtain knowledge about the international tradition of bildungsroman, classical and less known writers per country. - Discern variations according to the corresponding national tradition. - Comprehend, identify and classify visual and text narratives belonging in the specific type of narrative. - Comprehend the range of bildung in modern Greek literature. - Comprehend why the specific form of literature is used very frequently in the Generation of the 1930s and also why and how it evolves and is shaped throughout the course of time - Observe analytical interpretive approaches to bildungsroman - To analyze prose work based on the course syllabus - Develop their critical thinking ability about issues regarding the course
General Competences
<p>Search for, analysis and composition of data and information with the use of appropriate technological tools Autonomous and group work Εργασία σε διεθνές περιβάλλον</p>

Production of new research ideas
Promotion of free, creative and inductive thinking

(3) SYLLABUS

Negotiating issues of initiation, conformation, apprenticeship (not only in the narrow pedagogical sense but with the wider sense of knowledge that is experience or that of the attempt to integrate the young hero into different environments), divided between two traditions, that of individualism and that of "socialization", reconciliation with the self and the world, showing the multiple spaces of friction or even conflicts leading to one direction or another (school, family, study, work, art, love and love relationships), and especially closely linked to the rise of the bourgeoisie, the apprenticeship novel has almost come to be identified with the story of the novel in general.

It is a special kind of novel, which is inaugurated throughout Europea with the Wilhelm Meister's Apprenticeship by Johann Wolfgang von Goethe (1795-6), which presents a tremendous tradition in individual national literatures and a prominent representation in Greek (G. Theotokas, M. Lyberakis, Terzakis, L. Nakou, P. Prevelakis and others).

We will look at such narratives unfold the problems of adolescence and youth, observing heroes that in the time span of these novels gradually become by adolescent teenagers and in the end, having reached the threshold of adult life, are ready to live their own novel. The end of these novels therefore marks a new beginning, the entry into (adult) life. What happens, however, when adulthood stays stubbornly in brackets? What kind of shelter can the art or the aesthetics provide to such teenagers in modern times in modern fictional versions of the genre where the ideological-political foundations have collapsed?

We will also look at such works that may be part of extended circles, but allow us to see that the modern limits of youth have shifted or enlarged, and in particular offer the opportunity of a first acquaintance with modern writers.

(Π 40 E) Subversive Narratives of Childhood*Instructor: Sophie Iakovidou, Associate Professor***COURSE OUTLINE****(1) GENERAL**

SCHOOL	School of Education Sciences		
ACADEMIC UNIT	Department of Education Sciences in Early Childhood		
LEVEL OF STUDIES	Undergraduate – 1 st Cycle of studies		
COURSE CODE	Π 40 E	SEMESTER	3 rd
COURSE TITLE	Subversive Narratives of Childhood		
INDEPENDENT TEACHING ACTIVITIES	WEEKLY TEACHING HOURS	CREDITS	
Lectures	3	4.5	
COURSE TYPE	Scientific Knowledge		
PREREQUISITE COURSES:	X		
LANGUAGE OF INSTRUCTION and EXAMINATIONS:	Greek		
IS THE COURSE OFFERED TO ERASMUS STUDENTS	Yes		
COURSE WEBSITE (URL)			

(2) LEARNING OUTCOMES

Learning outcomes
<p>After successfully completing the course, students are expected to:</p> <ul style="list-style-type: none"> - Know the differences between the new Sociology of Childhood and its traditional approaches - Know the leading social representations about children and how to critically approach them - Discern what dipoles such as adult vs child, social vs natural offer and how they guarantee the control or dominance of the former over the latter - Recognize that the subversive representations of childhood are in contrast to truths we persist to be quiet about - Become familiar with certain of the greatest figures of modern Greek prose of the 19th and 20th century - Become familiar with the context of modern Greek literature prose during the previous two centuries - Discern the different narrative ways, literature types and trends such as realism, naturalism, modernism, etc. - To acquaint themselves with the work of some of the most pioneering writers in modern Greek literature that are internationally known - Be able to analyze literature and other types of text - Find out that the appropriate style and content may contribute positively to reading response - Obtain ideas about the educational applications of creative writing
General Competences

Students realize that typical social representations create stereotypical images of children and how to critically approach them

Students understand that “subversive representations of childhood” correspond to truths that we persist to ignore or taboos

Comprehension and interpretation of scientific theories and concepts of the New Sociology of Childhood and the broader Sciences of Education and their application in early childhood education

Comprehension of the various factors that co-shape the social and cultural reality

Acquaintance with a wide range of texts involving children

Application of educational practices and methods that have as a focal point the child’s holistic development, its personal rhythms and its perspectives of integration in the cultural environment

(3) SYLLABUS

Our venture in 20th century prose will focus primarily in the exploration of its hermeneutical dynamics. The deeper comprehension of individual texts on the one hand and the evaluation of the main elements that constitute the whole body of a writers’ work on the other, will tend to raise an array of different issues, of a wider, cultural order: the relation between literature and sociopolitical condition, between literature and ideology, literature and other types of art, the function of literature as a privileged vehicle for the expression of desire, the dialogic imagination of literature and in particular of prose writing will be the main axes of our approach. Without leaving aside strictly grammatological issues such as literary generations, literary genres or aesthetic movements, the inner core of this course will mainly consist in its interdisciplinarity. In the same time it aims to familiarize the audience with various tools and critical methods that can help, reinforce and extend textual analysis, not only the literary one. In order to achieve this program, our analysis won’t be limited in the literary canon. It will also cover minor texts, as well as others that stand “on a slight angle” towards what is traditionally considered as literary (such as essay, biography, journalism etc) in an attempt to highlight the modern blurring between different modes of writing. This will hopefully offer a view to contemporary prose, and most probably to all the previous century leaves for the current one.

(2) LEARNING OUTCOMES

Learning outcomes
<p>After successfully completing the course, students are expected to:</p> <ul style="list-style-type: none"> - Acknowledge the peculiarities of poetic discourse - Analyze and interpret the major figures of our poetic and our broadly cultural tradition (Kavafis, Karyotakis, Seferis, Elytis, Empeirikos, Egonopoulos and other figures of the Generation of the 1930s and the poetry after WWII) - Discern differences among various categories - Discern trends and artistic currents - Realize the relation between the different arts and their interaction with social developments - Comprehend that poetic developments are part of the broader cultural, historic and social shifts - Make grammatical separations among generations and comprehend the continuations and renewals - Discern the difference between tradition and modernity, Greekness (and corresponding European ideologies) and internationalism - Comprehend the most important manifestations of our cultural history and how they developed during the 20th century - Comprehend how the tools and concepts in the course are applied in other arts (painting, architecture, cinema) or other views of life
General Competences
<p>Expansion of reading reflections Critical ability</p>

Comprehension of different spacetime phases
 Creative use in learning environments
 Decision making
 Critical ability
 Promotion of free, creative and inductive thinking
 Autonomous work

(3) SYLLABUS

Take my word

Give me your hand

Empirikos' tiny little poem most probably evokes everything poetry tends to provoke, while addressing an open invitation to its public. Our course will tend to catch the different tonalities of poetic discourse: the cavafian "words that tell and hide", Kariotakis' corrosive sarcasm – is he a form of tomb for Megali idea and other great expectations? -, the so called "myth" of the generation of the 30s – did / does Greece really possess a genuine cultural core of its own that would permit an active communication with the international scene, as this much reputed generation tended to demonstrate? What is Greece's cultural identity according to this generation? Are there any words to be found after the horror of a War and indeed after a civil grief? What happens to struggles when they face the bitterness of defeat and to political beliefs when their ideological basis tends to fall apart? What are the dynamics and limits of a discourse like poetry, especially when it constantly eroticises with silence? And what if the 20th century persistently defied its relation to any sort of meaning?

(2) LEARNING OUTCOMES

Learning outcomes
<p>After completing the course, students will be able to:</p> <ol style="list-style-type: none"> 1) distinguish the concepts of active listening music and creative musical processes 2) Design and perform musical teachings 4) create improvised musical games 5) perform an instrumental accompaniment for a fairytale, a poem, a literary text 6) compose their own melodies and improvise 7) develop the ability of good musical reading and writing
General Competences
<ul style="list-style-type: none"> • Understanding and interpreting scientific theories and concepts from the field of educational sciences • Transfer of scientific concepts to pre-school children.

- Implementation of educational practices and methods with reference to the child's all-round development.
- Autonomous work
- Teamwork
- Respect for diversity and multiculturalism
- Respect for the natural environment
- Exercise of criticism and self-criticism
- Promote free, creative and inductive thinking
- Exercise of criticism and self-criticism
- Production of new research ideas

(3) SYLLABUS

Interdisciplinary activities concerning music and other teaching subjects (language, mathematics, geography, art, etc.). They include creative musical processes such as singing, rhythm and movement, performing on simple musical instruments, music reading and writing, use of hand-made musical instruments and toys.

Emphasis is laid on active music listening applied to all musical genres: Greek Music (artistic, folk, traditional), western music (classical, contemporary, jazz, rock) music of other cultures (Indian, Chinese, Latin American, African, etc.), children's songs.

Emphasis is laid on equally to the use of music in the fairy tales: songs, compositions, background music, narration and partial dramatization of well known children's fairy tales and well known musical compositions.

(2) LEARNING OUTCOMES

Learning outcomes
<p>After completing the course, students will be able to:</p> <ol style="list-style-type: none"> 1) Describe the composition of a simple instrumental class set 2) Distinguish notes, keys, tempos 3) Combine 2-5 melodic and rhythmic musical instruments 4) Design a musical course using simple musical instruments 5) Interpret children's songs with musical instruments and voices 6) Interpret simple compositions of other historical musical seasons with musical instruments and voices 7) Composing and improvising on their own melodies 8) Develop rhythmic and motor skills

General Competences

- Understanding and interpreting scientific theories and concepts from the field of educational sciences
- Transfer of scientific concepts to pre-school children.
- Understanding the various factors that reconcile social and educational reality. Implementation of educational practices and methods with reference to the child's all-round development.
- Search, analyze and synthesize data and information, using the necessary technologies
- Adapt to new situations
- Decision making
- Autonomous work
- Teamwork
- Respect for diversity and multiculturalism
- Respect for the natural environment
- Demonstrate social, professional and ethical responsibility and gender awareness
- Exercise of criticism and self-criticism
- Promoting free, creative and inductive thinking

(3) SYLLABUS

The creation of small and large musical ensembles in kindergarten strengthens individual expression and enhances team collaboration for better sound effect and thus requires specific knowledge of music such as the following: recorder, metallophon, xylophone, small rhythmic percussion instruments, body percussion, singing, basic element of rhythmic in music, basic element of musical improvisation.

All these elements will be intergraded in the context of courses referring to music offered in the curriculum and strengthen "team musical spirit".

(2) LEARNING OUTCOMES

Learning outcomes
<p>After the successful completion of the course the students should be able to :</p> <ol style="list-style-type: none"> 1) Understand the special nature of literary books for children. 2) Be in a position to judge which age of readers a book addresses itself to. 3) Pinpoint those aspects of a literary book which help portray its implied reader. 4) Suggest books appropriate for specific children and for a specific pedagogical or other use.
General Competences
<ul style="list-style-type: none"> • Search for, analysis and synthesis of data and information, with the use of the necessary technology • Respect for difference and multiculturalism • Showing social, professional and ethical responsibility and sensitivity to gender issues • Working independently

- Understanding the function of the implied reader and pinpoint those aspects of a literary book which portray such a reader.

(3) SYLLABUS

How can an adult judge whether a “children’s” book is appropriate for children and what kind of children is it appropriate for?

How helpful is in that direction the concept of the implied reader?

What is the relation between the implied and the real reader of a text/ book?

Is there an implied viewer in the case of pictures? How can one discern its characteristics?

To show the above, we will examine a wide range of books for children.

(2) LEARNING OUTCOMES

Learning outcomes
<p>After the successful completion of the course the students should be able to:</p> <ol style="list-style-type: none"> 1. Recognize the basic concepts and definitions in the field of pragmatics 2. Learn that pragmatics studies: <ul style="list-style-type: none"> - Speaker's meaning - Meaning in context - Implicatures - Relative distance 3. Analysis of child speech from corpus data 4. Assessment of pragmatic linguistic functions of monolingual and bilingual preschool children
General Competences
<ul style="list-style-type: none"> • Understanding and interpreting scientific theories and concepts from the field of educational sciences. • Transfer of scientific concepts to the education of preschool children. • Understanding various factors that shape social and educational reality.

(3) SYLLABUS

The course starts with the presentation of the central concepts in the study of pragmatics, such as context, utterance, speech act, cooperative principle, implicature and deixis. Next, we investigate speech analysis, mainly conversation analysis and critical speech analysis (particularly of child narrative) on particular examples from the Greek language. The main aim is to raise students' awareness of how communicative competence can help organize and use language more successfully in various social settings and contexts and how they can help preschool children develop it. Special attention is paid to language learning/use strategies in L1 and L2 and how teachers can help their students become autonomous and self-regulated learners starting from preschool.

Sections of the course:

1. Deixis
2. Speech acts
3. Implicature
4. Speech analysis principles
5. Conversation analysis
6. Child speech
7. Child narration
8. Child speech corpora
9. Pragmatic ability of bilingual children
10. Language learning/use strategies in L1 and L2
11. Teaching language learning strategies in preschool
12. Assessment of pragmatic linguistic functions of monolingual/bilingual children
13. Presentation of projects

Sciences (Θ)

(Θ 01 Y) Basic Concepts of Mathematics (for admissions up to 2022-23)

Instructor:

COURSE OUTLINE

(1) GENERAL

SCHOOL	School of Education Sciences		
ACADEMIC UNIT	Department of Education Sciences in Early Childhood		
LEVEL OF STUDIES	Undergraduate – 1 st Cycle of studies		
COURSE CODE	Θ 01 Y	SEMESTER	1st
COURSE TITLE	Basic Concepts of Mathematics		
INDEPENDENT TEACHING ACTIVITIES		WEEKLY TEACHING HOURS	CREDITS
		3	4.5
COURSE TYPE	<i>Scientific Knowledge</i>		
PREREQUISITE COURSES:	x		
LANGUAGE OF INSTRUCTION and EXAMINATIONS:	Greek		
IS THE COURSE OFFERED TO ERASMUS STUDENTS	Yes		
COURSE WEBSITE (URL)			

(2) LEARNING OUTCOMES

Learning outcomes
After completing the course, students will be able to: 1) Recognize 2) Explain 3) Produce 4) Develop the basic concepts of the Mathematical Science
General Competences
1. Adapting to new situations 2. Decision-making

3. Production of new research ideas
4. Criticism and self-criticism
5. Production of free, creative and inductive thinking

(3) SYLLABUS

The purpose of the course is to introduce mathematical thinking according to the main object of algebra. In the course the following units are developed:

- Elements of Set Theory
- Cartesian Product
- Binary Relations
- Functions
- Introduction to Mathematical Logic
- Numeration Systems with emphasis on binary system base two

(4) TEACHING and LEARNING METHODS - EVALUATION

DELIVERY	<i>Face-to-face</i>	
USE OF INFORMATION AND COMMUNICATIONS TECHNOLOGY	E-mail	
TEACHING METHODS	<i>Activity</i>	<i>Semester workload</i>
	Lectures	26
	Practice	13
	<i>Independent study</i>	96
	<i>Course total</i>	135
STUDENT PERFORMANCE EVALUATION	<p>Language of evaluation: Greek</p> <p>Methods of evaluation (weight %): Final written examination (100%)</p> <ol style="list-style-type: none"> 1. Problem solving (70%) 2. Short answer questions (30%). <p>Evaluation criteria of written examination:</p> <p>Content (60%)</p> <p>Critical thinking (30%)</p> <p>Structure (10%)</p>

COURSE WEBSITE (URL)			

(2) LEARNING OUTCOMES

Learning outcomes
<p>After completing the course, students will be able to:</p> <ol style="list-style-type: none"> 1. Understand the composition and functioning of the natural environment as well as the interrelationships between natural phenomena 2. Study basic concepts of environmental sciences 3. Become concerned about the anthropogenic factors that create or enhance environmental problems. 4. Recognize the concept of sustainable operation of the environment 5. Study the environment as a system and analyze related problems with systemic thinking. 6. Recognize contemporary pressing environmental problems and analyze their environmental / ecological processes and mechanisms 8. Evaluate the importance of energy production and consumption in the perspective of sustainability 9. Link environmental pollution to quality of life 10. Recognize the interdependence between human activities and environmental quality

11. Become concerned about socio-economic conditions as causes for the creation and / or enhancing of environmental problems
12. Become concerned about the modern way of life at individual and social level and the impact on environmental quality
13. Examine critically the causes and effects of environmental problems on nature and on human societies
14. Examine environmental problems in the context of environmental justice and social inequalities
15. Assess the relationship between environmental quality and social inequalities
16. Evaluate the role of human activities and choices in the quality of the environment
17. Design, implement and evaluate specific interventions to educate individuals (children and adults) about the environment and sustainability in formal and non-formal education
11. Assess the relationship between environmental quality and social inequalities
12. Evaluate the role of human activities and choices in the quality of the environment
13. Suggest specific pedagogical methods for the education of people (children and adults) for the environment and sustainability in formal and non-formal education
14. Propose strategies to raise awareness of the environment and related issues
15. Describe and apply the basic principles governing educational material for the environment, environmental issues and problems in the context of modern environmental education and sustainability trends.
16. Evaluate the role of human activities and choices in the quality of the environment
17. Design, implement and evaluate specific interventions to educate individuals (children and adults) about the environment and sustainability in formal and non-formal education

General Competences

- Respect for the natural and man-made environment
- Cultivation of Sustainable Values
- Critical study of environmental problems
- Social participation
- Search, analysis and synthesis of data and information, using the necessary technologies as well
- Adaptation to new situations related to the development of environmental quality
- Making decisions to address environmental problems for the sustainable functioning of the environment and human societies
- Autonomous work
- Work in an interdisciplinary environment
- Respect for diversity and multiculturalism
- Exercise of criticism and self-criticism
- Promote free, creative and inductive thinking

(3) SYLLABUS

The module aims to analyse the most pressing contemporary environmental issues and

problems including air pollution, climate change, the degradation of natural resources, energy, the greenhouse effect, the depletion of ozone layer, water pollution as well as the waste management. The students also practice using different educational methods towards the critically analysis of the above mentioned environmental problems. They are also practice for the implementation of educational methods for integrating environmental issues in the pre-school and primary education.

(4) TEACHING and LEARNING METHODS - EVALUATION

DELIVERY	<i>Face-to-face</i>	
USE OF INFORMATION AND COMMUNICATIONS TECHNOLOGY	Presentations Movies and Documentaries Eclass E-mail Video Production by students Laboratory exercises for implementation of e-learning applications consisting of interactive learning activities addressed to early childhood (photostory / digital stories)	
TEACHING METHODS	Activity	Semester workload

(2) LEARNING OUTCOMES

Learning outcomes
<p>Students after the successful completion of the course will be able to:</p> <ol style="list-style-type: none"> 1) Explain principles, functionalities and services of Informatics with applications in education, 2) Distinguish the main components of a computing system, categories of software, memory types, I/O unit types, 3) Explain the role of software and other technological resources in education, 4) Explain the definition of educational technology, justify the integration of technology of education, interpret primary issues regarding educational technology, explain lessons involving educational technology that have been derived from the past and the role of the teacher regarding educational technology, 5) Explain the main factors affecting the integration of technology in education and also explain main types of educational activities in early childhood education using technological

resources,

6) Explain main aspects of robotics,

7) Implement e-learning applications consisting of interactive educational activities for early childhood by using a corresponding authoring tool and to use basic Web tools for information retrieval.

General Competences

1) Search for, analysis and synthesis of data and information, with the use of the necessary technology

2) Working independently

3) Working in an interdisciplinary environment

4) Production of free, creative and inductive thinking

5) Transfer of scientific concepts in educational settings involving early childhood

6) Implementation of educational practices and methods focusing on the overall development of the child.

(3) SYLLABUS

This course constitutes an introduction to basic principles of Informatics and educational technology. It consists of theory and lab exercises. The theoretical part of the course involves issues such as the following: introductory concepts, main computing components, introductory issues concerning algorithms and the design of simple algorithms for creating multimedia applications, introduction to main types of software and its role in education, introductory aspects involving educational technology (i.e., arguments justifying its integration in education, primary social, technical and educational issues connected with it, lessons learnt from the past, role of the teacher, factors affecting the integration of technology in education, etc.), control technology and programmable toys, educational programming languages, main types of educational activities in early childhood education based on technological resources, introduction to robotics, Informatics in Greek education. The lab mainly involves familiarization with: (i) an authoring tool for implementation of interactive educational activities for children in early childhood and (ii) main Web tools for retrieval of relevant data. Lab activities are implemented in small groups in the Laboratory of Informatics.

(2) LEARNING OUTCOMES

Learning outcomes
<p>After completing the course, students will be able to:</p> <p>(1) Design, implement and evaluate teaching experimental interventions for pre-school education of preschool children in the natural sciences</p> <p>(2) Observe a phenomenon of the natural sciences and form questions about its mechanism</p> <p>(3) Make assumptions to answer the questions arising from the study of a phenomenon</p> <p>(4) Identify variables related to the study topic and control them</p> <p>(5) Identify the data generated by the experiment, organize and use the data to explain the phenomenon studied.</p> <p>(6) Convey the data and conclusions of the experimental application using tables, diagrams and charts</p> <p>(7) Experimentally examine the mechanism of a phenomenon</p> <p>(8) Identify the natural entities associated with the phenomenon and identify relationships</p>

between them

(9) Explain the mechanism of a physicochemical phenomenon

(10) Identify their own alternative ideas about a physicochemical phenomenon being studied and reject or accept on the basis of experimental data

General Competences

- Develop an interest in the study of natural sciences
- Develop a positive attitude in the scientific research process and research
- Develop co-operation among members of a group to achieve a common goal
- Develop communication between the members of a group through the exchange of ideas and knowledge about the phenomena of study for drawing conclusions and explaining them
- Conveying of scientific concepts and theories of teaching and learning of natural sciences to formal and non-formal education of pre-school children.
- Search, analyze and synthesize data and information, using the necessary technologies to apply concepts of natural sciences to preschool age
- Cultivation of scientific thinking skills
- Development of critical thinking
- Development of decision-making capacity
- Working in an interdisciplinary environment
- Working in groups / developing cooperation and communication skills
- Promote free, creative and inductive thinking

(3) SYLLABUS

The module aims to help students to examine scientific concepts and phenomena and practice using different educational methods. Scientific concepts and phenomena of physics, chemistry, ecology and biology, such as magnetism, electricity, thermodynamics, material, the human body, water cycle, weather, terrestrial and water ecosystem, plant's growth are also discussed. Students practice the experimental method for examining the different factors involving in the above mentioned concepts and phenomena.

(2) LEARNING OUTCOMES

Learning outcomes
Students after the successful completion of the course will be able to:
1) Explain primary issues combining learning theories and technology and to support corresponding strategies of technology integration,
2) Analyze methods of using technology in teaching and learning of knowledge fields,
3) Explain ways of using software tools in teaching and learning and to design ways of integrating multimedia in teaching and learning,
4) Use open source software tools for basic image processing, digital painting for early childhood, educational programming environments and development of educational multimedia applications for early childhood.
General Competences
1) Search for, analysis and synthesis of data and information, with the use of the necessary technology
2) Working independently
3) Working in an interdisciplinary environment

- 4) Production of free, creative and inductive thinking
- 5) Transfer of scientific concepts in educational settings involving early childhood
- 6) Implementation of educational practices and methods focusing on the overall development of the child.

(3) SYLLABUS

The course provides background involving the integration of ICT in education and the implementation of educational multimedia applications. The course consists mainly of lab exercises. The lab exercises involve familiarization with education software for early childhood (available from the Ministry of Education, open source software), image processing with open source software, digital painting for early childhood with open source software, educational programming environments and authoring of multimedia applications for early childhood using open source software.

(4) TEACHING and LEARNING METHODS - EVALUATION

(2) LEARNING OUTCOMES

Learning outcomes
Students after the successful completion of the course will be able to: 1) Explain primary issues about the integration of ICT in early childhood, 2) Analyze case studies of ICT integration in early childhood education, 3) Use software tools to create multimedia items and develop educational multimedia applications, 4) Use robotic tools in the context of early childhood education, 5) Explain main aspects concerning AI and its role in education.
General Competences
1) Search for, analysis and synthesis of data and information, with the use of the necessary technology 2) Working independently

- 3) Working in an interdisciplinary environment
- 4) Production of free, creative and inductive thinking
- 5) Transfer of scientific concepts in educational settings involving early childhood
- 6) Implementation of educational practices and methods focusing on the overall development of the child.

(3) SYLLABUS

The course provides background knowledge involving the integration of ICT in early childhood education. More specifically, issues concerning multimedia technologies, digital storytelling, robotics and AI will be discussed. The course consists of theory and lab exercises. The theoretical part of the course discusses case studies on using ICT in early childhood. The lab involves acquisition of skills in using tools for creating multimedia items and developing educational multimedia applications, robotic tools for early childhood and AI tools.

(2) LEARNING OUTCOMES

Learning outcomes
<p>After the successful completion of the course, students will be able to:</p> <ol style="list-style-type: none"> 1) Understand basic mathematical ideas and integrate them into the daily routine of the classroom 2) Understand how children learn and think in math, through a cognitive, developmental perspective. 3) Assess the mathematical knowledge of children of this age and plan appropriate activities. 4) Develop a well justified understanding of developmentally appropriate teaching methods and curricula. 5) Design and evaluate the development of mathematical knowledge in all areas of action at school, ensuring access to this development for all pupils.
General Competences
Especially:

- Understanding and interpreting the scientific theories and concepts that characterize the field of Didactics of Mathematics
- Utilizing the scientific theories and concepts that characterize the field of Didactics of Mathematics in initiating early childhood children into mathematics.
- Understanding the multiple factors (cognitive, social, cultural and political) that shape the mathematical education of the early childhood children.
- Implementing educational practices and methods in the teaching practice, aiming at the development of mathematical thinking in ways that ensure the child's full development.

Generally:

- Identify, analyze, and synthesize data and information that support educational practice, using digital technologies.
- Making decisions about the educational process.
- Composing and exercising a critical view of the educational act.
- Promoting free, creative and inductive thinking on issues of development and education for pre-school children.

(3) SYLLABUS

- Mathematical knowledge and thought at first school age
- Learning mathematics in the first school age: modern learning theories
- Social and cultural parameters of mathematical education in the first school age
- Teaching practices in mathematics in the first school education
- Mathematical activities and their management in the first school age
- Evaluation in mathematics of first-time education.

COURSE WEBSITE (URL)			

(2) LEARNING OUTCOMES

Learning outcomes
<p>After completing the course, students will be able to:</p> <ol style="list-style-type: none"> 1. Understand the composition and functioning of the natural environment as well as the interrelationships between natural phenomena 2. Study basic concepts of environmental sciences 3. Become concerned about the anthropogenic factors that create or enhance environmental problems. 4. Recognize the concept of sustainable operation of the environment 5. Study the environment as a system and analyze related problems with systemic thinking. 6. Recognize contemporary pressing environmental problems and analyze their environmental / ecological processes and mechanisms 8. Evaluate the importance of energy production and consumption in the perspective of sustainability 9. Link environmental pollution to quality of life

10. Recognize the interdependence between human activities and environmental quality
11. Become concerned about socio-economic conditions as causes for the creation and / or enhancing of environmental problems
12. Become concerned about the modern way of life at individual and social level and the impact on environmental quality
13. Examine critically the causes and effects of environmental problems on nature and on human societies
14. Examine environmental problems in the context of environmental justice and social inequalities
15. Assess the relationship between environmental quality and social inequalities
16. Evaluate the role of human activities and choices in the quality of the environment
17. Design, implement and evaluate specific interventions to educate individuals (children and adults) about the environment and sustainability in formal and non-formal education
11. Assess the relationship between environmental quality and social inequalities
12. Evaluate the role of human activities and choices in the quality of the environment
13. Suggest specific pedagogical methods for the education of people (children and adults) for the environment and sustainability in formal and non-formal education
14. Propose strategies to raise awareness of the environment and related issues
15. Describe and apply the basic principles governing educational material for the environment, environmental issues and problems in the context of modern environmental education and sustainability trends.
16. Evaluate the role of human activities and choices in the quality of the environment
17. Design, implement and evaluate specific interventions to educate individuals (children and adults) about the environment and sustainability in formal and non-formal education

General Competences

- Respect for the natural and man-made environment
- Cultivation of Sustainable Values
- Critical study of environmental problems
- Social participation
- Search, analysis and synthesis of data and information, using the necessary technologies as well
- Adaptation to new situations related to the development of environmental quality
- Making decisions to address environmental problems for the sustainable functioning of the environment and human societies
- Autonomous work
- Work in an interdisciplinary environment
- Respect for diversity and multiculturalism
- Exercise of criticism and self-criticism

- Promote free, creative and inductive thinking

(3) SYLLABUS

The module aims to analyse the most pressing contemporary environmental issues and problems including air pollution, climate change, the degradation of natural resources, energy, the greenhouse effect, the depletion of ozone layer, water pollution as well as the waste management. The students are also practice using different educational methods towards the critically analysis of the above mentioned environmental problems. They are also practice for the implementation of educational methods for integrating environmental issues in early childhood and primary education.

(4) TEACHING and LEARNING METHODS - EVALUATION

DELIVERY.	<i>Face-to-face</i>	
USE OF INFORMATION AND COMMUNICATIONS TECHNOLOGY	Presentations Movies and Documentaries Eclass E-mail Video Production by students Laboratory exercises for implementation of e-learning applications consisting of interactive learning activities addressed to early childhood (photostory / digital stories)	
TEACHING METHODS	Activity	Semester workload
	<i>Lectures</i>	39
	<i>Laboratory practice</i>	10
	<i>Fieldwork</i>	6
	<i>study and analysis of bibliography</i>	15
	<i>essay writing</i>	22
	<i>Independent study</i>	43
	<i>Course total</i>	135
STUDENT PERFORMANCE EVALUATION	Language of evaluation: Greek Methods of evaluation (weight %): 1. Written essay (70%) 2. Participation in experiential workshops, evaluation of produced material (30% gravity). Evaluation criteria of written essay:	

	<p>Content (30%): Clarity and scientific composition of language, appropriate use of terminology, relevance to the subject of personal constructs, originality</p> <p>Critical thinking (50%): Interpretation of the topic sufficient justification of opinions, appropriate argumentation, consideration of alternative views, analytical-synthetic approach.</p> <p>Structure (10%): Organization/structure/completeness of the project</p> <p>Bibliography: (10%) Adequacy and appropriateness of bibliographical references, independent source research</p>

(2) LEARNING OUTCOMES

Learning outcomes
After completing the course, students will be able to: 1) Recognize 2) Explain 3) Produce 4) Develop basic concepts of Euclidean Geometry
General Competences
1. Adapting to new situations 2. Decision-making 3. Production of new research ideas 4. Criticism and self-criticism 5. Production of free, creative and inductive thinking

(3) SYLLABUS

The aim of this course is to connect Euclidean Geometry to Empirical Geometry and its applications. In the course the following units are developed:

- Points – Lines – Planes – Space
- Half-lines – Segments – Angles
- Plane and Space figures
- Measure of length, area and volume
- Pythagorean Theorem
- Congruence – Similarity
- Vectors – Cartesian coordinate system – Line equation

(2) LEARNING OUTCOMES

Learning outcomes
<p>After completing the course, students will be able to:</p> <ol style="list-style-type: none"> 1) Classify 2) Analyze 3) Compare <p>data, mainly from social sciences, using statistical techniques and data processing packages.</p>
General Competences
<p>Students will be able to search, analyze and compile data and information using the necessary technologies.</p>

(3) SYLLABUS

The aim of this course is to make the Statistical Package JASP familiar to the students. Going further on, to make the process of statistical analysis less time consuming and

painstaking, allowing them more time to think about research design and analysis. For this course, a minimal background in Descriptive Statistics and computers, is required.

- Normal distribution
- Introduction to Hypothesis Testing – Statistical significance
- The Statistical Package JASP
- Data entry, saving data, printout
- From questionnaire to JASP
- Recoding existing variables
- Descriptive analysis for interval or scale variables
- Descriptive analysis for qualitative ordinal or nominal variables
- Crosstabulation of variables
- Correlation analysis
- t - test
- Regression analysis

(2) LEARNING OUTCOMES

Learning outcomes
<p>After completing the course, students will be able to:</p> <ol style="list-style-type: none"> 1) To distinguish different research methods and approaches. 2) To formulate and support research questions and assumptions 3) Design the methodology of a research, support decisions on, process, selection (or production) of research / experimental material 4) Carry out small-scale qualitative and quantitative surveys and present their results
General Competences
<ul style="list-style-type: none"> • Search, analysis and synthesis of data and information, using the necessary technologies • Making decisions • Autonomous and group work • Producing new research ideas • Exercise of criticism and self-criticism

- Promote free, creative and critical thinking

(3) SYLLABUS

This course is designed to introduce students to specific issues of research methodology in the field of broader educational and social research in order to understand and to be in a position to carry out a small-scale empirical study. The aim of the course is twofold: the first aim is to provide students with knowledge of the following methods of acquiring data: survey research methods, observation, research interview, questionnaire design and distribution, and content analysis. Issues involved in choosing and using any of these methods are discussed and a number of practical exercises are employed in order to familiarize the students with the material taught. The second aim is to teach students the conventions expected in a write-up of the method section. This will also include the student being able to understand and interpret the methodology presented in scientific papers and to write a research proposal.

Indicative sections of the course:

- General issues in educational research (types of educational research • fields of educational research • The educator as researcher)
- Specific research issues (sampling, randomness, representativeness • reliability and validity • triangulation, multimethod approach)
- Special research designs (the experimental methods in educational research • developmental research designs)
- Special forms of data collection techniques
- Research design and selection of data analysis methods (data coding and SPSS spreadsheets • elements of descriptive statistics • hypothesis testing – selection of statistical test)
- Results presentation techniques
- The assessment of research study
- Writing a research proposal

(2) LEARNING OUTCOMES

Learning outcomes
The specific course intends to educate undergraduate students in doing research in subjects involving the disciplines of the Department.
General Competences
Research, analysis and synthesis of data and information using the appropriate technological tools and bibliography
Autonomous work
Interdisciplinary work
Promotion of free, creative and inductive thinking
Preparation and presentation of dissertation

(3) SYLLABUS

Students enrolled in the fourth year of their studies have the option to do a diploma dissertation. The diploma dissertation is not obligatory but elective. Students may choose to do a diploma dissertation or take three additional elective courses instead. More specifically, students choosing to do a diploma dissertation are exempted from one elective course in the seventh semester and two elective courses in the eighth semester.

The dissertation involves basic research, applied research or literature survey in the disciplines of the Department. A specific dissertation is done by 1-2 students.

(2) LEARNING OUTCOMES

Learning outcomes
<p>After completing the course, students will be able to:</p> <ol style="list-style-type: none"> 1) Understand concepts related to the course content and identify their application in the field. 2) Acknowledge the need to organize the activities in the Daily Program of the Kindergarten. 3) Identify the learning contexts that form the basis for organizing the daily program. 4) Recognize the importance of the organization and appropriate pedagogical use of the physical environment of the kindergarten.

- 5) Acknowledge the link between high quality of the physical environment and positive learning outcomes.
- 6) Identify basic criteria related to the quality of the organization and the appropriate use of the physical environment of the Kindergarten.
- 7) Organize a preschool classroom that is characterized by high quality and meets the developmental needs of preschool children.
- 8) Understand the importance of collaboration and collaboration strategies to build the organizational culture of the school.
- 9) Use collaboration strategies to promote their work.

General Competences

- Acquiring knowledge and critical thinking skills on topics related to learning and teaching in early childhood education
- Transfer of scientific meanings regarding teaching in preschool classrooms.
- Understanding the parameters of planning and implementing a teaching scenario in kindergarten.
- Implementation of educational practices and methods with reference to the child's all-round development.
- Search, analysis and synthesis of data and information, using the necessary technologies.
- Critical thinking skills
- Decision-making skills.
- Collaboration skills.
- Development of free, creative and inductive thinking on issues of development and education of preschool children.
- Reflection and self-reflection

(3) SYLLABUS

This specific course, which is part of the Practical Training and Practicum Program, focuses on the Holistic Approach of the Learning Environment in Kindergarten.

Holistic approach of the kindergarten program and learning contexts. Quality and organization of the physical environment in the kindergarten. Human and children-centered approach to space. The environment as the third teacher. Organization and pedagogical utilization of the kindergarten's natural environment in relation to the aims and objectives of the curriculum and the needs of preschool children. Basic quality criteria. The classroom space and criteria for setting up "corners" in the kindergarten. The resources of the Educational Material-Special Library. Collaboration in small groups-strategic planning and bonding techniques.

(2) LEARNING OUTCOMES

Learning outcomes
<p>After completing the course, students will be able to:</p> <ol style="list-style-type: none"> 1) Distinguish the aims and objectives of preschool education. 2) Define the learning goals of a teaching scenario. 3) Understand the parameters of planning and implementing teaching scenarios in kindergarten. 4) Observe a teaching scenario in a Kindergarten classroom and redesign it, reflecting critically.

- 5) Recognize the appropriateness of observation as a method of data collection in the preschool age.
- 6) Understand basic concepts related to observation.
- 7) Recognize the importance of preparation for observation.
- 8) Make use of research tools (observation protocol) in the educational practice.
- 9) Distinguish observation from induction/interpretation.
- 10) Utilize techniques and practices to promote literacy-related skills.
- 11) Make use of scaffolding tools (e.g., a doll, an object) to enhance understanding and assimilation of concepts and to achieve goals set for children in various learning contexts.

General Competences

- Acquiring knowledge and critical thinking skills on topics related to learning and teaching in early childhood education
- Transfer of scientific meanings regarding teaching in kindergarten.
- Understanding the parameters of planning and implementing a teaching scenario in kindergarten.
- Implementation of educational practices and methods with reference to the child's all-round development.
- Respect towards diversity and multicultural values.
- Inclusive perspective of education.
- Search, analysis and synthesis of data and information, using the necessary technologies.
- Critical thinking skills
- Decision-making skills.
- Collaboration skills.
- Development of free, creative and inductive thinking on issues of development and education of preschool children.
- Reflection and self-reflection
- Practice of observation skills.
- Familiarization with observation recording techniques.
- Cultivation of the ability to critically evaluate and utilize ready-made observation tools.

(3) SYLLABUS

This specific course, which is part of the Practical Training and Practicum Program, focuses on the Holistic Approach of the Learning Environment in Kindergarten. Emphasis is placed on the processes and methodologies related to instructional design, highlighting the importance of Observing the children in

order to enhance the reflective perspective for improving the educational process through continuous revision of the teaching work to promote its effectiveness. A significant aspect of the kindergarten program is the approach to language through the pedagogical utilization of children's literature.

Regarding instructional design, the basic parameters are: (a) Distinction of the educational aims and objective, (b) Pedagogy through goals and guided teaching approaches, (c) The learning outcomes in the context of the implementation of the new curriculum for the Kindergarten, (d) The emerging goals and the possibilities of their utilization in the kindergarten classroom.

More specifically, the parameters of designing organized and spontaneous activities in kindergarten are analyzed, with emphasis on the role of the teacher in the planning and implementation process to ensure a balance between what originates from the children and what from the teachers. In this context and within the framework of the inclusive perspective of preschool education, practices are developed that concern inclusive learning, with emphasis on the principles of educating children with disabilities and/or learning difficulties or special needs, while emphasizing the use of the doll as an important scaffolding tool to support the needs of all children within the context of playful learning.

In the section 'Good Practices in Reading Children's Books', established literacy theories are combined with applications to cultivate attractive reading practices for preschool children. The book is studied as a material object, as content, and as a field where language, storytelling, and visual exploration meet. In this context, the section equips teachers with interactive techniques and tools to create enriched literary experiences, providing the capability to become proficient storytellers and to lay the foundations for a lifelong love of reading.

In the context of Observation as a formative assessment tool, the advantages and disadvantages of observation as a scientific tool are discussed, and the necessity of observation as a means of data collection in preschool age is documented. Types of observation are presented: in terms of the degree of the observer's participation, in terms of the use of techniques and means, as well as techniques for recording observation data.

(7) LEARNING OUTCOMES

Learning outcomes
<p>After completing the course, students will be able to:</p> <ol style="list-style-type: none"> 1) discern the concepts of music education 2) compare key points of musical education systems and theories 3) design courses of song teaching for children and musical concepts and structures 4) perform songs for children correctly and with good quality 5) accompany rhythmically and melodically (sometimes) with simple percussion instruments a child's song 6) be able to teach (in a variety of ways) a child's song 7) develop the ability of good reading and writing music and basic elements of music theory and history, and make improvised musical instruments and use them
General Competences
<ul style="list-style-type: none"> • Understanding and interpreting scientific theories and concepts from the field of educational sciences

- Transfer of scientific concepts to pre-school children.
- Implementation of educational practices and methods with reference to the child's all-round development.
- Autonomous work
- Teamwork
- Respect for diversity and multiculturalism
- Respect for the natural environment
- Exercise of criticism and self-criticism
- Promote free, creative and inductive thinking

(8) SYLLABUS

The specific course of the Practicum concerns music. More specifically, it includes the following:

- Theories and perceptions of the most important music educators (C. Orff, Z. Kodaly, E. J. Dalcroze, etc.), the content of their systems in detail and their application in pre-school education through musical activities based on this.
- Parallel learning of children's songs (Greek and non-Greek) using mainly melodic percussion instruments, flute, rhythm instruments, piano accompaniment. Ways of teaching them to children in kindergarten. Exemplary Classroom and DVD Teaching.
- Construction of improvised musical instruments (Sieves, maracas, drums, bells, guitars, flutes, trumpets, tambourines, etc.) with simple materials (plastic bottles, paper boxes, pots, rubbers, balloons, canes, seeds and fruits, colored paper and cardboard etc.). Accompanying children's songs with the above improvised musical instruments.
- Introduction to the theory and history of music as well as the most basic musical forms.

(2) LEARNING OUTCOMES

Learning outcomes
<p>After completing the course, students will be able to: make puppets using a diversity of materials in many ways. They will be also able to create novel stories with themes related to the kindergarten and primary school children's interests. Additionally they can organize short puppetry events using the techniques of encouragement they have been taught. In addition, they will be able to apply the knowledge and techniques of artistic creations to the pupils, to understand the importance of child expression through drawing and painting, as well as through any creative activities.</p> <p>To become creative and open minded to all activities that relate with the Arts and Culture, to be active observers at any artistic expositions and cultural activities. To become more social, to cooperate and communicate through non-verbal communication that Art offers. Students will be able to express themselves in artistic terms, to analyze, compose and</p>

choose the exact artistic and supervisor tools (color, fabric, pictures and paintings, drawings) so as to make their pupils connect with the natural world, the language and their own feelings. Students will also understand that art and the artistic expression is an important way of expression and communication between people, but also a tool of acquisition and consolation of knowledge. Lastly, they will be capable of making their own artistic creations being inspired by different eras and artistic streams and to put them in the teaching process of mathematics, language, environmental studies, etc. (interdisciplinarity).

General Competences

Production of free creative thought, activation of imagination, grouping and collaboration as well as autonomous work. Acquisition of theoretical and practical base so that the student can apply this knowledge to the framework of preschool culture and education.

(3) SYLLABUS

The specific course of the Practicum consists of two modules: (a) Puppet Theatre for Children and (b) Aesthetic Education I. More specifically, it includes the following:

Puppet Theatre for Children

Through the combination of theory and practice, the following are covered:

Kinds of shows for children. Theater for children in Greece and the relationship of theatrical texts with their era. From text to performance: theatre techniques and their implementation, role analysis, rules and codes of theatre texts. Recordings of performances. Puppet Theater - Shadow Theater.

Expression and creativity through theatre activities, imitation and pantomime, voice exercises and breathing techniques, improvisation and role play, creating the scenery for an action, making puppets.

Aesthetic Education I

By following an experimental and playful action, the lesson is an introduction to the basic elements of the artistic conformation (point-line-shape-level-color-space-synthesis) that aims to the knowledge of the alphabet of the artistic language and to the ability to create original artistic creations.

The contact of the students with important artistic streams and creations made in different eras of history, offers them knowledge and examples of the use of the Artistic Language in different eras. The experiential approach offers a direct contact, interpretation and understanding and works as a source of inspiration for their own artistic creativity.

Students will not only acquire skills through their contact with different painting techniques, tools and other means of craft but also ways they can organize their work and create a drawing lab in the classrooms and tools that will help them succeed in their teaching

practice.

The module also focuses on the understanding of the language of paintings and the ways children express themselves through drawings that shape up during their childhood and make us understand their feelings and thoughts.

(4) TEACHING and LEARNING METHODS – EVALUATION

(2) LEARNING OUTCOMES

Learning outcomes
<p><i>Holistic Approach to the Learning Environment in Kindergarten</i></p> <p>After completing the course, students will be able to:</p> <ul style="list-style-type: none"> • Understand concepts related to the course content and identify their way of application in the field. • Acknowledge the need to organize the activities in the Daily Program of the Kindergarten. • Identify the learning contexts that form the basis for organizing the daily program. • Recognize the importance of the organization and appropriate pedagogical use of the physical environment of the kindergarten. • Acknowledge the link between high quality of the physical environment and positive learning outcomes. • Identify basic criteria related to the quality of the organization and the appropriate use of

the physical environment of the Kindergarten.

- Arrange a preschool classroom that is characterized by high quality and meets the developmental needs of preschool children.

Aesthetic Education II

- Design, organize and implement an interdisciplinary visual art course in kindergarten.
- Recognize, exploit and apply in school special techniques using materials and tools for the teaching of visual arts.
- Observe, describe, analyze and interpret a piece of artwork, to compare it with others, comprehend and describe the differences and similarities in order to exploit it in classroom.
- Design, organize and implement a course about artwork in an experiential way.
- Recognize the evolution phases of child design and its communication aspect as well as the value of visual expression for the comprehensive and balanced development of the child's personality in practice.

General Competences

- Acquisition of critical thinking knowledge and skills on issues related to the learning and teaching of pre-school students.
- Transfer of scientific meanings in preschool teaching classes.
- Understanding the parameters of planning and implementing an activity in kindergarten.
- Implementation of educational practices and methods with reference to the child's development.
- Respect towards diversity and multicultural values.
- Search, analyze and synthesize data and information, using the necessary technologies
- Critical thinking skills.
- Decision-making skills.
- Team-working skills.
- Production of free, creative and inductive thinking on issues of development and education of preschool children.
- Criticism and self-criticism

(3) SYLLABUS

The specific course of the Practicum consists of two modules: (a) Holistic Approach to the Learning Environment in Kindergarten and (b) Aesthetic Education II. More specifically, it includes the following:

(A) Holistic Approach to the Learning Environment in Kindergarten

Holistic approach to kindergarten programming and learning contexts.

Quality and organization of the physical environment in the kindergarten. Human-centered approach to space. The environment as the third teacher. Organization and pedagogical utilization of the kindergarten's natural environment in relation to the aims and objectives of the curriculum and the needs of preschool children. Basic quality criteria. The classroom space and criteria for setting up

“corners” in the kindergarten.

Aesthetic Education II

Aesthetic Education II is experiential. It involves the acquisition of practical knowledge, skills and abilities aiming at personal and professional development. The purpose is to acquaint students with aspects of visual art teaching in kindergarten.

More specifically, it includes the following:

1. Introduction: Processing of basic questions. What is the role and the significance of teaching art courses and specifically visual arts in kindergarten? What is the purpose of the course and the goals for the semester? What is creativity? How expression through art and the enhancement of creativity contributes to other teaching subjects? What does an interdisciplinary approach involve? How is it implemented? How can one design, organize and implement an interdisciplinary visual arts course? Acquaintance among the members of the group.
2. Experiential laboratory about the exploitation of paper: The mask and its role in civilization. Construction of a mask for the eyes and half of the face. Construction of a mask for the whole face. Presentation of examples from other artifacts involving the Carnival.
3. The evolution of sketch language from the toddler to the teenager. PowerPoint presentations are used to show sketches and paintings of children according to bibliographic references. Experiential laboratory: Design, structure, organizations and implementation of a course involving the stencil technique. Interdisciplinary goals and exploitation in the educational unit.
4. *The significance and the role of children’s sketch and painting.* The “messages” the paintings convey. The psychotherapeutic dimension of creative expression. Reference to therapy through art and the ability to recognize peculiarities through child sketches. Experiential laboratory: Design, structure, organization and implementation of a course involving the engraving technique with oil pastel. Interdisciplinary goals and exploitation in the educational unit.
5. A look back at important stations in the history of art from Antiquity to the present day. Important artists and artistic currents with emphasis on the 19th and 20th century. Search for “my favorite artist” and “my favorite artwork” for the experiential approach (semester project). Notes of the tutor and documents in e-class are used.
6. *Experiential laboratory:* Methodology of experiential approach to artwork using as examples nine pieces of artwork of important artists and representatives of artistic trends offered as visual material in the notes of the tutor and e-class documents. Interdisciplinary exploitation of artwork in the educational unit.

(2) LEARNING OUTCOMES

Learning outcomes
<p>After completing the course, students will be able to:</p> <ol style="list-style-type: none"> 1) distinguish the aims and objectives of preschool education. 2) define the learning goals of a teaching scenario. 3) understand the parameters of planning and implementing teaching scenarios in kindergarten. 4) design and implement a teaching scenario in a kindergarten class. 5) create the appropriate supportive framework for the work of kindergarten children in small groups in spontaneous and organized activities. 6) understand basic concepts related to observation

- 7) recognize the appropriateness of observation as a method of data collection in preschool age
- 8) distinguish observation from induction/interpretation
- 9) recognize the importance of preparation for observation

General Competences

- Acquisition of critical thinking knowledge and skills on issues related to the learning and teaching of pre-school students.
- Transfer of scientific meanings in preschool teaching classes.
- Understanding the parameters of planning and implementing a teaching scenario in kindergarten.
- Implementation of educational practices and methods with reference to the child's development.
- Respect towards diversity and multicultural values.
- Search, analyze and synthesize data and information, using the necessary technologies
- Critical thinking skills.
- Decision-making skills.
- Team-working skills.
- Production of free, creative and inductive thinking on issues of development and education of preschool children.
- Criticism and self-criticism

(3) SYLLABUS

The specific course of the Practicum consists of three modules: (a) Observation of the Child, (b) Development process of a teaching scenario in the Kindergarten and (c) Literary books in the Kindergarten. More specifically, it includes the following:

A) *Observation of the Child*

Distinction of random / intuitive - scientific observation. Advantages and disadvantages of the observation as a scientific tool. Documentation of the necessity of observation as a data collection tool in preschool age. Advantages of systematic observation over randomness in relation to the educational work and its link with the role of the teacher as a researcher in his class. Types of observation: The degree of participation of the observer. The use of technical means. Techniques to record the observation data. Experimental (via video scenes from public kindergartens) use of recording techniques, as determined by the purposes of the observation.

Experimental labeling of what is observed. Analysis, through examples, of the qualities of the documenting language.

B. Development process of a teaching scenarios in the Kindergarten

Distinction of the educational aims and objectives. Pedagogy through goals and guided teaching approaches. The learning outcomes in the context of the implementation of the new curriculum for the Kindergarten. The emerging goals and the possibilities of their utilization in the kindergarten classroom. Definition and necessity of planning free play and teaching scenarios in the kindergarten. Methodology of free play and teaching scenarios (the "what" and the "why" of an activity). The environment for free play and teaching scenarios and pedagogical material. The intended knowledge and skills. The role of the teacher in the process of planning and implementing a teaching scenario. The parameters of the designing. The evolution of a teaching scenario through examples. Students in small groups design and present a teaching scenario.

C. Literary books in the Kindergarten

The para-text of picture-books: size, shape, covers, frames .The relations between words and pictures. Ideological dimensions of pictures and of picture-books.

Reading of selected picture-books in class: the dialectical relation between the pictures and their reader. Playing with picture-books e.g. put the pages in an order. Imagine a different ending. Find a proper title for the story.

(7) LEARNING OUTCOMES

Learning outcomes
After completing the course, students will be able to: 1) Integrate principles of intercultural education into educational programs. 2) Translate national physical activity guidelines and design and implement appropriate programs to achieve those guidelines.
General Competences
<ul style="list-style-type: none"> Acquisition of critical thinking knowledge and skills on issues related to the learning and teaching of pre-school students. Transfer of scientific meanings in preschool teaching classes. Understanding the parameters of planning and implementing an activity in kindergarten.

- Implementation of educational practices and methods with reference to the child's development.
- Respect towards diversity and multicultural values.
- Search, analyze and synthesize data and information, using the necessary technologies
- Critical thinking skills.
- Decision-making skills.
- Team-working skills.
- Production of free, creative and inductive thinking on issues of development and education of preschool children.
- Criticism and self-criticism

(8) SYLLABUS

The specific course of the Practicum consists of two modules: (a) Handling Cultural Diversity in the Classroom and (b) Physical Activity and Health in Early Childhood Education. More specifically, it includes the following:

A) Handling Cultural Diversity in the Classroom

During this seminar students review the principles of intercultural education. Then, are given specific directions on the issues of communication with non-Greek speaking children and the teaching of Greek as a second language, as well as directions on how to engage non-Greek speaking and foreign children in school celebrations and festivities.

B. Physical Activity and Health in Early Childhood Education

Students will learn about the importance of intervening with a physical activity intervention in the preschool years and to take care for an environment as an appropriate and amenable target for such intervention. Students will also review the prevalence of physical activity, sedentary behavior and obesity in the preschool population and the impact that these lifestyle behaviors and conditions have on the health of preschool aged children.

(2) LEARNING OUTCOMES

Learning outcomes
After completing the course, students will be able to: <ul style="list-style-type: none"> 1) distinguish the aims and objectives of teaching scenarios in formal educational settings in preschool age. 2) understand the design and implementation parameters in a daily educational program for preschool children. 3) design, implement, evaluate and reflect a daily educational program in a kindergarten class and in alternative informal learning environments.

- 4) create the appropriate supportive framework for the work of kindergarten children in small groups.

General Competences

- Acquisition of critical thinking knowledge and skills on issues related to the learning and teaching of pre-school students.
- Transfer of scientific meanings in preschool teaching classes.
- Understanding the parameters of planning and implementing a teaching scenario in formal (kindergarten class) educational setting.
- Implementation of educational practices and methods with reference to the child's development.
- Respect towards diversity and multicultural values.
- Search, analyze and synthesize data and information, using the necessary technologies
- Critical thinking skills.
- Decision-making skills.
- Team-working skills.
- Production of free, creative and inductive thinking on issues of development and education of preschool children.
- Criticism and self-criticism

(3) SYLLABUS

The specific course of the Practicum concerns the design, implementation, reflection and assessment of a daily educational program in formal learning settings (kindergarten class) using the Lesson Study (LS) model for teachers' professional development. More specifically, it includes the following:

The design, implementation and assessment of a daily program in the Kindergarten. The role of the teacher as an facilitator in the process of planning and implementing free play and teaching scenarios.

Moreover, students will approach the theoretical framework of Lesson Study model, as documented in international literature and is proposed for the education of pre-service teachers as well as the professional development of in-service. Throw experimental applications in small groups, conceptual definitions, purpose and approaches of reflection are being introduced to the students giving an emphasis on the reflective-critical teacher and reflective practices.

Students in small groups follow the strategies of the model's application in the basic phases in a three day program in public schools (kindergarten): a) collaborative planning of objectives of two daily programs, b) implementation - observation, c) reflection - feedback, d) redesign one of the two daily programs and reimplementation.

(2) LEARNING OUTCOMES

Learning outcomes
<p>After completing the course, students will be able to:</p> <ol style="list-style-type: none"> 1) recognize and understand the basic principles of a project based learning following the cross-thematic approach to knowledge. 2) understand the Project Method. 3) design, implement and evaluate a project in a kindergarten class. 4) understand the principles of teamwork and apply team working strategies in the design and implementation of a project. 5) reflect on and improve their teaching strategies.

- 6) understand first aid issues.
- 7) deal with accidents in the workplace.
- 8) manage issues related to basic life support and pre-hospital support of life in case of trauma.
- 9) Design, organize and manage the operation of an educational unit.
- 10) Acquaint themselves with the organization and operation of a school library.

General Competences

- Acquisition of critical thinking knowledge and skills on issues related to the learning and teaching of pre-school students.
- Transfer of scientific meanings in preschool teaching classes.
- Understanding the parameters of planning and implementing a project in formal (kindergarten class) and non-formal (museums, hospitals) educational settings.
- Implementation of educational practices and methods with reference to the child's development.
- Acquisition of knowledge and skills on first aid issues.
- Respect towards diversity and multicultural values.
- Search, analyze and synthesize data and information, using the necessary technologies
- Critical thinking skills.
- Decision-making skills.
- Team-working skills.
- Production of free, creative and inductive thinking on issues of development and education of preschool children.
- Criticism and self-criticism.

(3) SYLLABUS

The specific course of the Practicum consists of the following modules: (a) The Project Method in the Kindergarten, (b) Tutorial on Hazards and Accidents and (c) Organization and Management of the Educational Unit. More specifically, it includes the following:

A) The Project Method in the Kindergarten

Cross-thematic approach to knowledge in kindergarten and its conceptual delimitation. Theoretical basics and fundamentals of a project based method. Structure and duration of a project. Project and the involvement of the community. Evaluation in the context of a project. Implementation of a project in Kindergarten through examples. Group collaborative teaching in the implementation of a project. The operation of small working groups in Kindergarten. The reasons that dictate this form of work in the context of a project. Requirements for working in small groups. General principles of organizing small groups as "workshops" in Kindergarten.

Students are divided into groups to design, implement, evaluate and reflect on a project in a kindergarten class lasting 90 days.

B) Tutorial on Hazards and Accidents

The tutorial is aimed at the students of the pedagogical departments in order to inform them on first aid issues and to enable them to deal with accidents in the workplace, especially in relation to their students.

Simultaneously, it helps them to calmly deal with accidents at home and on holidays and teaches them the necessary actions in the event of an emergency. The purpose of the tutorial is to prepare

the students, through the knowledge and skills they will acquire, to properly address and manage issues related to basic life support and pre-hospital support of life in case of trauma. The training will be essentially of a practical nature with the application of relevant algorithms and protocols. It will be carried out with the help of modern training manikins designed for this purpose and will be completed in 6 three-hour thematic modules, in which the presence of the students will be compulsory. The final module will evaluate the knowledge acquired by the trainees, who will be required to deal with scenarios related to the recognition, assessment and management of emergencies. Upon successful evaluation, the student gets a degree and receives a certificate from the Department's Administration Office.

C) Organization and Administration of the Educational Unit

Designing and detailed description of the phases of organizing and operating an educational space and organizing a pre-school educational space with priority to its financial and administrative activities and functions.

C1) Organization of the School Library

This course analyzes the objectives of a well-organized (pre)-school library. It presents the space or spaces required and the way in which it will be created, the assembly of the material collected by the staff, the organization of the material according to the Decimal Classification System Melvil Dewey and finally the Operating Rules of the Library.

Foreign Languages (Ξ)

The qualitative upgrading of the teaching of foreign languages at University is now an imperative necessity given the new conditions that arise in Greek and international reality. Firstly, the need for the university community to connect with the international environment and its opening to the international community, the existence of European exchange programs for students and teachers and, furthermore, professional and personal mobility within the European Union (and beyond) as well as intercultural contacts and mutual understanding require that a program for the teaching of foreign languages at the modern university be redesigned and re-targeted.

On the other hand, the European Union's ambitious yet realistic goal of "mother tongue plus two", the introduction of a second foreign language in Greek primary schools and the introduction of a foreign language in kindergartens are new data to be taken into account.

On this basis, the Department of Education Sciences In Early Childhood has designed a language teaching system that has the following objectives:

1. Promote multilingualism: since students have been taught a foreign language, some of them a second foreign language prior to their admission to University, they may, if they so wish, choose the second foreign language for which they have lower level certificate and improve it.
2. Enrich their knowledge in the language they already know. This is achieved by monitoring four consecutive semesters, which have classified difficulty.
3. Increase communication skills in the language they are taught.
4. Cultivate respect for diversity and linguistic and cultural diversity through the language learning.

Based on the above objectives, foreign language teaching must respond to the Department's needs, whether it concerns the language students already know or the language they have the lowest level. That is, foreign language courses should aim to familiarize students with the terminology associated with the subjects taught in the Department (pedagogy, linguistics, psychology, literature, sociology, etc.) so that they can use Internet information, read a simple scientific text or a brochure or instructions for various types of pedagogical material.

The objectives of the language teaching system are implemented through the use of modern audiovisual and electronic technologies and innovative teaching methods (e.g. action plans). Two foreign languages are currently offered: English and French. The teaching of French is subject to the availability of a corresponding tutor. For admissions until 2016-17, three foreign languages were offered: English, French and German.

(2) LEARNING OUTCOMES

Learning outcomes
<p>A general and final purpose of the English as a Foreign language course in the Dept. is the <u>revision and exercise of the basic language structures</u>, familiarization of the students with the language of their specialty so that they acquire the language skills that will allow them to comprehend English texts relevant to the context of their studies as well as assist them to compose academic texts as an ultimate purpose. Another aim of the course is to gradually prepare students of the Dept. to acquire general and special communicative skills like conference attendances, oral presentation of small academic papers in group work. After the successful completion of the course students will be able to :</p> <ol style="list-style-type: none"> 1)Recognize language structures and terminology relevant to Education Sciences. 2)To fully develop their internet navigation skills regarding their specialty 3)To develop oral skills in regard to Education Sciences. 4)To develop audio listening comprehension of lectures, speeches and seminars in English.
General Competences
<ul style="list-style-type: none"> • <i>Development of reading and comprehension techniques of specialized English texts</i>

as well as navigating techniques for finding general and special input.

- Development of specialized vocabulary and terminology in the disciplinary field of Education sciences.
- Extracting and composing a variety of references from internet, books and journals.
- Perfection of communicative language functions.
- Improvement of academic writing skills.
- Development of group work and critical thinking.

(3) SYLLABUS

The course's syllabus contains specialized English texts in the disciplinary field of Education And especially in early childhood education through a combination of references, a course book and lecture notes.

Throughout the duration of the four semesters familiarization of the students in different in a variety of education fields. More specifically the specific course is devoted on developing their academic language skills.

Introduction to academic language (lecture notes)

Mission IELTS 2 Academic Student's Book, Obee Bob, Spratt Mary, Express Publishing.

During the lectures students learn basic language academic structures, analyze and process specialized texts and attend special video course as close to their studies as possible.

(4) TEACHING and LEARNING METHODS - EVALUATION

DELIVERY	Face-to face	
USE OF INFORMATION AND COMMUNICATIONS TECHNOLOGY	PowerPoint Eclass Email Attending video, Internet tools intended for their familiarization of special vocabulary and terminology ie. <i>Just the word, SKELL.</i>	
TEACHING METHODS	Activity	Semester workload
	Lectures	39
	Fieldwork	26
	Essay writing	15

	Independent study	60
	Course total	135
STUDENT PERFORMANCE EVALUATION	Language of evaluation: <i>English</i> Methods of evaluation: <ul style="list-style-type: none"> Written exam (100%) Additionally, students who were not able to attend lectures, are also examined orally.
